

Backlog 13 16 Regional Supply

Source type: DubboEwaste repository document

Repository path: docs/BACKLOG-13-16-REGIONAL-SUPPLY.md

Source commit: c2103b6090c8

Pack generated: 6 October 2026

Backlog research 13-16 — regional pathways, NetWaste, supply volumes and sources

Research date: 2 October 2026

Scope: items 13-16 of the Dubbo eWaste online-research backlog.

Status: current public-source research. Where public records do not settle a question, it is marked unresolved rather than inferred.

Confidence labels

- VERIFIED — directly supported by a current official/primary source.
- STRONG — supported by multiple credible sources but one link in the chain remains unpublished.
- UNRESOLVED — current public web research did not establish it.

13. Surrounding councils — 2026 e-waste pathways

Regional framework first

NetWaste's current e-waste page is the best regional cross-check.

It states:

Sims Metal Management collect eWaste from the majority of NetWaste Councils; several councils have individual arrangements.

The same current page lists the regional e-waste collection centres that NetWaste publicly recognises.

Current listed centres relevant to the Dubbo catchment include:

- Dubbo / Whylandra Waste and Recycling Centre
- Wellington Waste Facility
- Darroobalgie Landfill near Forbes
- Kandos Waste Facility
- Mudgee Waste Facility
- Gulgong Waste Facility
- Narromine Landfill
- Parkes Waste Management Facility
- Ewenmar Waste Management Facility at Warren

Important: NetWaste membership does not mean every member Council is on the Sims e-waste arrangement. Bogan, Coonamble and Gilgandra are NetWaste members but are not shown on the current NetWaste e-waste-centre list.

Source:

<https://www.netwaste.com.au/ewaste/>

13.1 Dubbo / Wellington

Whylandra

VERIFIED current 2026/27 service:

- household e-waste and old TVs are accepted through Council's waste/CRC system in domestic quantities
- Council's hazardous-waste page says domestic quantities up to 20 kg or 20 L container size for listed household problem wastes, including e-waste/old TVs, can be dropped off at no charge
- Council also directs customers to current 2026/27 waste-facility fees for other loads.

Sources:

- <https://www.dubbo.nsw.gov.au/Households-Residents/Rubbish-Recycling-and-Sustainability/whylandra-waste-recycling-centre>
- <https://www.dubbo.nsw.gov.au/Households-Residents/Rubbish-Recycling-and-Sustainability/hazardous-waste>

Wellington

VERIFIED current 2026/27 service:

- segregated recyclables are free
- the current page expressly includes domestic recyclables including polystyrene and e-waste, delivered in 1 m³ bulk bags, as free disposal per tonne.

Source:

<https://www.dubbo.nsw.gov.au/Households-Residents/Rubbish-Recycling-and-Sustainability/wellington-waste-transfer-station>

Village/rural Dubbo Regional Council sites

VERIFIED: Council's current village/rural page says:

- domestic e-waste, household quantities only, is free
- large/commercial/industrial waste is not accepted at these smaller facilities.

Source:

<https://www.dubbo.nsw.gov.au/Households-Residents/Rubbish-Recycling-and-Sustainability/village-and-rural-waste-depots>

Contractor/downstream

The current public NetWaste map lists Whylandra and Wellington as e-waste centres.

The last Council contract publicly identified in the Dubbo Waste Strategy was Matthews Metals to 30 June 2025. The exact post-June-2025 contractor remains unresolved and is covered in

Reuse triage

UNRESOLVED: no current Council page found says whole computers are formally tested/refurbished before entering the recycling stream.

Council's A-Z guide does encourage reuse for some goods generally, but that is not evidence of a formal e-waste reuse program.

13.2 Narromine / Trangie / Tomingley

Current fees

VERIFIED from Narromine Shire Council, effective 1 July 2026:

Domestic e-waste is listed under recyclable items at:

No Charge

The same no-charge recyclable list includes household recyclables, used motor oil, car batteries, whitegoods, scrap metal and other listed streams.

Source:

<https://www.narromine.nsw.gov.au/residents/waste-disposal-fees>

Facilities

Council operates waste facilities at:

- Narromine
- Trangie
- Tomingley.

The current free-waste-voucher page confirms vouchers can be used at all three facilities, but this is a general-waste mechanism rather than the basis for free e-waste.

NetWaste's current regional e-waste map specifically lists Narromine Landfill as the recognised e-waste recycling centre.

Trangie/Tomingley qualification

Because NetWaste only specifically maps Narromine as the e-waste collection point, the exact site-level e-waste acceptance rules at Trangie and Tomingley should be confirmed before sending a Dubbo eWaste load there.

Contractor/downstream

UNRESOLVED specifically for Narromine: NetWaste says Sims handles the majority of member councils but several councils have individual arrangements. The public page does not identify which group Narromine falls into.

The broader repo separately documents current Sircel activity in the Central West and Narromine-related regional work, but that must not be converted into an unsupported statement that all Narromine e-waste goes to Sircel.

13.3 Gilgandra

Current facility

VERIFIED: Gilgandra Waste Facility is operated in partnership between Gilgandra Shire Council and Carlinda and has:

- recycling
- Community Recycling Centre functions
- scrap steel
- other separated streams.

Council links a current 2026/27 Waste Fees and Charges schedule from the facility page.

Source:

<https://www.gilgandra.nsw.gov.au/Live/Recycling-Waste/Gilgandra-Waste-Facility>

E-waste fee

Earlier adopted schedules showed e-waste such as TVs, computer monitors and printers at no charge.

UNRESOLVED for the exact 2026/27 e-waste row: the current fee schedule is linked, but the e-waste line was not exposed in the indexed current-page text during this research. Do not assume the old \$0 row continued unchanged without reading the adopted 2026/27 PDF or asking Council.

Regional contractor

Gilgandra is a NetWaste member, but the current NetWaste e-waste collection-centre list does not list Gilgandra.

Therefore:

- do not assign Sims automatically
- do not state there is no e-waste route
- ask Council for its current individual arrangement.

Reuse

Facility planning documents discuss sorting stockpiles for recycling/reuse generally.

No current public evidence found of computer-by-computer refurbishment or resale triage.

13.4 Coonamble / Gulargambone / Quambone

These are unusually clear at the facility level.

Coonamble Waste Management Facility

VERIFIED current Council page:

- commercial, industrial and domestic waste accepted
- sorted e-waste is one of the streams that can be disposed of without charge.

Source:

<https://coonambleshire.nsw.gov.au/residents/coonamble-waste-management-facility-1>

Gulargambone Waste Transfer Station

VERIFIED current Council page:

- domestic waste only
- commercial/industrial waste not accepted
- sorted e-waste can be disposed of without charge
- scavenging is explicitly prohibited.

Source:

<https://coonambleshire.nsw.gov.au/residents/gulargambone-waste-transfer-station>

Quambone Waste Facility

VERIFIED current Council page:

- domestic waste only
- commercial/industrial waste not accepted
- sorted e-waste can be disposed of without charge.

Source:

<https://www.coonambleshire.nsw.gov.au/residents/quambone-waste-facility>

Contractor/downstream

Coonamble is a NetWaste member but none of these three sites appears on NetWaste's current public e-waste-centre map.

UNRESOLVED: current e-waste contractor and physical next destination.

Ownership/reuse

Gulargambone expressly prohibits scavenging. No public evidence found that customers or third parties can remove deposited electronics for reuse.

This matters if Dubbo eWaste ever discusses a recovery partnership: permission must come from Council, not informal scavenging.

13.5 Warren

Current collection point

VERIFIED through NetWaste: Ewenmar Waste Management Facility is a current regional e-waste recycling centre.

Address listed by NetWaste:

8161 Oxley Highway, Warren.

Source:

<https://www.netwaste.com.au/ewaste/>

Current Warren facility

Warren Shire Council currently operates Ewenmar Waste Depot. The facility has undergone a transfer-station upgrade aimed at improving sorting and reducing recyclables entering landfill.

Source:

<https://www.warren.nsw.gov.au/residents/waste-depot>

Kerbside change

A new Warren/Nevertire/Collie kerbside recycling service commences in October 2026.

Council's current guidance explicitly says e-waste does not belong in the yellow-lid recycling bin, so the Ewenmar/special-stream pathway remains relevant.

Source:

<https://www.warren.nsw.gov.au/kerbside-recycling/get-started>

Fees, commercial limits and contractor

UNRESOLVED publicly for e-waste specifically:

- exact current e-waste fee
- business quantity rules
- whether Warren is currently in the Sims-majority arrangement or an individual arrangement.

NetWaste confirms the site, not the specific contractor.

Reuse

Council has previously considered further resource-recovery improvements and Tip Shop concepts, but no current source found proves a fully operating electronics reuse shop in 2026.

Do not describe a proposed Tip Shop as current.

13.6 Nyngan / Bogan Shire

Current facility

VERIFIED: Nyngan Waste & Resource Facility is a Council facility with NSW EPA licence 20471.

Source:

<https://bogan.nsw.gov.au/everyday-living/waste-recycling/nyngan-waste-resource-facility>

Historical e-waste evidence

Council records from 2020-21 clearly show:

- a separated e-waste stockpile/cell existed
- an e-waste fire occurred in November 2020
- another incident in July 2021 involved fires in an e-waste disposal cell.

This confirms e-waste historically had a separated pathway.

2026 acceptance/fee

UNRESOLVED: current indexed Council pages did not establish:

- exact 2026/27 e-waste acceptance
- current fee
- household/commercial quantity rules
- current downstream contractor.

Bogan Shire is a NetWaste member but Nyngan does not appear on NetWaste's current public e-waste-centre list.

That strongly suggests the current arrangement needs direct Council confirmation rather than assuming Sims.

13.7 Parkes

Current household service

VERIFIED: Parkes Shire's 2026 bulky-waste collection required e-waste to be separated into the scrap metal/whitegoods/e-waste pile.

Accepted examples included:

- TVs
- e-waste
- microwaves
- small appliances.

Trade, industrial and shop waste was excluded from the household bulky collection.

Source:

<https://www.parkes.nsw.gov.au/Services/Waste-and-recycling/Waste-Collection-Days-and-Bins>

Current e-waste centre

NetWaste lists Parkes Waste Management Facility as a current e-waste recycling centre.

Sircel relationship — important regional exception

Parkes Council's 2024/25 operational progress reporting records that:

- e-waste from Parkes Landfill was collected by Sircel
- the arrangement was described as circular
- Council also coordinated Sircel in relation to Parkes High School.

Parkes' July–December 2025 progress reporting then records that Council was investigating shared e-waste recycling agreement opportunities between Sircel and RGDC.

These are two different facts:

1. Sircel has already performed real Parkes e-waste collection work.
2. A broader/shared agreement was still being investigated.

Do not turn the second point into a completed regional Sircel contract.

Sources:

- Parkes Shire Operational Plan Progress Report 2024/25
- Parkes Shire Operational Plan Progress Report July–December 2025

Current contract term/value

UNRESOLVED: no current public source found a formal Sircel contract number, expiry date or value for the Parkes e-waste collection arrangement.

13.8 Forbes

Current collection point

VERIFIED through NetWaste: Daroobalgie Landfill, Calarie-Daroobalgie Road, is currently listed as an e-waste recycling centre.

Source:

<https://www.netwaste.com.au/ewaste/>

Fee / commercial rules

UNRESOLVED from current indexed Forbes Shire pages:

- current household fee
- current commercial fee
- quantity limits
- exact accepted device categories.

Contractor

Because NetWaste only says Sims collects for the majority of member councils, it is not safe to state Forbes' current e-waste contractor is Sims without a council/contract record.

Current specific contractor remains unresolved.

13.9 Mid-Western Regional Council — Mudgee / Gulgong / Kandos

This is the most interesting nearby reuse precedent.

Current Council direction

VERIFIED current Council page:

For e-waste, Council tells residents to deliver it to:

- Gulgong Waste Facility
- Kandos Waste Facility
- the Tip Shop at Mudgee Waste Facility.

Source:

<https://www.midwestern.nsw.gov.au/Services/Bins-and-waste/Waste-guide/EWASTE>

Why the Mudgee result matters

The explicit Tip Shop routing means a reuse/resale interface exists in the current Council pathway rather than every device being described solely as a material-recycling input.

It does not prove:

- every electronic item is tested
- every reusable device is diverted
- a quantified reuse percentage.

But it is a real regional precedent for integrating e-waste intake with a reuse shop.

NetWaste

NetWaste also lists:

- Mudgee
- Gulgong
- Kandos

as current e-waste recycling centres.

Contractor/downstream

UNRESOLVED: current specific downstream contractor for each Mid-Western e-waste stream and whether the residual stream uses Sims or an individual arrangement.

13.10 Summary table

Area	Current public e-waste route	Fee evidence	Current downstream contractor	Reuse evidence
Dubbo	Whylandra	household domestic e-waste free	post-Jun-2025 contractor unresolved	no formal device triage proved
Wellington	Waste Transfer Station	segregated e-waste free under current page	unresolved	no formal device triage proved
Narromine	Narromine Landfill	domestic e-waste no charge 2026/27	unresolved	not proved
Trangie/Tomingley	Council waste facilities	site-specific e-waste detail to confirm	Shire fee schedule gives domestic e-waste no charge	unresolved not proved
Gilgandra	Gilgandra Waste Facility	exact 2026/27 e-waste row unresolved	unresolved	general sorting/reuse, not device triage
Coonamble	Coonamble WMF	sorted e-waste free	unresolved	no scavenging/reuse right established
Gulgambone	transfer station	sorted e-waste free	unresolved	scavenging prohibited
Quambone	waste facility	sorted e-waste free	unresolved	not proved
Warren	Ewenmar	exact e-waste fee unresolved	unresolved	transfer-station recovery only
Nyngan	Nyngan Waste & Resource Facility	current e-waste fee unresolved	unresolved	historic separated stream only
Parkes	Parkes WMF + bulky collection	household bulky stream accepts e-waste	Sircel has actual collection evidence	circular arrangement referenced
Forbes	Daroobalgie Landfill	current fee unresolved	unresolved	not proved
Mudgee	Mudgee Waste Facility Tip Shop	exact current fee unresolved	unresolved	current Tip Shop route verified
Gulgong/Kandos	Council waste facilities	exact current fee unresolved	unresolved	not separately proved

14. NetWaste / Sims / Sircel regional chain

14.1 Current regional statement

NetWaste currently says:

Sims Metal Management collect eWaste from the majority of NetWaste Councils; several councils have individual arrangements.

That is the strongest current public description of the regional contractor pattern.

Source:

<https://www.netwaste.com.au/ewaste/>

14.2 Which councils exactly use Sims?

UNRESOLVED publicly.

NetWaste does not publish a current participation table on the e-waste page assigning each member to:

- Sims
- individual contractor
- own-site processing
- another arrangement.

Therefore the repo must not label every NetWaste collection point “Sims”.

14.3 Historic Sims / St Marys chain

A 2022 NetWaste regional-contract update recorded:

- Sims Metal Management
- McCabe Transport as collection subcontractor
- contract commencement 1 September 2021
- an e-waste recycling option/trial involving shredding at St Marys Depot.

This is valuable history but not proof of the current 2026 route.

The old published contract expiry/extensions have passed.

Source:

https://netwaste.com.au/wp-content/uploads/2023/03/TW22135_NetWaste_Regional-Waste-and-Sustainable-Materials-Strategy-2023-2027_5.0.pdf

14.4 Parkes / Sircel proves individual arrangements exist in practice

Parkes Council's own progress reports show:

- Parkes Landfill e-waste collected by Sircel
- a circular arrangement
- later investigation of a broader shared agreement.

That aligns with NetWaste's warning that some councils have individual arrangements.

14.5 Sircel reuse/ITAD

The existing repo file SIRCEL-ITAD-REUSE-MODEL.md covers:

- reuse-first triage
- data wiping
- equipment testing
- buy-back/reuse
- downstream processing
- public reuse metrics.

For backlog item 14, the new finding is not that Sircel exists; it is that Parkes Council records confirm Sircel in an actual regional collection role.

14.6 Current regional tender number/start/end dates

UNRESOLVED: no current public e-waste tender/contract number and council-by-council participation schedule surfaced on NetWaste's current project/tender pages.

NetWaste's tender page says it coordinates quotation/tender processes as needed and advertises opportunities on:

- its website
- Facebook

- Tenderlink as appropriate.

Source:

<https://www.netwaste.com.au/projects/quotation-tender-processes/>

14.7 Upcoming opportunities

No current e-waste tender was visible during this research.

NetWaste is currently advertising procurement activity for other streams, which confirms the site is worth monitoring.

Action

Monitor:

- <https://www.netwaste.com.au/projects/>
- <https://www.netwaste.com.au/projects/quotation-tender-processes/>
- Tenderlink
- Orange City Council procurement where Orange is coordinating Council.

14.8 Best information request to NetWaste

Ask for a current 2026 e-waste participation table containing:

- member council
- participating facility
- contractor
- transport subcontractor
- first processing site
- contract/RFQ number
- commencement
- expiry/extensions
- accepted products
- fees/credits
- NTCRS/co-regulator
- AS 5377 processor
- annual tonnes
- reuse requirement/option.

That single dataset would resolve many remaining regional gaps.

15. Actual regional e-waste volume and supply

15.1 Dubbo — verified historical e-waste tonnes

2021/22

Dubbo Regional Council Annual Report:

- 904 tonnes recycled material sent off site in total
- including 27 tonnes of e-waste.

Other listed streams included scrap metal, tyres and CRC materials.

Source:

https://www.dubbo.nsw.gov.au/ArticleDocuments/11102/20220926%20DRC%20Annual%20Report%202021%202022_Web.pdf.aspx

2022/23

Dubbo Regional Council Annual Report:

- 558 tonnes recycled material sent off site
- including 18 tonnes of e-waste
- 448 tonnes scrap metal
- 20 tonnes batteries
- 8 tonnes waste oil
- 37 tonnes tyres
- 27 tonnes CRC material.

Source:

<https://www.dubbo.nsw.gov.au/ArticleDocuments/278/CCL23-316%20-%20Draft%20Annual%20Report%202022-2023.pdf.aspx>

15.2 Later Dubbo annual reports

The 2024/25 Annual Report reports broader waste/recycling totals but the indexed report does not provide the same explicit e-waste category breakout found in 2021/22 and 2022/23.

Therefore:

Do not estimate 2026 Dubbo e-waste tonnage by applying a ratio to total recycling.

The public series is not comparable enough.

15.3 What the 18-27 tonne figures actually mean

They represent e-waste material recorded by Council and sent off site in those reporting years.

They do not equal:

- all Dubbo-generated e-waste
- all commercial e-waste
- Officeworks/retail take-back

- private scrap/recycler flows
- equipment retained in households
- reused/resold computers
- stockpiled devices.

They are therefore a minimum visible Council-managed stream, not total market supply.

15.4 Surrounding-council tonnage

UNRESOLVED: no consistent current public council-by-council e-waste tonnage dataset was found across the target councils.

Some councils report total resource recovery, CRC volumes or waste tonnage without breaking e-waste out.

Best data acquisition

Ask NetWaste and each Council for:

- annual e-waste tonnes by facility
- 2023/24
- 2024/25
- 2025/26
- contractor weighbridge/collection records
- number of collections
- whether tonnes include TVs/IT/printers together.

This would allow a real Dubbo catchment supply model.

15.5 National e-waste growth

Current Commonwealth e-stewardship guidance says:

- Australia generated 511,000 tonnes of e-waste in 2019
- projected to grow almost 30% to 657,000 tonnes by 2030.

An earlier detailed Commonwealth evidence model estimated:

- 521,000 tonnes in 2019
- 20.4 kg per capita
- 674,000 tonnes in 2030
- 23.4 kg per capita.

The numerical difference comes from different datasets/model versions. Use the current Commonwealth headline for simple communication and the evidence report for modelling context.

Sources:

- <https://www.dcceew.gov.au/environment/protection/waste/e-waste>
- <https://www.dcceew.gov.au/sites/default/files/env/pages/d347d42b-d755-481b-bc38-71683b5d1958/files/e-stewardship-evidence-report-2021.pdf>

15.6 NSW Government's Dubbo investment thesis

The NSW regional investment fact sheet specifically promotes e-waste recycling in Dubbo.

It argues Dubbo is well positioned because:

- road/rail/air connectivity
- central position between major markets
- ability to aggregate e-waste outputs such as:
 - metals
 - plastics
 - glass
 - circuit boards.

The fact sheet cites 539,000 tonnes of Australian e-waste in 2019 under the dataset it uses.

Source:

https://www.investregional.nsw.gov.au/sites/default/files/publications/2024-08/Dubbo_ewaste_recycling.pdf

What it does not provide

No local Dubbo annual generation forecast or guaranteed feedstock volume was found in that fact sheet.

So it supports the regional-hub thesis, not a business case for a specific shed volume.

15.7 Reusable share

Australian studies support reuse as a higher-order waste-hierarchy outcome, but no reliable source found gives a universal percentage of regional Council e-waste that Dubbo eWaste could profitably refurbish.

That percentage depends heavily on:

- source
- age
- battery condition
- activation/MDM locks
- whether valuable devices were removed before reaching the tip
- storage/weather exposure.

The first 20-30-item pilot remains the correct way to establish the local reusable share.

16. Potential supply sources

16.1 NSW public schools — volume exists, but the stream is contract-captured

This is one of the most important findings.

The NSW Department of Education's Technology in schools procedures, current in June 2026, says:

- principals must keep disposal/deactivation records
- memory/data must be correctly wiped
- configuration/storage must be securely wiped before disposal
- the Department has a dedicated eWaste contract for secure disposal of Department digital assets
- schools request e-waste collection through EDConnect.

Source:

<https://education.nsw.gov.au/policy-library/policies/pd-2024-0481-01>

Backlog evidence

A 2025 Technology for Learning update said there was a backlog of schools requesting eWaste collection and the Department was working with the vendor through the backlog.

Source:

<https://education.nsw.gov.au/teaching-and-learning/technology-for-learning/news-t4l/2025/issue122>

Meaning for Dubbo eWaste

NSW public schools should not be treated as an easy donation source.

A local school cannot simply bypass the Department's dedicated disposal process because Dubbo eWaste offers free collection.

Future opportunity would need to be one of:

- approved vendor/subcontractor
- formal Department arrangement
- a permitted reuse pathway inside Department policy
- future procurement.

Supply implication

The backlog proves substantial redundant equipment exists, but it is already inside a controlled institutional stream.

16.2 Independent/non-government schools

The position is more flexible but governance matters.

AISNSW material discussing NSW not-for-profit school regulation notes that disposal of school assets below reasonable market value can raise not-for-profit compliance questions.

It gives a concrete example of a metropolitan school wanting to donate old operational computers to a lower-fee regional school and argues such low-value school-to-school transfers should be permitted.

Source:

<https://www.aisnsw.edu.au/Resources/WAL%204%20%5BOpen%20Access%5D/Non-Government%20Schools%20Not-for-Profit%20Regulatory%20Framework%20development%20and%20Not-for-Profit%20Guidelines%20review.pdf>

Meaning

Independent schools may be potential sources, but Dubbo eWaste should require:

- authorised asset disposal
- clear title transfer
- market-value/governance sign-off where required
- data sanitisation responsibilities
- MDM/Autopilot/Activation Lock removal.

Do not assume a staff member can simply give the devices away.

16.3 NSW Government agencies — Device Bank changes the landscape

The NSW Device Bank launched in May 2026 and is directly relevant.

It:

- takes surplus government laptops
- securely removes data
- refurbishes/quality-tests them
- distributes them to people facing digital exclusion
- is delivered by NSW Telco Authority with WorkVentures.

Source:

<https://www.nsw.gov.au/ministerial-releases/nsw-device-bank-to-help-people-and-communities-get-online>

Scale

The public tender for the pilot disclosed:

- about 2,800 laptops in storage at contract start
- about 2,500 additional laptops expected over the following 12 months
- predominantly HP EliteBook x360 1030 G3/G4
- some G7/G8
- most expected to be five years old or older.

Source:

<https://buy.nsw.gov.au/prcOpportunity/9A339589-49D9-448D-9A06E56260BBFA42>

Strategic implication

This is both:

- a competitor/sink for government surplus laptops; and
- strong validation of the same reuse-first idea Dubbo eWaste is pursuing.

The NSW Digital Inclusion Action Plan explicitly aims to create a framework for all NSW Government agencies to donate end-of-use laptops to the Device Bank.

Source:

<https://www.nsw.gov.au/departments-and-agencies/nsw-telco-authority/publications/nsw-digital-inclusion-strategy/action-plan>

So future government laptop supply is likely to become more structured, not more casually available.

16.4 Government office circularity

In May 2026 NSW announced new circular-office guidelines intended to redirect surplus office furniture and technology across agencies and communities.

Schools, TAFE, Men's Sheds and SES were cited as beneficiaries.

Source:

<https://www.nsw.gov.au/ministerial-releases/office-reuse-guidelines-cut-waste>

Again, this validates reuse but means government assets increasingly move through approved channels.

16.5 NSW Government ITAD market

The current NSW End User Devices and Services contract includes end-of-life/disposal suppliers such as:

- Sims Lifecycle Services
- WorkVentures
- other approved end-user-device service providers.

Source:

<https://www.info.buy.nsw.gov.au/contracts/ict-end-user-devices-and-services>

Buy.NSW also contains specialist ITAD suppliers including:

- Sims Lifecycle Services
- Renew IT
- 9R Asset IT.

Examples:

- <https://buy.nsw.gov.au/supplier/profile/101328>
- <https://buy.nsw.gov.au/supplier/profile/1199>
- <https://buy.nsw.gov.au/supplier/profile/12450618>

Meaning

Government ITAD is a formal, competitive market with:

- procurement panels

- chain of custody
- data destruction
- environmental standards.

This is a future scale-up market, not the easiest source for a residential Phase 0 pilot.

16.6 Charles Sturt University

Charles Sturt University's IT equipment disposal policy says:

- surplus IT goes through the University's Computer Shop/disposal process or internal redeployment
- Computer Shop assesses surplus equipment
- confidential material/software/personal information must be removed
- staff are prohibited from casually removing, donating or selling University equipment to others without an approved exception.

Source:

<https://policy.csu.edu.au/document/view-current.php?id=399&version=1>

Meaning for Dubbo

The Dubbo campus is not an informal supply source.

Any opportunity would require:

- formal University approval
- procurement/disposal relationship
- or an approved exception.

16.7 NSW Health

NSW Health requires managed smart devices to be correctly disposed/reassigned, including remote wipe.

Where a third-party vendor destroys hardware, NSW Health policy requires a certificate of destruction.

Source:

https://www1.health.nsw.gov.au/pds/ActivePDSDocuments/PD2022_011.pdf

Meaning

Health facilities are potentially high-value institutional ITAD clients later, but they are not a casual shed donation source.

A credible future service would need:

- secure chain of custody
- formal vendor relationship
- auditable wiping/destruction
- certificates

- insurance
- appropriate premises.

16.8 Dubbo Regional Council

No current public ICT asset-disposal tender was found during this research.

Council's current procurement page says:

- procurement over \$225,000 including GST is publicly advertised through VendorPanel
- smaller procurement uses quote thresholds
- businesses can register relevant categories to receive opportunities
- an ABN is required.

Source:

<https://www.dubbo.nsw.gov.au/Business-Investors/Networks-and-Opportunities/doing-business-with-council>

Action

Register/monitor VendorPanel once the business structure exists.

Do not assume Council will donate redundant computers.

16.9 Auctions / paid surplus channels

Government and institutional redundant IT also appears through commercial auction channels such as Grays.

This can provide inventory, but it changes the model:

- stock costs money
- auction fees/freight matter
- condition risk moves to Dubbo eWaste.

That is a purchasing channel, not free e-waste supply.

Phase 0 should prioritise donated/collection stock before paying for bulk lots unless the resale economics are already proven.

16.10 Private Dubbo businesses

Public web searches did not reveal a sufficiently reliable list of Dubbo businesses currently announcing fleet replacements.

That is expected: small-business IT refreshes are usually not public events.

Best early targets

The most plausible Phase 0 supply sources are:

- households with worthwhile devices
- local SMEs
- farms/agri businesses
- accountants
- legal/professional offices
- clubs and community organisations
- charities
- private organisations replacing small batches of PCs
- independent schools where governance allows
- MSP/computer-service providers with lower-value retired stock they do not want to process themselves.

Offer

The strongest supply pitch is not:

Give me your old computers.

It is:

We can collect approved redundant electronics, inventory them, securely handle data-bearing devices, prioritise reuse/refurbishment, and route the remainder responsibly.

That creates an organisational reason to use Dubbo eWaste.

16.11 Intake requirements for institutional supply

For business/institutional batches, require:

- legal owner/entity
- authorised contact
- signed transfer/disposal authority
- asset list where available
- serials
- MDM/Autopilot removal
- Apple Activation Lock removal
- Google/Android account removal
- BIOS/firmware passwords
- data-handling instructions
- known battery damage
- accessories/chargers
- clear agreement on certificates/reporting.

This prevents a “free pickup” from turning into a pile of locked or unsaleable devices.

16.12 Best supply priorities for Phase 0

Tier A — target now after compliance gates are resolved

1. households with pre-screened quality devices
2. SMEs with 1-20 device refreshes
3. local professional offices
4. farms/agri businesses
5. clubs/charities/community organisations
6. independent/private organisations with authorised disposal.

Tier B — relationship-build

1. independent schools
2. local MSPs/computer businesses
3. larger employers
4. aged care/private health organisations
5. Council procurement.

Tier C — formal procurement only

1. NSW public schools
2. NSW Health
3. NSW Government agencies
4. Charles Sturt University
5. large institutional ITAD contracts.

13-16: what is now known versus still missing

Resolved/strongly narrowed

- Current NetWaste e-waste centre list.
- Sims handles the majority, not all, NetWaste councils.
- Parkes has real Sircel collection evidence.
- Mudgee currently routes e-waste through its Tip Shop.
- Coonamble/Gulgambone/Quambone current free sorted e-waste rules.
- Narromine's current 2026/27 domestic e-waste fee is \$0.
- Dubbo Council historical e-waste tonnage: 27 t in 2021/22; 18 t in 2022/23.
- NSW public-school e-waste is covered by a dedicated Department contract.
- NSW Device Bank is already absorbing/refurbishing government laptops at meaningful scale.
- CSU and NSW Health have controlled disposal pathways rather than casual donation.
- VendorPanel is the appropriate Dubbo Council future-procurement route.

Still worth obtaining directly

- current council-by-council NetWaste/Sims participation schedule
- current NetWaste e-waste contract number/start/end dates
- 3-year annual e-waste tonnes by every target facility
- exact current contractor for Dubbo after 30 June 2025
- exact current contractor for Gilgandra, Coonamble, Bogan, Forbes, Warren, Mid-Western and Narromine
- exact residual destination after Mudgee Tip Shop triage
- Parkes/Sircel formal contract/RFQ terms
- each council's ownership-transfer/reuse rights after deposit
- whether councils can lawfully divert reusable laptops to a reuse partner before recycling
- public-school dedicated e-waste vendor identity/contract terms if obtainable through procurement/GIPA.

Recommended regional data request

A single standard request can be sent to each Council and NetWaste:

For financial years 2023/24, 2024/25 and 2025/26, please provide the tonnes of electronic waste collected at each waste facility; the current e-waste collection/recycling contractor; contract/RFQ number and commencement/expiry date; the first downstream processing facility; whether the arrangement is under the NTCRS and which co-regulator; whether reusable devices are triaged or diverted before material recycling; the point at which ownership transfers; and whether Council may partner with a local reuse/refurbishment organisation to recover suitable devices before recycling.

That dataset would provide a much stronger basis for estimating the addressable supply around Dubbo than population-based modelling alone.
