Pack generated: 6 October 2026

AMR Dubbo downstream forensic trace — who actually receives the e-waste?

Research date: 2 October 2026 (AEST)

Question: After Australian Metal Recycling (AMR) accepts TVs, computers/laptops, monitors, smartphones/tablets and printers/scanners at 34 Mountbatten Drive, Dubbo, which company/facility receives that e-waste next?

Executive verdict

After searching AMR/Scrap Metal Services material, NSW/Federal government sources, NTCRS co-regulator records, current TechCollect partner information, historic Matthews Metal Management contracts, regional council records, recycler websites and exact-name searches across the current co-regulator domains:

No public source found names the current downstream company or facility that receives AMR Dubbo's e-waste.

That means there is currently no defensible public evidence for a statement such as:

- "AMR Dubbo sends it to Sircel Parkes"
- "AMR Dubbo sends it to ACE Recycling"
- "AMR Dubbo sends it to Sims"
- "AMR Dubbo sends it through TechCollect"
- "AMR Dubbo sends it to Rutherford first"

Each of those has some surrounding evidence or historical plausibility, but none has the missing direct link.

What the research does achieve is narrow the field substantially and show exactly what would prove the chain.

1. Highest-confidence current chain

Confirmed

AMR Dubbo

- 34 Mountbatten Drive, Dubbo NSW 2830
- operated by Scrap Metal Services Pty Ltd / Australian Metal Recycling
- registered NSW scrap-metal yard under SM-0759
- accepts e-waste including TVs, computers/laptops, monitors, smart phones/tablets and printers/scanners
- AMR says e-waste/electrical waste is accepted free

- lithium-ion material/batteries are excluded in AMR's published material rules

Not publicly disclosed

The next named node is missing:

AMR Dubbo → [UNDISCLOSED FIRST DOWNSTREAM FACILITY]

From there, a specialist recycler would normally dismantle/shred/sort and send commodity fractions to later processors. But the first downstream recipient from Dubbo remains unverified.

2. Could the next stop simply be another AMR yard?

Rutherford is a real AMR processing/consolidation hub — but not proven for Dubbo e-waste

AMR's 2025 National Recycling Week article calls Rutherford, 71 Kyle Street, a "major operational hub" for the Hunter/Newcastle/Maitland/Central Coast region. It says metal dealers consolidate material there for processing and onward sale.

The same article separately describes the regional yards at:

- Tamworth
- Dubbo
- Kempsey
- Maclean

and says they provide the same door-trade service.

It also lists e-waste among the materials AMR handles across the network.

What this proves

- AMR has an internal network with consolidation/processing capability.
- Rutherford is explicitly a major hub.
- AMR moves recovered material onward for sale/processing.

What it does not prove

- that Dubbo e-waste is trucked to Rutherford;
- that Rutherford dismantles/shreds e-waste;
- that Rutherford is the first stop after Dubbo;
- that e-waste follows the same route as ferrous/non-ferrous scrap.

Status: plausible internal-node hypothesis, not evidence of the Dubbo e-waste route.

3. The "Australian Metal Refiners" clue

Scrap Metal Services Pty Ltd (ABN 51 640 765 091) currently has several registered business names:

- Australian Metal Recycling

- Australian Metal Refiners
- Metal Refiners
- Wilson Metal Collections
- Wilson Metal Recyclers
- Wilson Metal Recycling

These names were registered in March/April 2025.

The same legal entity now has AMR yards at Wyong and Woy Woy, which had historically operated under the Australian Metal Refiners name before the current Scrap Metal Services registration took over those locations.

Important limitation

A business name containing "Refiners" is not evidence that the company operates a specialist e-waste refinery.

No current AMR source found identifies:

- a PCB precious-metal refining line;
- a CRT processing line;
- a dedicated e-waste shredding line;
- a lithium-ion treatment line;
- a specific AMR "refinery" receiving Dubbo e-waste.

So this corporate-name clue does not close the chain.

4. Historical Matthews link to the NTCRS

This is the strongest historical clue.

A 2015 Great Lakes/MidWaste council report says Matthews Metal Management had provided free e-waste collection/recycling and explicitly says the free service was possible because Matthews was operating under the Australian Government's National Television and Computer Recycling Scheme (NTCRS).

The report says Matthews later terminated that free arrangement toward the end of 2014 after scheme funding/collection-volume problems.

A separate historical Recycling Near You listing for Matthews' Parkes site stated:

- only e-waste covered by the NTCRS was accepted;
- users should refer to TechCollect's accepted-products list.

What this establishes

- the Matthews business definitely participated in NTCRS-funded e-waste collection historically;
- at least one Matthews listing explicitly pointed to TechCollect's product scope.

What it does not establish

- that current AMR/Scrap Metal Services is currently a TechCollect partner;
- that AMR Dubbo's current free service is NTCRS funded;

- that current AMR material follows the old Matthews route.

The ownership/legal structure and operating network have changed since the historical arrangement.

5. If historical Matthews was using TechCollect, who were the NSW recyclers?

ANZRP's 2014–15 annual report shows TechCollect's NSW recycling network included:

- Sims
- TES-AMM

The 2015–16 ANZRP report again lists:

- Sims Recycling Solutions — NSW
- TES-AMM Australia — NSW/QLD/VIC

Can we say Matthews e-waste went to Sims or TES-AMM?

No.

The historical council record identifies Matthews as the collection/recycling contractor, and TechCollect identifies its NSW recycler pool, but no source found maps a particular Matthews load or collection site to one specific recycler.

Therefore the strongest honest historical statement is:

Historical Matthews NTCRS material could have entered a TechCollect NSW recycler network that included Sims and TES-AMM, but the exact recycler for Matthews loads has not been established.

6. Current TechCollect / ANZRP route

The current DCCEEW list (updated 20 May 2026) identifies five approved NTCRS co-regulatory arrangements:

1. Activ Group Solutions / Ecoactiv
2. Australia and New Zealand Recycling Platform / TechCollect
3. Ecocycle
4. Ecycle Solutions
5. Sustainable Product Stewards

For TechCollect specifically, ANZRP's 2024–25 audited annual report names the NSW recycling partners as:

- ACE Recycling Group
- Sircel

ANZRP says every TechCollect delivery receives a unique ID and is tracked:

collection site → logistics provider → recycler.

It also says first-stage recycling occurs in Australia and involves dismantling, shredding and sorting into glass, metals, plastics, batteries, PCBs, toner/ink and other fractions.

Current TechCollect collection-partner check

TechCollect's current NSW collection-partner page lists sites including Albury, Blaxland, Burwood, Canada Bay, Hornsby, Inverell, Katoomba, Kimbriki, Lismore, North Sydney and Shoalhaven.

AMR, Matthews and Dubbo are not listed on that current NSW collection-partner page.

Exact-name searches across TechCollect/ANZRP and the other current NTCRS co-regulator domains did not produce a current public AMR/Scrap Metal Services relationship.

Conclusion

ACE and Sircel are real current NSW TechCollect recyclers, but there is no public evidence found that AMR Dubbo is currently feeding TechCollect.

7. Sircel Parkes — the geographically strongest candidate, but still unproven

Sircel operates a current e-waste facility at:

55 Brolgan Road, Parkes NSW

This matters because:

- Parkes is a regional NSW processing location comparatively close to Dubbo;
- Sircel publicly says it receives regional e-waste at Parkes;
- Sircel documented receiving its first Parkes e-waste delivery from Narromine Shire Council;
- Sircel says its expansion into regional NSW was supported by NetWaste;
- Parkes Shire Council records e-waste from Parkes Landfill being collected by Sircel;
- Sircel is one of ANZRP/TechCollect's current NSW recycling partners.

Sircel says its facilities assess, repurpose or recycle e-waste and that it prioritises reuse before recycling.

Why this looks attractive as a hypothesis

Geographically and operationally, Sircel Parkes is exactly the kind of facility that could receive Central West e-waste.

Why it still cannot be named as AMR Dubbo's processor

No AMR, Sircel, council, tender, TechCollect or government source found says:

"AMR Dubbo sends its e-waste to Sircel Parkes."

Exact searches for combinations of Australian Metal Recycling / Scrap Metal Services / Gordon Matthews with Sircel produced no documentary link.

Status: strong regional candidate, zero direct AMR link found.

8. ACE Recycling Group — another real current NSW recycler, but no AMR link

ACE Recycling Group is the other current NSW recycler named in ANZRP's 2024-25 annual report.

Current ACE NSW facilities include:

- St Marys — 7 & 8 Kommer Place, NSW 2760
- Heatherbrae/Newcastle — 24 Heather Street, NSW 2324

ACE says it:

- dismantles and sorts e-waste;
- separates PCBs, metals, plastics and glass;
- processes e-waste under AS/NZS 5377;
- provides chain-of-custody/data-destruction documentation.

A Penrith planning document for ACE's St Marys operation describes receiving whole e-waste units (TVs, computers etc.), dismantling them into plastics, circuit boards, glass, batteries and metal, then sending those fractions to downstream recyclers.

Why ACE is plausible

It is a genuine current NSW first-stage processor in the TechCollect network, and Heatherbrae is in the same broad Hunter transport corridor as AMR's Rutherford operations.

Why it cannot be named

No source found connects AMR/Scrap Metal Services to ACE.

Status: credible industry candidate, no direct AMR evidence.

9. Sims — strong regional history, but not proof of AMR's current route

NetWaste's current e-waste information says Sims Metal Management collects e-waste from the majority of NetWaste councils.

Older NetWaste strategy material described regional e-waste being shredded at Sims St Marys and also discussed recovery work with Ecycle Solutions.

This gives Sims an established Central West/NetWaste footprint.

However

AMR Dubbo's own free e-waste service is a separate commercial service unless proven otherwise. No source found links current AMR Dubbo loads to Sims.

Status: current regional downstream player; no direct AMR link.

10. Dubbo Council's route is not automatically AMR's route

Dubbo Regional Council's adopted 2025–35 Waste Strategy recorded:

- Matthews Metals — e-waste collection
- commencement: 30 June 2023
- expiry: 30 June 2025

The strategy predates/overlaps the corporate transition to the current AMR/Scrap Metal Services operation.

No post-30-June-2025 public contract has been found that identifies Dubbo Council's current e-waste collector/processor.

Therefore:

- the Council → downstream route cannot safely be used as proof of the AMR retail-yard → downstream route;
- even if Council now uses Sircel, Sims or another provider, that does not automatically mean AMR does.

11. One important finding about reuse

Formal recycling networks make a distinction between reuse and material recycling.

Sircel publicly says its ITAD operation prioritises reuse/repurposing where viable.

TechCollect's public guidance focuses on recycling collected NTCRS products through approved recyclers; first-stage recycling is dismantling/shredding/sorting.

AMR's current public material is overwhelmingly framed around:

- scrap/electrical waste;
- recoverable metals;
- weighing;
- processing;
- material returning to manufacturing.

No AMR public source found describes:

- powering devices on;
- testing whether they work;
- refurbishing laptops/phones/TVs;
- listing working electronics for resale;
- diverting reusable devices to charities/refurbishers.

This does not prove AMR never reuses anything internally. It means there is no published reuse-triage process found.

That makes the pre-recycling reuse layer proposed for Dubbo eWaste materially different from AMR's published service.

12. What has been ruled out as an unsupported claim

"AMR Dubbo sends everything to Rutherford"

Not proven. Rutherford is an AMR hub, but the Dubbo e-waste route is not specified.

"AMR Dubbo sends e-waste to Sircel Parkes"

Not proven. Sircel Parkes is a very plausible regional specialist and documented NetWaste processor, but no AMR link was found.

"AMR Dubbo sends it to ACE"

Not proven. ACE is a current NSW TechCollect recycler, but no AMR link was found.

"AMR Dubbo sends it to Sims"

Not proven. Sims has regional NetWaste history/current presence, but no AMR link was found.

"AMR is currently TechCollect"

Not supported by current public evidence. Historical Matthews had NTCRS/TechCollect links, but current TechCollect partner material does not identify AMR/Dubbo.

"Australian Metal Refiners means AMR refines its own e-waste"

Not supported. It is a registered business name, not evidence of a specialist e-waste refining plant.

13. Current evidence map

Possible next node | Evidence supporting it | Evidence missing | Status

AMR Rutherford | AMR calls it a major hub; material consolidated for processing/onward sale | No statement Dubbo e-waste is sent there | plausible internal node

Sircel Parkes | current regional e-waste processor; NetWaste/Narromine/Parkes links; current TechCollect NSW recycler | no AMR/Scrap Metal Services link | strong regional candidate only

ACE St Marys / Heatherbrae | current TechCollect NSW recycler; certified e-waste processor | no AMR link | industry candidate only

Sims | current NetWaste majority-council collector; historical St Marys processing | no AMR link | regional candidate only

Other private recycler | AMR may have direct commercial off-take contracts not published | identity/contract unknown | entirely possible

14. What would count as proof

Any one of these could close the gap:

1. AMR weighbridge / dispatch docket showing the destination of an e-waste load.
2. AMR certificate of recycling naming the processing facility.
3. A downstream vendor invoice/account statement.
4. An AMR transport manifest / consignment note.
5. A written AMR response naming its downstream recycler.
6. An AS/NZS 5377 certificate or subcontractor record tied to AMR's e-waste service.
7. A current NTCRS co-regulator contract/partner record naming Scrap Metal Services/AMR.
8. A council tender/contract schedule that names both AMR and the downstream processor.

Until one of those exists, the downstream name remains unverified.

15. Exact questions to ask AMR

The most useful wording is deliberately difficult to answer with generic marketing:

"What legal entity takes ownership or physical custody of the e-waste after it leaves 34 Mountbatten Drive, Dubbo?"

Then:

"What is the street address of the first facility it is transported to?"

"For a pallet/cage of computers and TVs, is the first destination one of your own yards or an external recycler?"

"If it is another AMR yard, which yard, and what processing happens there before it goes to a specialist recycler?"

"Who is the contracted e-waste processor — company name and ABN?"

"Can you give me a sample certificate of recycling, weight docket or chain-of-custody report with commercial details redacted?"

"Is the service funded under an NTCRS co-regulatory arrangement? If yes, which one?"

"Is the first-stage recycler AS/NZS 5377 certified, and what is the certificate/scope?"

If the person at the Dubbo yard does not know, ask for the operations/compliance manager responsible for e-waste downstream vendors, rather than accepting "it all gets recycled".

16. Secondary verification calls

If AMR names a provider, verify independently with that provider:

Sircel

- 1300 439 278
- Ask whether Sircel receives e-waste from Scrap Metal Services Pty Ltd / Australian Metal Recycling Dubbo.

ACE Recycling Group

- 1300 620 666
- Ask the same, specifying Dubbo / Scrap Metal Services Pty Ltd.

TechCollect / ANZRP

- TechCollect: 1300 229 837
- Ask whether Scrap Metal Services Pty Ltd or Australian Metal Recycling is a current TechCollect collection/logistics/recycling partner, even if it is not shown on the public collection-partner page.

National EPA / NTCRS

- ewaste@dcceew.gov.au

- Ask which approved co-regulatory arrangement, if any, reports e-waste collected through Scrap Metal Services Pty Ltd / Australian Metal Recycling.

These calls can turn the present forensic inference into a confirmed chain.

Final status

Confirmed current downstream recipient from AMR Dubbo: NOT PUBLICLY IDENTIFIED

Most useful next evidence: an AMR dispatch/weight/certificate document or a direct written answer giving the downstream company's legal name and facility address.

Strongest candidate worth checking first: Sircel Parkes, because it is a real regional processor with direct NetWaste/Narromine/Parkes evidence and is a current NSW TechCollect recycler. This is a research lead, not a finding that AMR uses Sircel.

Second candidate: ACE Recycling Group (St Marys/Heatherbrae), also a current NSW TechCollect recycler, again with no current AMR link found.

Historical network lead: TechCollect → Sims/TES-AMM during the period when Matthews was demonstrably operating under NTCRS; this is historical only.
