Downstream provider comparison: Dubbo E-Waste

Checked: 2 October 2026

Question: Which of the shortlisted organisations can plausibly service Dubbo, NSW, and what would Dubbo E-Waste pay?

Evidence rule: “Confirmed” means the organisation’s current public material explicitly supports the claim. “Likely” means the organisation advertises national/regional logistics but does not name Dubbo. “Unknown” requires a phone call or written quote.

Short answer

The strongest immediate lead is Ecoactiv, which explicitly lists Dubbo among its regional NSW collection areas. For quality devices and social reuse, contact WorkVentures/CircularIT and the National Device Bank. For end-of-life mixed loads, request a quote from Sircel, whose network includes regional NSW and a Parkes facility. Use MobileMuster for phones and accessories, and use Ecycle Solutions/TechCollect for eligible free recycling routes after confirming the current Dubbo drop-off or pickup arrangement.

No provider in this list publishes a complete Dubbo commercial rate card. “Free” normally means the service is funded by the NTCRS, a product-stewardship program, a council, a manufacturer, or a cross-subsidy—not that the underlying transport, sorting, data-wiping and processing costs disappear.

Comparison

Organisation | Dubbo position | What Dubbo E-Waste could use it for | Published cost or return | What still needs confirmation

Ecoactiv (<https://ecoactiv.com.au/e-waste-ntcrs-sydney/>) | Confirmed: Dubbo is explicitly listed among regional NSW service areas. | NTCRS computers, laptops, monitors, printers, TVs and broader e-waste. | Eligible NTCRS collection is free. Post-back small satchel \$59; large box \$79. Bulk, non-standard or larger loads are quoted by item, weight, size and location. | Whether a particular Dubbo load qualifies for free pickup, the minimum volume, and treatment of batteries/locked devices.

WorkVentures/CircularIT (<https://workventures.com.au/circularit/>) | Likely: national collection coverage across metropolitan and most regional Australia; Dubbo is not named. | Secure ITAD, wiping, triage, refurbishment, resale, donation and impact reporting. | No public rate card. Their model may be a charge, a rebate, a donation arrangement or a hybrid depending on residual value. | Dubbo pickup charge, minimum load, rebate basis, accepted condition and exact downstream route.

Ecycle Solutions (<https://ecyclesolutions.net.au/ewaste-recycling/e-waste-recycling-faq/>) | Likely: nationwide network and rural/remote collection events; no current permanent Dubbo site confirmed in the pages checked. | Free NTCRS drop-off or larger commercial collections. | Public NTCRS service is free. Out-of-scope or specialised pickup may incur a small fee. | Current Dubbo locator result, commercial minimum volume and fee for non-NTCRS items.

TechCollect (<https://techcollect.com.au/about-us/faqs/>) | Possible: use its current locator; Dubbo was not confirmed from the pages checked. | Free recycling of household/small-business computers, TVs, printers and related equipment. | Free to households and small businesses; funded by liable manufacturers/importers through the NTCRS. | Current Dubbo drop-off site, volume limits and whether a business load is accepted as a drop-off rather than a contracted pickup.

PonyUp for Good (<https://www.ponyupforgood.com/donate-devices>) | Possible for bulk business technology, not ordinary public drop-off. | Corporate decommissioning, data erasure, remarketing and social impact. | No public price. PonyUp says 50% of collection profits are donated to SecondBite; suitable assets may generate value rather than a disposal bill. | Whether it will collect from Dubbo, minimum business volume, asset criteria and net rebate/charge.

Renew IT (<https://renew-it.com/services/>) | Likely: advertises collections anywhere in Australia and next-day service on the eastern seaboard; Dubbo not named. | Asset buyback, secure ITAD, reuse and recycling. | No public rate card. Asset buyback may produce a payment or rebate. | Freight/pickup cost to Dubbo, minimum load, buyback valuation and data-erasure pricing.

Fliptech (<https://www.fliptech.com.au/bins>) | Unknown: building-bin service is advertised, but no public Dubbo service map or rate card was found. | Building or business e-waste bins, collection, reuse/recycling and community redistribution. | Quote required. | Whether Dubbo is inside the service area, bin rental/transport cost, minimum volume and reporting.

Good360 Australia (<https://good360.org.au/digital-divide/eoi/>) | Not primarily a waste contractor; it is a donation/refurbishment and redistribution pathway. | Good-condition laptops for digital inclusion, usually through a structured donation program. | Current program material states \$100 per device or \$150 per device plus 12 months’ data as heavily reduced program costs. Another current page

describes \$240 per refurbished laptop plus one year of data. These are refurbishment/impact costs, not ordinary recycling fees. | Which program applies, minimum lot, who pays, pickup, eligible specifications and whether Dubbo E-Waste can be a donor or recipient partner.

Good Things Australia (<https://goodthingsaustralia.org/news/creating-a-national-device-bank>) | Not a conventional recycler or pickup contractor. | Digital-inclusion partnerships, grants, community distribution and the National Device Bank network. | No public per-device donor rate. | Whether it can sponsor or refer a Dubbo collection, and the current partner eligibility process.

National Device Bank (<https://nationaldevicebank.org.au/donate-devices/>) | Likely for corporate-scale donations and national logistics; not an individual drop-off service. | Laptops, phones and tablets suitable for secure refurbishment and social reuse. | Accepts contributions of more than 50 devices from private/public organisations. No public donor fee; collection and processing are planned case by case. | Minimum specifications, Dubbo pickup economics, whether a small operator can aggregate loads, and any value return.

MobileMuster (<https://www.mobilemuster.com.au/workplaces/>) | Confirmed for its product scope: national drop-off network and free business pickup. | Mobile phones, chargers and accessories; selected stores also accept some modems, landline phones, streaming devices and wearables. | Free. Collection units, pickup and annual reporting are provided for participating workplaces. | Whether a specific Dubbo site will accept the quantity, and safe handling for loose/swollen batteries. It is not a laptop/TV route.

SK tes (<https://www.sktes.com/>) | National/global ITAD with Australian facilities listed in Sydney, Melbourne and Brisbane; no Dubbo facility. | Enterprise ITAD, data destruction, battery recycling, resale and global reporting. | No public pricing; enterprise quotation. | Whether a Dubbo load meets enterprise minimums and the full regional freight charge.

Sircel (<https://sircel.com/about/>) | Strong regional lead: national logistics, regional NSW capability and a public Parkes, NSW facility; Dubbo pickup is not explicitly guaranteed. | Mixed e-waste, secure ITAD, data wiping, triage, reuse, recycling, bins/cages and council/business collection programs. | Household council events/cages are free. Business onsite collection is often free depending on location; recycling costs vary by material and service. | Dubbo freight, minimum load, batteries/whitegoods, data-erasure scope, buyback and whether Parkes is the receiving site.

What “cost” means for the pilot

There are four different commercial outcomes and they should not be mixed in the pilot tracker:

1. Free stewardship route: Ecoactiv, Ecycle, TechCollect and MobileMuster may be free when the item and quantity fit their funded program.
2. Quote-only disposal: Sircel, WorkVentures, Renew IT, Fliptech, SK tes and PonyUp may charge, waive, or rebate depending on volume, condition, data requirements and freight.
3. Social-reuse contribution: Good360’s published \$100/\$150/\$240 figures describe the cost of testing, wiping, refurbishing, delivery, data and impact—not necessarily a fee for someone handing over a broken laptop.
4. Value recovery: WorkVentures, Renew IT, PonyUp and Sircel may return value for suitable assets. That is a separate number from the cost of processing the rejects.

Quote request to send each commercial provider

Ask for a written response using the same facts:

- Dubbo NSW 2830 pickup address and whether the site is accessible to a rigid truck;
- estimated monthly volume by category: laptops, desktops, monitors, phones, TVs, printers, networking gear and loose parts;
- approximate weights and pallet/cage count;
- percentage believed working, repairable, locked, data-bearing, damaged or battery-affected;
- whether Dubbo E-Waste has already triaged and serialised the equipment;
- required data standard and whether certificates are per device;
- pickup, freight, pallet/cage, sorting, battery and non-conforming-item fees;
- minimum load and collection frequency;
- reuse, resale, donation and recycling split;
- rebate/buyback formula for reusable equipment;
- reporting: weight, asset list, chain of custody, wipe certificates and final route;
- GST, insurance, dangerous-goods conditions and cancellation fees.

Recommended first calls

1. Ecoactiv: confirm a free Dubbo NTCRS pickup for a defined pilot batch.
2. Sircel: request a quote for mixed end-of-life material plus separate reuse/ITAD treatment.
3. WorkVentures/CircularIT: ask whether good laptops and phones can enter the National Device Bank/social-reuse pathway.
4. National Device Bank: ask whether Dubbo E-Waste can aggregate more than 50 qualifying devices or act as a regional collection partner.
5. MobileMuster: establish a separate phone/accessory stream with a collection unit.
6. Ecycle Solutions and TechCollect: confirm the nearest current Dubbo route for free NTCRS material.

This research does not establish that any provider has agreed to service Dubbo, nor does it replace a written quote, waste-licence check, dangerous-goods check or data-processing agreement.
