Pack generated: 6 October 2026

Opening a Dubbo ITAD branch/hub — ranked pathways, exact public costs and process

Research date: 2 October 2026 (AEST)

Question

Of the Australian companies most comparable to Fliptech, which offers the easiest, cheapest and highest-payoff path to establishing a real Dubbo presence, and exactly what would the process and cost look like?

Critical distinction

There are three very different things that can be called a "Dubbo branch":

1. local sales / white-label front end — no local custody or processing;
2. secure collection / consolidation hub — local custody, but central processing elsewhere;
3. full processing branch — local intake, sanitisation, testing, refurbishment, remarketing preparation and residual recycling dispatch.

Those have radically different costs.

Also:

You cannot independently open a branded branch of Fliptech, WV, Renew IT, Shred-X, Iron Mountain, G1 or Greenbox without that company's written agreement.

For some companies the realistic path is a formal partner or white-label service relationship, not a franchise.

No shortlisted company publishes a franchise fee or a guaranteed Dubbo territory.

1. Overall recommendation — easiest / cheapest / best risk-adjusted payoff

1. G1 Asset Management — best overall low-cost route

Why #1 for the person trying to create a Dubbo operation

G1 publicly offers white-labelled ITAD services to IT service providers.

Its own page says it can provide:

- plain-clothed onsite service;
- unbranded disposal/data-destruction/recycling reports;
- collection;
- secure data erasure;
- recycling;
- reporting;

so an IT provider can integrate G1 behind its own client relationship.

Source:

<https://g1.com.au/solutions/it-service-providers/>

G1 also:

- operates processing facilities in Brisbane, Sydney, Canberra and Melbourne;
- services Australian metro and regional areas;
- offers asset buybacks;
- gives upfront buyback prices;
- uses Blancco/NAID/PSPF processes.

Sources:

- <https://g1.com.au/>
- <https://g1.com.au/contact/>
- <https://g1.com.au/service/corporate-and-education-it-asset-buybacks/>

Why this is easiest

You can test the Dubbo market without leasing a branch and without first recreating G1's security/certification stack.

A potential first version is:

Dubbo client

- local relationship / quote
- G1 performs approved collection or backend service
- G1 processes / sanitises / reports
- local operator keeps the customer relationship under the agreed commercial structure.

Exact public process

1. Have an ABN/business entity.
2. Contact G1 through its IT Service Providers page or quote form.
3. State that you want a white-labelled Western NSW ITAD service.
4. Ask G1 to define:

- wholesale/service pricing;
- local markup/reseller rules;
- customer ownership;
- who invoices the end client;
- buyback settlement;
- minimum regional volume;
- whether you can do first-mile collection;
- chain-of-custody requirements.

5. Start with no local processing and no warehouse.

6. Win 3–10 local business accounts.

7. Route jobs through G1 and record:

- assets/month;
- kilograms;
- pickup cost;
- G1 charge;
- local revenue/margin;
- resale/buyback value;
- repeat work.

8. Only after recurring volume is proven, ask G1 to approve:

- local secure staging;
- serial capture;
- local sanitisation;
- eventually a dedicated Dubbo node.

Cost

G1's commercial price is quote-only. No public franchise/partner fee is published.

The lowest public setup cost can therefore be extremely small:

- ABN: \$0 if a new ABN is required.
- 1-year business name: \$47 from 1 July 2026.
- New proprietary company if desired: \$636 registration, plus \$342 annual review.
- No local Blancco licence required if G1 performs sanitisation.
- No warehouse required initially.
- No staff required initially.

Sources:

- <https://business.gov.au/registrations/register-for-an-australian-business-number-abn>
- <https://business.gov.au/news/changes-for-businesses-from-1-july-2026>

Known statutory launch floor:

- sole trader + business name: \$47

- new proprietary company + business name: \$683 upfront (\$636 + \$47), plus the annual company review fee later.

Insurance and G1's wholesale/service pricing are quote-only and cannot be truthfully inserted as exact figures.

Payoff

No public G1 reseller margin is published.

The attraction is capital efficiency:

- no processing facility;
- no certification build;
- no sanitisation software purchase;
- no staff initially;
- enterprise-grade backend immediately available.

This is the best route to prove whether Dubbo customers will actually pay.

2. Greenbox — best formal partner program

Greenbox is the strongest company on the list for a documented formal partnership pathway.

Exact public partner process

Greenbox currently says:

1. Contact its sales team / partner page.
2. Receive a two-page Partnership Application.
3. Complete a 12-month business plan showing expected volume/business.
4. Supply three relevant references.
5. Supply three months of credit information.
6. Greenbox reviews the application.
7. It aims to notify applicants within 14 business days.
8. Accepted partners complete mandatory online training and quizzes through Greenbox's LMS.
9. Partnership operates under:
 - a Partnership MOU;
 - the agreed business plan;
 - Greenbox's partner rulebook;
 - preferred pricing.
10. Greenbox says the partner program itself does not require a long-term contract; a partner can leave the program.

Sources:

- <https://www.greenbox.com.au/faqs/>

- <https://www.greenbox.com.au/partners/>

Eligibility issue

Greenbox publicly says its program is for:

- distributors;
- resellers;
- OEMs.

A new stand-alone e-waste startup is therefore not automatically eligible.

The exact question is whether a Dubbo ITAD/refurb reseller would be accepted as a "reseller" for the program.

Published partner fee

No membership/application fee is publicly listed.

Do not write "\$0 partner fee" as a fact.

The correct statement is:

No public partner fee was found; commercial pricing appears inside the partner membership pack after approval.

Cheapest Greenbox path

Partner / local reseller, no warehouse.

Use Greenbox's national backend and preferred pricing first.

A physical Dubbo hub should come only after the 12-month business plan proves recurring volume.

Known public launch cost

Same business setup floor:

- ABN: \$0;
- business name: \$47/year;
- company if newly incorporated: \$636 + \$342 annual review.

Additional costs:

- insurance: quote-only;
- Greenbox partner/service pricing: not public;
- travel/local sales: variable.

Why this is #2

Advantages over Fliptech:

- actual partner program exists;
- application process is published;

- partner training exists;
- preferred pricing exists;
- no long-term contract is required by the program;
- Greenbox already runs multiple facilities.

Disadvantage:

- new operator may fail the reference/credit/business-volume requirements.

3. Fliptech — highest strategic upside, but more negotiation

Fliptech remains the strongest model fit for a small Dubbo reuse-first ITAD operation.

Its current public model includes:

- secure collection;
- data sanitisation;
- hardware buyback;
- paid/subsidised erasure;
- asset reporting;
- refurbishment;
- resale;
- donation;
- recycling.

Detailed file:

- FLIPTech-DUBBO-BRANCH-FEASIBILITY.md

Problem

No public:

- franchise program;
- partner application;
- branch application;
- reseller price list;
- regional operator scheme

has been found.

So this is not a form you can fill out tomorrow.

Exact practical process

Stage 1 — pitch a pilot, not a branch

1. Contact Fliptech's business development team.

2. Pitch:

"Central West / Orana secure ITAD collection and reuse pilot based in Dubbo."

3. Ask whether they already service:

- Dubbo;
- Orange;
- Bathurst;
- Mudgee;
- western NSW.

4. Establish regional pickup minimums and current logistics.

5. Ask whether Fliptech would permit a local person/business to:

- source clients;
- schedule collections;
- serialise assets;
- stage assets securely;
- eventually wipe/test/refurbish.

Stage 2 — written pilot agreement

Before touching customer assets, obtain written agreement covering:

- brand use;
- customer ownership;
- asset ownership;
- data liability;
- chain of custody;
- insurance;
- collection standards;
- buyback/resale settlement;
- which party invoices;
- warranty/ACL responsibility;
- failed sanitisation;
- downstream liability;
- geographic area;
- termination.

Stage 3 — 3-6 collection cycles

Run scheduled collection days and send equipment to Fliptech's approved processing route.

Measure:

- clients;
- assets;
- kg;
- transport;

- erasure success;
- reuse/resale rate;
- recovery value;
- net margin;
- repeat demand.

Stage 4 — secure Dubbo aggregation

Only after repeat demand:

- local secure staging;
- no processing unless approved;
- consolidated transport.

Stage 5 — local sanitisation/refurbishment

Fliptech must approve:

- wipe tools;
- reporting;
- staff;
- facility security;
- procedures;
- audit.

Stage 6 — branded branch

Only then negotiate:

- Fliptech signage/brand;
- territory;
- who pays rent/fitout;
- staff employment;
- ownership of stock;
- resale channels;
- long-term commercial agreement.

Cost

Pilot / no-premises model

Publicly known statutory costs:

- ABN: \$0;
- business name: \$47 if needed;
- company: \$636 if creating one.

Fliptech commercial terms: unknown.

Secure aggregation model

Current Dubbo business-storage examples:

- 18 m² from \$125/month incl. GST
- 32-36 m² from \$220/month incl. GST

Source:

<https://commercialdubbo.eldersrealestate.com.au/storage-sheds/>

Important:

- these are advertised for business storage;
- do not assume they permit electronics processing, public customer visits, charging or workshop activity;
- obtain written landlord/use approval.

If second-hand dealer licensing applies and the local entity acquires/resells electronic goods:

- 1-year NSW licence: \$692.

Source:

<https://www.nsw.gov.au/business-and-economy/running-a-business/industry-specific-business-requirements/pawnbrokers-and-second-hand-dealers/pawnbrokers-and-second-hand-dealers-fees>

Exact known annual subtotal — aggregation only

Using 18 m²:

- business name: \$47
- storage: \$1,500/year
- second-hand dealer licence if required: \$692
- known subtotal: \$2,239/year

Using 32-36 m²:

- business name: \$47
- storage: \$2,640/year
- licence if required: \$692
- known subtotal: \$3,379/year

These totals exclude:

- insurance;
- vehicle/fuel;
- freight;
- shelving;
- security improvements;
- parent-company fees;
- software;
- electricity.

If the parent company retains ownership and the local entity never buys/sells the prescribed goods, the licensing position may differ. Get NSW Fair Trading's answer in writing.

4. WV Technologies — strong branch structure, harder for an individual to initiate

WV currently operates six hubs across five states:

- QLD x2;
- NSW;
- ACT x2;
- VIC;
- WA (the public page labels six hubs across five states and lists six numbered hub entries, with QLD combined in one line).

Current page:

<https://wvtech.com.au/contact/>

WV's model includes:

- secure ITAD;
- data destruction;
- sanitisation;
- asset buyback;
- refurbishment/remarketing;
- recycling;
- ESG / Indigenous procurement.

Sources:

- <https://wvtech.com.au/solutions/>
- <https://wvtech.com.au/sustainability/>

How you could get a Dubbo WV hub opened

This is not a public franchise.

The realistic process is:

1. Contact WV business development.
2. Present western NSW market evidence.
3. Ask whether it uses:
 - employees;
 - subcontractors;
 - local operating partners

for regional work.

4. Offer a 3–6 cycle Dubbo collection pilot.
5. WV sets:
 - security standard;

- customer ownership;
 - sanitisation requirements;
 - reporting;
 - social-procurement outcomes.
6. Demonstrate recurring government/enterprise demand.
7. Submit a business case for:
- secure western NSW aggregation;
 - then local processing.
8. WV corporate decides whether to:
- lease premises itself;
 - employ a local manager;
 - contract a local operator.

Cost to you

Unknown until WV states the commercial structure.

If WV opens and funds its own branch, your personal capital requirement could be close to zero if you are an employee/manager.

If it requires you to fund a local company/site, use the physical-hub cost model later in this document.

Why not #1 despite strong network

There is no public WV franchise/partner onboarding comparable with Greenbox or G1's white-label MSP route.

5. Renew IT — excellent backend, likely corporate-led depot

Renew IT says it has:

- NSW;
- WA;
- VIC;
- New Zealand facilities;
- drop-off points in major Australian capital cities;
- more than 200 skilled professionals;
- six processing facilities across Australia/NZ.

Sources:

- <https://renew-it.com/>
- <https://renew-it.com/international/>

Its process:

- fleet buyback;

- NIST 800-88 sanitisation;
- refurbishment;
- resale;
- residual processing.

How a Dubbo depot could happen

1. Contact Renew IT enterprise/lifecycle sales.
2. Ask where Central West assets currently go.
3. Establish current Dubbo customer/tonnage volume.
4. Propose Dubbo intake/depot, not full materials processing.
5. Run a scheduled regional pickup trial first.
6. Demonstrate enough volume to make Dubbo cheaper than Lane Cove freight.
7. Renew IT decides whether:
 - its own depot;
 - drop-off partner;
 - 3PL;
 - local staff
 is appropriate.
8. Only later seek authorised sanitisation/refurbishment.

Cost

No franchise/depot fee is published.

You cannot calculate an exact personal startup figure without knowing whether Renew IT:

- funds the depot;
- uses a contractor;
- pays a lease;
- pays a local operator;
- expects the local partner to fund premises.

Therefore its cost-to-you is commercially unknown.

6. Shred-X — physically capable, but likely needs a broader Dubbo business case

Shred-X already has:

- 11 national facilities;
- NSW facilities/operations;
- explicit regional NSW service;
- e-waste / IT value recovery;
- sanitisation;

- buyback/refurbishment.

Sources:

- <https://www.shred-x.com.au/contact/>
- <https://www.shred-x.com.au/location/new-south-wales/>
- <https://www.shred-x.com.au/it-value-recovery/>

Process

1. Contact Shred-X's regional/business development team.
2. Ask which existing NSW facility services Dubbo.
3. Establish Dubbo revenue/route volume across:
 - secure document destruction;
 - hard drives/media;
 - e-waste;
 - ITAD.
4. Pitch a combined regional secure-destruction + ITAD node.
5. Run route-volume analysis.
6. If enough recurring route density exists, corporate prepares premises/staff business case.
7. Branch is likely company-controlled rather than user-owned.

Cost to you

No franchise path or public branch fee was found.

A Shred-X Dubbo branch is likely a corporate investment decision, so:

- personal startup capital may be zero if employed to run it;
- or impossible to price if they want a contractor/property contribution.

Why lower than Fliptech/G1/Greenbox

Shred-X can already service regional NSW from its network. A Dubbo building must improve route economics across multiple secure-waste streams, not simply prove there is some e-waste.

7. Iron Mountain / former ACT Logistics — biggest capability, least independently openable

Iron Mountain completed its acquisition of ACT Group in December 2025 specifically to expand Australian/APAC Asset Lifecycle Management.

Source:

<https://www.ironmountain.com/en-au/about-us/newsroom/press-releases/2025/december/iron-mountain-deepens-local-alm-practice-with-acquisition-of-act-group>

Iron Mountain now offers nationally:

- device retrieval;
- inventory;
- chain of custody;
- data sanitisation;
- reuse/redeployment;
- ITAD;
- remarketing;
- recycling.

Sources:

- <https://www.ironmountain.com/en-au/services/it-asset-lifecycle-management>
- <https://www.ironmountain.com/en-au/services/it-asset-lifecycle-management/alm-for-end-user-devices>

Process

You cannot realistically "buy an Iron Mountain Dubbo franchise" from any current public program.

The credible paths are:

Path A — employment / branch management

1. Present Dubbo business case to ALM regional management.
2. Show enterprise/government demand.
3. Iron Mountain internally approves facility.
4. Iron Mountain leases/fits the premises.
5. Apply for local operational/business-development role.

Path B — local logistics/subcontract vendor

1. Contact Australian ALM sales/procurement.
2. Ask whether regional collection uses approved subcontractors.
3. Become approved vendor if a program exists.
4. Perform only authorised first-mile activities.

Path C — enterprise anchor customer

The strongest branch trigger would be one or more large customers requiring:

- regional retrieval;
- secure storage;
- frequent IT refresh;
- data destruction.

Cost to you

Unknown and probably not a personal branch-capital model.

If Iron Mountain decides to open an owned facility, the company funds it.

8. Pure branch-likelihood ranking

This is the ranking for:

Which company has the strongest evidence it could physically establish a Dubbo site if the business case is good enough?

1. Greenbox
2. G1 Asset Management
3. WV Technologies
4. Fliptech
5. Shred-X
6. Renew IT
7. Iron Mountain / ACT

Reasoning:

- Greenbox has repeated branch expansion plus a formal partner mechanism.
- G1 proves an 11-50-person specialist can operate multiple facilities.
- WV already uses a multi-hub physical network.
- Fliptech is highly aligned but less branch-proven.
- Shred-X is highly branch-capable but can already route-service regional NSW.
- Renew IT prefers major depots/drop-off logistics.
- Iron Mountain has the capability but the least individually accessible branch model.

9. Ranking for YOU trying to make something happen with lowest effort/capital

This ranking is different.

1. G1 white-label

Lowest effort / lowest capital / fastest market test.

No facility required initially.

2. Greenbox partner

Best published formal partner route.

Application and training are explicit; no public partner fee found.

3. Fliptech regional pilot

Highest entrepreneurial upside if they agree, but more negotiation and uncertainty.

4. WV regional hub proposal

Strong network; likely corporate-led.

5. Renew IT depot proposal

Strong model; likely corporate-controlled.

6. Shred-X regional branch proposal

Would likely require a multi-service route case beyond e-waste.

7. Iron Mountain

Most corporate; least independently openable.

10. Highest-payoff ranking

No company publishes:

- local reseller margin;
- referral commission;
- branch manager pay;
- revenue share;
- regional exclusivity fee;
- buyback spread.

Therefore exact dollar payoff cannot be calculated from public data.

Anyone giving exact profits at this stage would be inventing them.

The best evidence-based payoff proxies are:

Highest entrepreneurial upside: Fliptech

If Fliptech agreed to:

- regional exclusivity;
- local collection;
- local testing/refurbishment;
- share of resale/buyback;
- customer ownership,

the local operator could participate in several revenue streams.

But none of those terms is currently promised.

Best risk-adjusted commercial opportunity: G1

Because:

- backend already exists;
- certification already exists;
- white-label service is explicitly offered;
- facility can be delayed until revenue exists.

Best formal reseller/partner platform: Greenbox

Because:

- formal partner onboarding;
- training;
- preferred pricing;
- MOU not long-term contract.

Highest corporate-scale upside: WV / Renew / Shred-X / Iron Mountain

But likely as:

- employee;
- local manager;
- approved vendor;

rather than an independent branch owner.

11. Exact public startup-cost models

Model A — no-premises white-label / sales operation

This is the recommended first test for G1, and potentially a starting model for Greenbox.

Government setup

If sole trader:

- ABN: \$0
- business name: \$47 / year

If new proprietary company:

- company registration: \$636
- business name if needed: \$47
- annual company review: \$342

Source:

<https://business.gov.au/news/changes-for-businesses-from-1-july-2026>

Facility

- \$0 local warehouse.
- Parent ITAD company collects/processes.

Sanitisation software

- \$0 locally if parent company performs it.

Staff

- owner-operated: \$0 payroll.

Exact known public subtotal

- sole trader + business name: \$47
- new company + business name: \$683 upfront
- first year's later company annual review: +\$342

Unknown

- insurance;
- G1/Greenbox service price;
- partner-required liability limit;
- fuel/sales;
- software/phone;
- accounting.

This is why this is the only route where you can responsibly test the market before spending thousands.

Model B — secure Dubbo aggregation only

No wiping/repair at the site. Assets are staged for consolidated transport.

Current Dubbo storage examples

Elders Commercial:

- 18 m²: from \$125/month incl. GST
- 32-36 m²: from \$220/month incl. GST

Source:

<https://commercialdubbo.eldersrealestate.com.au/storage-sheds/>

Known annual costs

18 m²:

- rent: \$1,500
- business name: \$47
- NSW second-hand dealer licence if legally required: \$692
- known subtotal = \$2,239

32-36 m²:

- rent: \$2,640
- business name: \$47
- licence if required: \$692
- known subtotal = \$3,379

Not included

- landlord commencement/bond fees;
- insurance;
- transport;

- shelves/cages;
- electricity;
- CCTV/access improvements;
- partner fees.

Storage sites must approve the actual use. "Business storage" does not automatically mean workshop/processing/customer access is permitted.

Model C — owner-operated real processing hub

Current Dubbo industrial market examples:

200 m²

13 McGuinn Crescent:

- \$395/week + GST
- annual base: \$20,540 + GST
- \$22,594 including GST

Source:

<https://www.realcommercial.com.au/for-lease/dubbo-nsw-2830/industrial-warehouse/>

169 m²

10/1 Capital Drive:

- \$25,480/year + GST
- \$28,028 including GST
- 2-5 year lease;
- outgoings additional.

Source:

<https://www.rhcommercial.com.au/dubbo/properties/10-1-capital-drive-dubbo-2830-new-south-wales>

Blanco example

An Australian reseller currently lists:

- SMB Select 50 bundle — \$982.30.

Source:

<https://shop.tech2000.com.au/brand/blanco/>

Confirm:

- GST;
- exact entitlement;
- whether it matches the parent ITAD company's required product/tenant.

Second-hand dealer licence

If required:

- \$692 / one year.

Business name

- \$47 / year.

Exact known subtotal using \$395/week warehouse

- warehouse incl GST: \$22,594
- business name: \$47
- licence: \$692
- listed Blancco 50 bundle: \$982.30

Known public-price subtotal: \$24,315.30

This is not an all-in launch quote.

Still unknown:

- commercial bond;
- lease outgoings;
- insurance;
- power;
- internet;
- alarm/CCTV;
- cages/shelving;
- workbenches;
- fire controls;
- tools/test equipment;
- van/vehicle/freight;
- signage;
- waste/recycling;
- planning/consent.

A real branch should not sign this lease until the parent company has approved the operating model.

12. Staffing cost if the hub is not owner-operated

As of 1 July 2026:

- National Minimum Wage: \$26.44/hour
- full time: \$1,004.90/week
- award-free casual: \$33.05/hour

Most employees are award-covered and may require a higher rate.

Sources:

- <https://www.fairwork.gov.au/pay-and-wages/minimum-wages>

- <https://www.fairwork.gov.au/newsroom/media-releases/2026-media-releases/july-2026/20260701-minimum-wage-increase-media-release>

Superannuation guarantee remains 12% and from 1 July 2026 Payday Super rules apply.

Source:

ATO current Payday Super guidance.

Legal-floor calculation — one full-time worker

Fair Work's published weekly full-time minimum is \$1,004.90. Using that published weekly figure:

- base wages: \$52,254.80/year
- 12% super: \$6,270.58
- wage + super floor: \$58,525.38/year

This excludes:

- workers compensation;
- payroll/admin;
- equipment;
- actual higher award rate;
- overtime/penalties.

20-hour/week casual

$20 \times \$33.05 \times 52$:

- wages: \$34,372
- 12% super: \$4,124.64
- wage + super = \$38,496.64/year

Hub + one full-time worker

Using the \$24,315.30 known owner-operated public-price subtotal:

$\$24,315.30 + \$58,525.38 =$

\$82,840.68/year known floor

before:

- insurance;
- outgoings;
- workers comp;
- fitout;
- power;
- transport;
- actual award premium.

Hub + one 20h casual

$\$24,315.30 + \$38,496.64 =$
 $\$62,811.94/\text{year known floor}$

before other costs.

13. Why "exact total cost" is not yet available

There are five numbers that no public research can supply:

1. parent-company branch/partner commercial terms;
2. insurance premium for this exact operation;
3. commercial lease bond/outgoings for the chosen premises;
4. local vehicle/freight requirement;
5. actual staff award/classification.

The companies themselves also do not publish reseller margins or regional branch economics.

Therefore the most precise truthful statement is:

Cheapest test

\$47 known statutory setup cost, plus insurance/partner quote.

Secure aggregation

\$2,239–\$3,379 known annual cost using current advertised small-storage prices and assuming the \$692 dealer licence applies.

Owner-operated industrial processing hub

\$24,315.30 known public-price annual floor, before major missing costs.

Hub + 20h casual

\$62,811.94 known annual floor, before missing costs.

Hub + full-time employee

\$82,840.68 known annual floor, before missing costs.

These are not "estimates pretending to be quotes". They are arithmetic from current public prices and explicitly identified assumptions.

14. Insurance — cannot honestly be assigned a fake exact number

Allianz currently says public/products liability pricing depends on:

- cover level;

- turnover;
- business type.

It offers \$5M, \$10M and \$20M liability limits.

Sources:

- <https://www.allianz.com.au/business-insurance/business-pack/public-liability.html>
- <https://www.allianz.com.au/business-insurance/business-pack.html>

A parent ITAD company may contractually require:

- public/products liability;
- goods in care/custody/control;
- professional/cyber coverage;
- goods in transit;
- workers compensation.

Get the required insurance schedule from the parent company before requesting a quote, otherwise you may buy the wrong policy.

15. Second-hand dealer licence — do not automatically add it to every model

Current NSW fee:

- \$692 for one year
- \$1,574 / 3 years
- \$2,456 / 5 years.

Source:

<https://www.nsw.gov.au/business-and-economy/running-a-business/industry-specific-business-requirements/pawnbrokers-and-second-hand-dealers/pawnbrokers-and-second-hand-dealers-fees>

It applies to businesses buying/selling prescribed used electronic goods unless an exemption applies.

If:

- the parent company owns all assets;
- you only provide collection/logistics;
- you never buy/sell them,

your exact licensing position may be different.

If:

- your entity acquires assets;
- refurbishes them;
- sells them,

the licence is much more directly relevant.

Get Fair Trading's answer in writing for the chosen contract structure.

16. Decision tree

If you want the least money and effort

G1 white-label first.

Do not lease anything.

Target 5 Dubbo businesses.

Get G1 wholesale/white-label quote.

Sell/coordinate the service.

Measure whether the demand is real.

If you want a documented formal partnership

Greenbox.

Apply through its partner program.

Build the required 12-month business plan around Central West volume.

Do not commit to a warehouse until Greenbox accepts the partnership and confirms the physical-site role.

If you want the highest entrepreneurial upside

Fliptech.

Pitch a Dubbo/Central West pilot and negotiate a local operating-partner structure.

The potential upside is larger because the proposed operation could eventually participate in:

- collection;
- data;
- refurbishment;
- resale;
- social reuse.

But the commercial structure does not yet exist publicly.

If you want a company-funded regional job/branch

Target:

1. WV Technologies
2. Renew IT
3. Shred-X
4. Iron Mountain

Pitch yourself as the local operator / business-development lead, not as a franchise buyer.

17. 90-day practical plan

Days 1-7 — no spending on premises

Contact:

1. G1
2. Greenbox
3. Fliptech
4. WV
5. Renew IT
6. Shred-X
7. Iron Mountain

Ask every company the same five gating questions:

1. Do you already service Dubbo?
2. What minimum recurring volume makes a regional hub economic?
3. Can a local operator sell/collect under your systems?
4. What can be done locally versus at your facility?
5. What exact insurance/security/commercial requirements apply?

Days 8-30 — get local demand evidence

Speak to 20-30 potential business clients.

Record:

- refresh cycle;
- laptops/desktops/year;
- servers/network equipment;
- present disposal vendor;
- current cost;
- data requirements;
- willingness to use a local secure service.

Do not collect equipment yet unless the legal/partner workflow is ready.

Days 31-60 — first white-label/pilot collections

Use the first company willing to approve the model.

No branch lease.

Measure:

- collection count;
- assets;
- kilograms;
- service revenue;
- buyback value;
- parent-company charge;
- transport;
- hours.

Days 61-90 — branch decision

Only move to a \$125-\$220/month storage hub if:

- multiple repeat clients exist;
- local staging materially reduces logistics;
- parent company approves it;
- insurance/planning/storage terms are clear.

Only move to a \$20k+ industrial lease after:

- recurring monthly revenue;
- enough asset flow to justify local processing;
- parent company approves local sanitisation/refurbishment;
- rent is a small enough share of gross margin.

18. Exact questions that reveal whether the branch makes money

Ask the parent ITAD company to quote these in writing:

1. price per regional pickup;
2. price per pallet/bin;
3. price per asset for sanitisation;
4. asset buyback schedule;
5. reseller/partner discount;
6. local operator commission/markup rights;
7. freight cost Dubbo → processing facility;

8. minimum free-pickup threshold;
9. share of remarketing proceeds;
10. rejected-asset/recycling charge;
11. liability for damaged/lost assets;
12. warranty responsibility;
13. required insurance limits;
14. minimum monthly volume for a dedicated hub;
15. whether Dubbo gets geographic exclusivity.

With those 15 numbers, a genuine profit-and-loss model can be calculated.

Without them, exact profit is unknowable.

19. Final ranking by pathway

Rank	Company	Easiest route	Initial local premises?	Public partner pathway?	Overall judgement
1	G1	white-label ITAD	No	white-label MSP service explicitly published	Best low-cost test
2	Greenbox	accredited partner	No initially	Yes – formal published program	Best formal partnership
3	Fliptech	negotiated regional pilot	No initially	No public program	Best entrepreneurial upside / strongest model fit
4	WV Technologies	company-backed regional hub	probably later	no public franchise	Strong national-hub candidate
5	Renew IT	regional depot/pilot	probably later	no public franchise	Strong mature backend
6	Shred-X	corporate regional branch	likely company-funded	no public franchise	Needs broader route economics
7	Iron Mountain	corporate ALM node/vendor	company-funded	no public franchise	Least independently openable

Bottom line

If the goal is to make a Dubbo ITAD operation real with the least money and least risk, do not start by opening a branch.

Start:

G1 white-label or Greenbox partner → win local accounts → prove asset volume → secure aggregation → local processing → branded hub only when the economics justify it.

A full industrial branch before customer evidence creates at least \$24,315.30 of identifiable annual cost before the major expenses are even known.

A white-label market test can start with essentially only the business/insurance structure and no warehouse.

That difference is why the partnership-first path has the highest risk-adjusted payoff.
