Australian ITAD staffing comparison — Dubbo branch shortlist

Research date: 2 October 2026 (AEST)

Purpose

This file takes the broader Australian IT asset disposition (ITAD) / refurbishment comparison and filters it to companies that have public evidence making a Dubbo branch, regional hub, secure satellite facility or regional operating presence genuinely plausible.

The screen is intentionally stricter than "does this company do e-waste?"

To stay on the shortlist, a company needed at least one of:

1. multiple physical Australian ITAD/processing locations;
2. documented branch/facility expansion;
3. explicit service coverage across regional Australia supported by a logistics/facility network;
4. public national-expansion intent plus a business model that could sensibly support a Dubbo pilot;
5. current growth/acquisition activity specifically expanding ITAD capability.

Important limitation:

Nobody on this list has publicly announced a Dubbo branch.

"Shortlisted" means there is public evidence that a regional physical presence is credible enough to investigate. It does not mean the company has decided to open in Dubbo.

1. Staffing correction

Fliptech does not have a verified public headcount of 11.

Its current LinkedIn company page says:

Company size: 11–50 employees

LinkedIn lists individual people associated with the company, but that is not a payroll count.

So throughout this file:

- a LinkedIn employee band is reported as a band;
- an exact company-reported count is identified separately;
- LinkedIn "view all employees" numbers are treated only as public-profile counts, not payroll.

Source:

<https://au.linkedin.com/company/fliptech-australia>

2. Retained Dubbo expansion shortlist

Company | Public staffing signal | Current physical expansion evidence | Why it remains a Dubbo candidate

Fliptech Australia | 11-50 LinkedIn band; exact count unknown | Brookvale currently; historic national expansion ambition; later nationwide clients; active enterprise growth | Smaller company, but the exact ITAD/reuse model matches the local gap and a Dubbo pilot/hub is more plausible than a full branch initially

G1 Asset Management | 11-50 LinkedIn band; one LinkedIn surface showed ~20 profiles | Processing facilities in Brisbane, Sydney, Canberra and Melbourne; says it services all Australian metro and regional areas | Strong evidence that a relatively small specialist ITAD firm can support multiple secure facilities and regional clients

Renew IT | 51-200 LinkedIn band; company has also publicly said 200+ professionals | NSW, WA and VIC facilities; current site says drop-off points in all major Australian capital cities; international expansion | Clear precedent for building multiple depots/facilities and processing corporate refresh equipment at scale

Greenbox Group | 51-200 LinkedIn band | Brisbane, Sydney, Canberra and Melbourne facilities; historical branch expansion; explicit partner program; historical regional roadshows | One of the strongest branch precedents; has repeatedly added facilities and has previously taken refurbished computers into regional centres

WV Technologies | 51-200 LinkedIn band; current LinkedIn surface showed 61 public profiles | Locations in ACT, NSW, QLD, VIC and WA | National physical footprint plus buyback, sanitisation, refurbishment/remarketing and government/enterprise focus

Shred-X | 201-500 LinkedIn band | 11 facilities nationally, including three NSW locations; explicitly services regional NSW | Already uses a distributed branch/facility model and is actively growing e-waste/ITAD services

Iron Mountain / former ACT Logistics | ACT Logistics was 51-200 with ~56 public profiles before acquisition; Iron Mountain is a very large global company | ACT Logistics had Brisbane, Sydney and Melbourne operations; Iron Mountain acquired it in 2025/26 and is actively expanding Asset Lifecycle Management in Australia/APAC | Large-company option with current acquisition-led ITAD growth and an established Australian multi-site footprint

3. Fliptech Australia

Staffing

Current LinkedIn:

- 11-50 employees
- Brookvale headquarters
- exact staff count not public.

Source:

<https://au.linkedin.com/company/fliptech-australia>

Why keep it despite having one public site

Fliptech is the exception to the "existing multi-site network" rule because it has several other signals:

- Austin Turpin publicly discussed scaling nationally as early as 2020;
- later media described nationwide clients;
- it is currently hiring for enterprise business development;
- its model includes hardware buybacks, data sanitisation, refurbishment, official resale, donation and recycling;
- it has a rural-NSW social connection through Royal Far West;
- NSW Government currently promotes Dubbo itself as an e-waste investment location.

Dubbo form that makes sense

Not: immediate full Brookvale clone.

More credible:

1. regional account-development pilot;
2. scheduled secure collection runs;
3. secure aggregation point;
4. approved local ITAD/triage partner;
5. full regional processing facility only if volume proves it.

Detailed analysis:

- FLIPTECH-DUBBO-BRANCH-FEASIBILITY.md

4. G1 Asset Management

Staffing

Current LinkedIn:

- 11-50 employees;
- another current LinkedIn regional surface exposed roughly 20 associated public profiles.

The 20-profile number is not a payroll count.

Source:

<https://au.linkedin.com/company/g1-asset-management>

Physical network

Current G1 site identifies secure processing facilities in:

- Brisbane / Yatala — HQ
- Sydney / Wetherill Park
- Canberra / Fyshwick
- Melbourne / Tullamarine

Source:

<https://g1.com.au/contact/>

G1 also says:

Servicing All Australian Metro and Regional Areas

with dedicated facilities and a national logistics network.

Source:

<https://g1.com.au/>

Why this matters

G1 is one of the strongest staffing comparisons for Fliptech.

A specialist business in the same 11-50 LinkedIn band as Fliptech is already operating multiple secure facilities across eastern Australia.

That does not prove G1 wants Dubbo.

It demonstrates that:

a specialist ITAD company does not need hundreds of employees before multiple facilities become operationally possible.

Dubbo proposition

G1 could potentially view Dubbo as:

- western NSW collection hub;
- secure regional consolidation point;
- satellite processing location if volume warrants.

It is also a current NSW Government Contract 9826 standalone disposal-service supplier.

Source:

<https://www.info.buy.nsw.gov.au/contracts/ict-end-user-devices-and-services>

5. Renew IT

Staffing

Current LinkedIn:

- 51-200 employees.

Renew IT's own founder/company material has also described:

- 200+ professionals.

Those two public signals use different methodologies/timeframes; neither should be silently converted into an exact current payroll total.

Sources:

- <https://www.linkedin.com/company/renewitgroup>
- Renew IT company/founder material.

Physical network

Renew IT currently publicly identifies Australian locations including:

- Lane Cove West, NSW
- Canning Vale, WA
- Dandenong South, VIC

Its international page also says it provides:

- asset drop-off points in all major capital cities around Australia.

Source:

<https://renew-it.com/international/>

LinkedIn has also exposed additional Australian location entries including ACT, Queensland and Tasmania, while Renew IT's own current contact page directly lists NSW/WA/VIC primary Australian facilities.

Use the company website as the higher-confidence location source.

Why keep it

Renew IT has direct evidence of:

- facility expansion;
- depot model;
- national logistics;
- corporate asset buyback;
- NIST erasure;
- refurbishment/resale;
- material processing innovation.

A Dubbo operation would be small relative to Renew IT's current network, but there is a real precedent for regional/capital-city satellite capacity.

6. Greenbox Group

Staffing

Current LinkedIn:

- 51-200 employees.

Source:

<https://au.linkedin.com/company/greenbox-group>

Physical network

Current Greenbox locations include:

- Brisbane;
- Sydney;
- Canberra / Queanbeyan;
- Melbourne;
- Auckland;
- Christchurch;
- Wellington NZ.

Source:

<https://www.greenbox.com.au/contact/>

Greenbox says:

- all Australian facilities are DISP approved;
- service capacity spans nationally.

Source:

<https://www.greenbox.com.au/faqs/>

Historical expansion evidence

This company has unusually strong "would add a branch/facility when justified" evidence.

Greenbox's own history records:

- expansion into Sydney and Melbourne;
- a Canberra facility opened for major Defence work;
- branch relaunches/relocations;
- acquisition-led expansion into New Zealand.

It also historically operated regional Queensland roadshows selling used computers and laptops into regional centres.

Source:

<https://www.greenbox.com.au/about/>

Greenbox currently operates a formal industry partnership program for OEMs, systems integrators and global asset-management partners.

Source:

<https://www.greenbox.com.au/partners/>

Why keep it

Among all candidates, Greenbox has one of the clearest public histories of:

- adding facilities;
- servicing sensitive enterprise/government clients;
- using partnerships;
- deliberately taking refurbished devices to regional markets.

That makes a western NSW node at least structurally compatible with how the company has grown before.

7. WV Technologies

Staffing

Current LinkedIn:

- 51-200 employee band;
- a current LinkedIn regional page exposed 61 associated public profiles.

Again, 61 is not a payroll total.

Sources:

- <https://au.linkedin.com/company/wvtechnologies>
- other LinkedIn regional renderings of the same company page.

Physical network

LinkedIn currently lists:

- Fyshwick, ACT;
- Mona Vale, NSW;
- Zillmere, QLD;
- Coolaroo, VIC;
- Welshpool, WA.

Source:

<https://au.linkedin.com/company/wvtechnologies>

Service match

WV provides:

- secure IT asset disposal;
- Top Secret-capable data destruction;
- device sanitisation;
- asset buyback;
- grading/refurbishment/remarketing;
- e-waste recycling;
- component recovery;
- ESG/social procurement reporting.

Source:

<https://wvtech.com.au/solutions/>

WV's Buy NSW profile says it is:

- Aboriginal-owned;
- an SME;
- a social enterprise;
- a national ICT disposal/destruction/e-waste provider.

Source:

<https://buy.nsw.gov.au/supplier/profile/2987>

Why keep it

WV already supports a genuinely distributed Australian physical network.

A Dubbo location would fit the same national-regional operating logic better than it would for a single-city boutique refurbisher.

Its Indigenous employment/social-procurement model may also fit western NSW government/enterprise procurement in ways pure recyclers cannot.

8. Shred-X

Staffing

Current LinkedIn:

- 201-500 employees.

Source:

<https://au.linkedin.com/company/shred-x-pty-ltd>

Physical network

Shred-X currently says it has:

- 11 NAID AAA-certified facilities/operations across Australia.

Current NSW presence includes:

- Wetherill Park;
- Warragamba;
- Warabrook / Newcastle.

Sources:

- <https://www.shred-x.com.au/contact/>
- <https://www.shred-x.com.au/location/new-south-wales/>

Its NSW page explicitly says it services:

metropolitan and regional NSW.

ITAD relevance

Shred-X is broader than Fliptech because it also handles document destruction and many secure waste streams.

However, it now explicitly sells:

- e-waste management;
- IT value recovery;
- data sanitisation;
- hard-drive/media destruction;
- data-centre decommissioning.

Its current LinkedIn hiring also shows active sales growth specifically in E-Waste & ITAD.

Why keep it

If the question is:

which established company has a proven habit of putting secure facilities around Australia?

Shred-X belongs on the shortlist.

The likely Dubbo proposition would be a regional secure destruction + ITAD branch, not a small refurbished-computer shop.

9. Iron Mountain / ACT Logistics

Staffing

Before acquisition, ACT Logistics' LinkedIn page showed:

- 51-200 employees;
- around 56 associated public profiles.

Source:

<https://au.linkedin.com/company/act-logistics-au->

ACT Logistics has since been acquired by Iron Mountain, so ACT should no longer be treated as an independent future branch decision-maker.

Iron Mountain's global headcount is far larger and not comparable to Fliptech's staffing band.

Australian network / acquisition

ACT historically operated from:

- Brisbane;
- Sydney;
- Melbourne.

It specialised in:

- purchasing retired ICT assets;
- sanitisation;
- secure warehousing;
- remarketing;
- ICT lifecycle services.

Iron Mountain announced the acquisition to expand its Asset Lifecycle Management capability in Australia and APAC.

Sources:

- <https://au.linkedin.com/company/act-logistics-au->
- Iron Mountain acquisition announcements.

Current Australian job material refers to:

- former ACT Logistics operations;
- ALM warehouse operations in NSW;
- active Australian ALM growth roles.

Iron Mountain Australia currently markets global-scale:

- logistics/chain of custody;
- sanitisation;
- ITAD;
- reuse/value recovery.

Source:

<https://www.ironmountain.com/en-au/services/it-asset-lifecycle-management>

Why keep it

This is not a startup-style branch candidate.

It is a large-company regional-infrastructure candidate.

Its inclusion is justified by:

- acquisition-led Australian ITAD expansion;
- existing multiple Australian sites;
- current ALM sales/growth recruitment.

A Dubbo facility would likely need an enterprise/government volume case, not a retail e-waste proposition.

10. Companies removed from the Dubbo branch shortlist

These companies can still:

- service Dubbo;
- collect from Dubbo;
- partner with a Dubbo operator;
- buy/refurbish Dubbo equipment.

They are removed only because current public evidence is not strong enough to treat opening a Dubbo physical branch/hub as a realistic near-term thesis.

Company | Public staffing signal from earlier comparison | Why removed from branch shortlist
CirculaTech | 2-10 | Very new/small; no current multi-site or branch-expansion evidence found
Multi R IT | 2-10 | Can provide ITAD, but no verified physical branch network/expansion pattern found
9R Cycle IT | 2-10 | Strong reuse/buyback model but no branch network evidence
Tech ReCall | 2-10 | WA-centred boutique operation; no east-coast branch expansion evidence found
LinkBytes | 2-10 | Valuable wholesale/refurbishment exit partner, but no branch pattern found
ITC Asset Management | 11-50 | Excellent process benchmark and regional/interstate collection capability, but current public model remains centred on one NSW secure site rather than opening branches
Excess Technology | 11-50 | Direct ITAD comparison, but insufficient public evidence of Australian branch rollout
EraseIT | 11-50 | Strong secure ITAD/remarketing, but branch expansion into regional NSW not evidenced
Interlink Asset Management | 11-50 | Relevant ITAD model, but insufficient branch-network evidence
ITSD | 11-50 | Relevant service model, but insufficient public evidence for a Dubbo physical-site thesis
Secure Computer Recycling & Disposal | 11-50 | WA-focused and no NSW branch expansion evidence found
Recycle IT Australia | 11-50 | WA-based; no public NSW branch expansion pattern found
Enable IT Recycling | 11-50 | Valuable Victorian social-enterprise model, but not a current physical-expansion candidate for Dubbo
Sircel | 11-50 public band | Operationally relevant and already has Parkes, but current administration/receivership uncertainty makes it inappropriate to shortlist for a new Dubbo branch right now
Lifecycle Plus | 51-200; company says 100+ globally | Large capable ITAD operator but current Australian processing is centred on Huntingwood NSW; it describes use of local engineers/global partners rather than an Australian branch rollout
WorkVentures | 51-200 | Important social/device-bank partner, but its current role is digital inclusion/social enterprise rather than opening commercial ITAD branches
Total Green Recycling | 51-200 | Strong WA operator; no current NSW physical expansion evidence found
Close the Loop | 51-200 public band in prior comparison | National/global service capability, but current Australian circular-solutions site structure does not show a regional NSW branch rollout model; more likely to serve via take-back/logistics
Sims Lifecycle Services | 1,001-5,000 global LinkedIn band | Huge global ITAD company with a dedicated Sydney Circular Center; no public case for adding a small Dubbo branch instead of servicing the region through existing logistics

Important wording

"Removed" does not mean:

these companies would refuse Dubbo.

It means:

there is not enough public evidence to spend research time treating a Dubbo branch from that company as a leading opportunity.

11. What the staffing comparison actually tells us

The most interesting result is not that bigger firms have more branches.

It is that G1 contradicts the assumption that a company must be large before it can operate multiple ITAD facilities.

Both Fliptech and G1 sit in LinkedIn's:

11-50 employee band

Yet G1 publicly operates processing facilities in:

- Queensland;
- New South Wales;
- ACT;
- Victoria.

That materially strengthens the proposition that Fliptech could operate:

- a small Dubbo satellite;
- partner-run hub;
- collection/aggregation facility

without first becoming a 200-person company.

The key variable is not employee count alone.

It is:

- contract volume;
- recurring regional clients;
- resale/recovery value;
- transport savings;
- data-security requirements;
- facility utilisation.

12. Strongest branch-pattern evidence

Greenbox

Best public historical evidence of:

- adding branches;
- regional roadshows;
- partner model;
- government/defence-driven facility expansion.

G1

Best proof that:

- an 11-50 employee specialist can still run several secure processing facilities.

Shred-X

Best evidence of:

- widespread physical branch footprint including regional NSW service.

WV Technologies

Best evidence of:

- five-state physical ITAD presence with a buyback/refurbishment model.

Renew IT

Best evidence of:

- depot/facility scaling from a garage-origin company into national/international operations.

Iron Mountain / ACT

Best evidence of:

- acquisition-led expansion and enterprise-scale investment in Australian ITAD infrastructure.

Fliptech

Best match to:

- the exact Dubbo reuse-first commercial concept;
- but least branch-proven of the seven.

13. Dubbo outreach order

For testing actual interest, the research now supports contacting:

1. Fliptech — because the model fit is strongest and a regional pilot could be strategically meaningful.
2. G1 Asset Management — because it is small enough to be agile but already proves the multi-facility model.
3. Greenbox — because it has the clearest history of branch/partner/regional expansion.
4. WV Technologies — because it already runs a multi-state network and has strong government/social-procurement positioning.
5. Renew IT — because it has scale, depots and a mature buyback/refurbishment model.
6. Shred-X — because it already operates NSW branches and regional coverage, although its model is broader than refurbishment.
7. Iron Mountain / ACT — because it has the resources and network, but a Dubbo branch would probably require large enterprise/government volume.

This order is a research/contact sequence, not a claim that one company would definitely say yes.

14. The most important questions to ask all seven

1. Do you currently collect IT assets from Dubbo/Central West NSW?
2. How many current regional NSW clients do you have west of the Blue Mountains?
3. Do you service them using your own fleet, freight partners or local subcontractors?
4. What monthly asset count/tonnage would justify a local secure hub?
5. Would you consider a collection/consolidation facility without full recycling processing?
6. Would you consider an authorised local operating partner?

7. Could secure data sanitisation be performed locally under your systems?
8. Which asset categories carry enough resale value to offset regional transport?
9. How much of your regional intake is typically resold/reused versus recycled?
10. What would you need to see in a Dubbo pilot before considering permanent premises?

15. Sources — retained candidates

16. Bottom line

The original staffing list was too broad for the actual question.

If the question is:

Which companies that genuinely do Fliptech-style ITAD/reuse have enough evidence that a Dubbo physical presence is worth pursuing?

the focused list is:

- Fliptech
- G1 Asset Management
- Renew IT
- Greenbox
- WV Technologies
- Shred-X
- Iron Mountain / former ACT Logistics

The most surprising result is G1:

A company in the same 11-50 LinkedIn size band as Fliptech already runs multiple Australian processing facilities.

So Fliptech's current staffing band does not by itself make a Dubbo satellite unrealistic.

The next evidence should come from direct commercial conversations, not more employee-count guessing.
