Source commit: c2103b6090c8

Pack generated: 6 October 2026

DubboEwaste Evidence Standard

All factual claims, operational rules, and external relationships in this repository **MUST** be documented in `data/evidence.yaml` according to this schema before being promoted to [VERIFIED] status in operational documents.

Schema Requirements (YAML)

Every evidence record must be an object in a YAML list with the following exact keys:

- id: Unique identifier (e.g., EVD-001)
- claim: The specific, auditable statement.
- type: Verified Fact, Proposed Policy, Hypothesis, or Research Lead.
- source: Name of the source.
- url: Link to the primary source or document.
- date_checked: ISO 8601 date (YYYY-MM-DD).
- verification_method: Primary source, Direct contact, Public registry, Independent secondary source, or Industry inference.
- confidence: High, Medium, or Low.
- notes: Any context, caveats, or limitations.

Agent Instructions

1. Never mark a claim as [VERIFIED] in any markdown document unless a corresponding, validated entry exists in `data/evidence.yaml`.
2. Never make completion-style git commits (e.g., "complete e-waste research") without attaching or referencing the validated evidence records.
3. Before committing changes to evidence, agents **MUST** run `python3 scripts/validate_evidence.py` and ensure a 0 exit code.
