Source commit: c2103b6090c8

Pack generated: 6 October 2026

Could an existing Australian e-waste organisation expand to Dubbo?

Research date: 2 October 2026

Question: Could an existing Australian e-waste / ITAD / device-reuse organisation expand into Dubbo instead of Dubbo eWaste having to build every capability itself?

Executive answer

Yes — several already have operating models that could extend into Dubbo.

But “expand to Dubbo” can mean very different things:

1. serve Dubbo remotely using existing trucks/reverse logistics;
2. add a Dubbo collection partner/drop-off point;
3. use a Dubbo business as a local collection/refurbishment/subcontracting partner;
4. open a local depot/warehouse;
5. build a full processing plant.

The first three are realistic now for several organisations. A full processing plant is much harder and would need enough regional feedstock, industrial premises, anchor contracts and capital.

No organisation researched currently advertises a public franchise program or a confirmed plan to open a Dubbo branch.

The strongest near-term opportunities are therefore partnerships rather than waiting for a national company to open a standalone branch.

Why Dubbo is genuinely credible as a regional e-waste location

NSW Government's Invest Regional NSW site specifically promotes e-waste recycling in Dubbo as an investment opportunity.

It highlights:

- Dubbo's position as a major regional centre;
- Newell, Golden and Mitchell Highway connections;

- rail connection to east-coast cities and ports;
- air links;
- industrial-zoned land;
- the ability to aggregate e-waste outputs such as metals, plastics, glass and circuit boards.

The NSW Government fact sheet says Dubbo's location creates multiple opportunities for e-waste recycling.

Sources:

- <https://www.investregional.nsw.gov.au/opportunities/dubbo>
- https://www.investregional.nsw.gov.au/sites/default/files/publications/2024-08/Dubbo_ewaste_recycling.pdf

That does not prove a processor would be commercially viable, but it means the idea of a regional e-waste hub in Dubbo is not speculative marketing invented by this project; it is an opportunity NSW Government itself promotes.

Best expansion candidates

1. WorkVentures — strongest reuse-first strategic fit

What it already does

WorkVentures operates CircularIT/ITAD services that:

- collect end-of-life corporate technology;
- maintain chain of custody;
- securely wipe or destroy data;
- test and grade assets;
- refurbish devices;
- resell, redeploy or donate viable equipment;
- recycle failures through certified downstream partners;
- provide reuse/recycling/social-impact reporting.

Most importantly for Dubbo, WorkVentures says it provides national collection coverage across metropolitan and most regional areas of Australia.

It says collection costs can be subsidised or completely offset where devices have residual value or are donated in good working condition.

Sources:

- <https://workventures.com.au/circularit/>
- <https://workventures.com.au/refurbishment/>
- <https://workventures.com.au/decommissioning/>

Could it expand to Dubbo?

Already serviceable: HIGH.

It can already collect in regional Australia.

Dubbo local partnership/hub: HIGH potential.

A local operator could potentially:

- aggregate business donations;
- pre-inventory assets;
- handle regional pickup coordination;
- act as a local logistics/refurbishment partner if WorkVentures agreed;
- connect local community organisations into the Device Bank/National Device Bank ecosystem.

Full WorkVentures-owned branch: MEDIUM/LOW without anchor volume.

Why this is a particularly good match

This is the closest mature organisation to the proposed Dubbo eWaste model:

reuse first + professional ITAD + community impact + resale/redeployment + recycling only when reuse fails.

WorkVentures' public logistics data reports significant reuse: its logistics page states 40% of units collected were repurposed, 52% responsibly e-wasted and 8% in inventory in the reported dataset.

Best approach

Do not ask:

Will you open a branch in Dubbo?

Start with:

Would WorkVentures consider a Dubbo/Orana regional collection or refurbishment partnership for corporate/SME IT assets, with local intake and consolidated transport into CircularIT or the Device Bank network?

2. Ecoactiv — effectively already expanded into Dubbo

What it already does

Ecoactiv is an approved NTCRS co-regulatory arrangement and offers e-waste pickup across NSW.

Its current NSW service page explicitly lists Dubbo among the regional NSW locations it services.

It supports:

- NTCRS electronics;
- broader e-waste;
- household/business/school collection;
- pickup and drop-off logistics;

- AS/NZS 5377-certified processing networks.

Sources:

- <https://ecoactiv.com.au/e-waste-ntcrs-sydney/>
- <https://ecoactiv.com.au/ntcrs/>
- <https://ecoactiv.com.au/e-waste-electronic-recycling-disposal/>

Could it expand to Dubbo?

Service expansion: ALREADY PRESENT.

Ecoactiv already advertises pickup in Dubbo.

The meaningful next step would be:

Dubbo collection/drop-off partner: HIGH potential, subject to Ecoactiv agreeing.

Fit with Dubbo eWaste

Ecoactiv is much more recycling/logistics-focused than the proposed selective refurb/resale operation.

Best use:

Dubbo eWaste handles reuse/refurbishment first → Ecoactiv handles eligible residual e-waste.

Why partnership may be better than competition

Ecoactiv does not need a whole processing branch in Dubbo to serve it. Its business model already relies on reverse logistics and downstream partners.

A local Dubbo node could reduce collection friction without duplicating industrial processing.

3. Ecycle Solutions — strong candidate for a Dubbo collection node

What it already does

Ecycle Solutions is:

- an approved NTCRS co-regulator;
- a national e-waste operator;
- backed by QLS Group;
- operating 300+ collection locations;
- using 150+ trucks on the road daily;
- designed to service metropolitan, regional and remote communities.

It explicitly says its reverse-logistics model allows it to reach locations that many recyclers cannot.

Sources:

- <https://ecyclesolutions.net.au/>
- <https://ecyclesolutions.net.au/ewaste-recycling/ewaste-recycling-solutions>
- <https://ecyclesolutions.net.au/assets/main/Ecycle-Solutions-Capability-Statement.pdf>

Could it expand to Dubbo?

Regional servicing: HIGH — its model is already built for this.

New Dubbo drop-off/collection partner: HIGH potential.

Dedicated processing branch: LOW/MEDIUM.

Because its advantage is an existing national reverse-logistics network, it may gain more from putting a cage/drop-off partnership in Dubbo than constructing another processing facility.

Dubbo eWaste fit

Best as:

- NTCRS residual recycler;
- cage/pickup provider;
- downstream partner for TVs/computers/printers that fail reuse triage.

Less aligned with:

- resale;
- local refurbishment.

4. TechCollect / ANZRP — strongest free formal collection-partner model

What it already does

TechCollect explicitly invites:

- local councils;
- waste-management organisations;
- selected retail/business partners

to become collection partners nationwide.

It states partnership is free and can include:

- signage;
- marketing support;
- staff training;
- collection units;

- transport;
- recycling.

Its current NSW collection list includes regional councils but does not currently list Dubbo.

Sources:

- <https://techcollect.com.au/our-partners/partner-with-us/>
- <https://techcollect.com.au/our-partners/>

Could it expand to Dubbo?

Dubbo collection point: VERY HIGH structural fit.

There is a literal published partnership pathway for exactly this type of expansion.

Important limitation

TechCollect is a recycling stream, not a resale stock source.

Existing project research found TechCollect directs still-useful equipment toward reuse before surrender; once material is surrendered into the TechCollect recycling stream, it should be treated as recycling material.

So the right sequence for Dubbo eWaste would be:

intake → reuse triage → viable assets retained for legitimate reuse → genuine end-of-life NTCRS material enters TechCollect

subject to TechCollect's agreement and all ownership/contract rules.

Best target

A future approved commercial premises or Council/waste partnership is more likely to suit TechCollect than a small residential shed.

5. PonyUp for Good — strong commercial reuse-first partner

What it does

PonyUp for Good describes itself as a social enterprise handling decommissioned corporate technology across Australia.

Its model:

- collect retired corporate technology nationwide;
- secure data erasure;
- remarket/refurbish reusable assets;
- recycle failures through accredited partners;

- report reuse vs recycling outcomes;
- donate 50% of profits to SecondBite.

PonyUp says its primary focus is technology about 2-5 years old and publicly reports a reuse-first mandate.

Its published impact page says 32.5% of collected equipment was reused rather than recycled in the reported program.

Sources:

- <https://www.ponyupforgood.com/>
- <https://www.ponyupforgood.com/faq>
- <https://www.ponyupforgood.com/1-million-meals>
- <https://www.ponyupforgood.com/telstraenterprise>

Could it expand to Dubbo?

Serve corporate clients in Dubbo: HIGH.

It says collections occur across Australia.

Dubbo local operating partner: MEDIUM/HIGH potential, although no public franchise or regional-depot program is advertised.

Standalone branch: LOW/MEDIUM.

Why it fits

PonyUp is extremely close to the future Dubbo commercial pitch:

secure pickup + reuse first + resale + certified downstream + social impact reporting.

A regional partnership could give PonyUp cheaper local collection/consolidation while Dubbo eWaste learns from a mature reuse-first operator.

6. Renew IT — strong candidate for regional ITAD, weaker case for a public drop-off branch

What it already does

Renew IT:

- is headquartered in Lane Cove NSW;
- started from a garage;
- operates multiple facilities across Australia/NZ;
- offers IT asset buyback;
- sanitises data to NIST 800-88;
- refurbishes hardware for resale;

- processes older non-resale equipment through circular downstream systems;
- serves SMEs, corporations, schools and universities.

Renew IT says the 2021 acquisition of Verser enabled it to expand services nationwide.

Sources:

- <https://renew-it.com/>
- <https://renew-it.com/about-us/>
- <https://renew-it.com/international/>

UNSW's profile of founder James Lancaster says the original business model was collecting/refurbishing corporate laptops, wiping data and selling functional equipment to second markets before later adding advanced materials processing.

Source:

- <https://www.businessthink.unsw.edu.au/articles/circular-economy-e-waste-recycling-renew-it>

Could it expand to Dubbo?

Corporate ITAD service into Dubbo: HIGH.

Local consolidation/drop-off partner: MEDIUM/HIGH.

Dedicated Renew IT processing facility: MEDIUM only if enough institutional/commercial volume exists.

Renew IT's facility growth has followed large-scale ITAD volume and acquisitions, not a public franchise model.

Why Dubbo may eventually appeal

Dubbo could aggregate:

- government;
- education;
- health;
- SME;
- agriculture;
- regional business fleet replacements.

But the feedstock needs to be proven first.

7. FlipTech Australia — one of the most interesting “could grow regional” candidates

What it does

FlipTech:

- began as a young NSW e-waste/refurbishment startup;
- collects business/government IT;
- offers e-waste bins;
- securely erases data;
- refurbishes/reuses viable assets;
- recycles failures;
- works with Royal Far West to redirect devices into rural/community use.

Sources:

- <https://www.fliptech.com.au/bins>
- <https://www.fliptech.com.au/articles/53b6be97-e467-4c86-9dc7-7bc1d9dff119>
- <https://www.fliptech.com.au/articles/3b6db187-5654-4e59-9515-e3202851afce>

Public media has described FlipTech as having nationwide clients after growing from a garage-based NSW startup.

Could it expand to Dubbo?

Regional collection/service: MEDIUM/HIGH.

Local Dubbo satellite/partner: MEDIUM.

Full processing branch: LOW/MEDIUM at first.

Why it is interesting

FlipTech is smaller and closer to the stage/model Dubbo eWaste is considering than SK Tes or Renew IT.

A collaboration might be more realistic than convincing a huge multinational to open a branch.

Possible model:

Dubbo eWaste = Orana intake/triage/logistics partner

FlipTech = secure ITAD/refurbishment/remarketing/downstream network

No public franchise/partner program was found, so this would require a direct commercial approach.

8. Good360 + WorkVentures + Good Things / Device Bank — Dubbo distribution/refurbishment ecosystem, not an e-waste branch

What it does

Good360's digital-divide program:

- accepts newer usable corporate devices;

- uses a national network of refurbishment partners;
- securely wipes/tests/refurbishes them;
- distributes them through charities and disadvantaged schools.

Good360 says the service is Australia-wide and can arrange pickup depending on location.

Sources:

- <https://good360.org.au/digital-divide/>
- <https://good360.org.au/faq/>

The NSW Device Bank is delivered by WorkVentures with Good Things Australia and distributes refurbished NSW Government laptops through community organisations.

Source:

- <https://workventures.com.au/nswdb-eoi/>

Could it expand to Dubbo?

Community distribution into Dubbo: HIGH.

Local approved community partner: HIGH where an eligible NFP/charity participates.

Local commercial e-waste branch: NOT the model.

Opportunity for Dubbo eWaste

A future structure could be:

Dubbo eWaste / local ITAD partner → refurbishment/data service

local NFP/community organisation → recipient/distribution partner

Good360/Device Bank → social infrastructure

But a private commercial startup cannot simply declare itself a Device Bank distribution site.

9. MobileMuster — very easy to extend locally, but wrong for reuse stock

What it does

MobileMuster allows organisations to join as registered collection partners.

A site may:

- become a public collection point; or
- remain non-public and send its own collected devices.

MobileMuster provides free pickups for registered sites.

Sources:

- <https://www.mobilemuster.com.au/join-us/>
- <https://www.mobilemuster.com.au/book-a-pickup/>
- <https://www.mobilemuster.com.au/workplaces/>

Could it expand to Dubbo?

Yes — extremely easily via collection partnership.

Critical limitation

The MobileMuster partner terms explicitly require the partner to transfer ownership of collected phones/components to AMTA and agree not to reuse or resell them.

Therefore MobileMuster should only receive phones that have already failed Dubbo eWaste's legitimate reuse/repair pathway.

Correct model:

good phone → reuse/refurbish/resell
true end-of-life phone → MobileMuster

It cannot be a feedstock source for Dubbo eWaste.

10. SK Tes — can service Dubbo, but a processing branch would need major volume

What it already does

SK Tes has:

- ITAD;
- secure data destruction;
- testing/refurbishment;
- remarketing;
- e-waste recycling;
- reverse logistics.

Its Australian facilities include Sydney, Melbourne and Brisbane.

It operates Microsoft's enterprise ITAD service in Australia, including:

- collection;
- secure sanitisation;
- refurbishment for reuse;
- remarketing;
- recycling.

Sources:

- <https://www.sktes.com/>
- <https://www.sktes.com/global-facilities>
- <https://www.sktes.com/en-au/microsoft-it-asset-disposition-services-for-enterprises>

SK Tes is also a NSW Government supplier.

Source:

- <https://buy.nsw.gov.au/supplier/profile/184365>

Could it expand to Dubbo?

Serve large Dubbo clients: HIGH.

Regional collection/subcontract logistics: HIGH.

Full ITAD processing branch: LOW/MEDIUM unless anchor contracts justify it.

SK Tes' model is enterprise-scale. It is more likely to send secure logistics into Dubbo and process assets at an existing facility than open a small shopfront.

Longer-term reason to watch them

SK Tes has demonstrated willingness to invest in NSW processing infrastructure, including proposed battery-recycling development at Heatherbrae.

That proves it can expand physically in NSW when the scale/business case is large enough.

11. Sircel — geographically compelling, but financially the riskiest candidate right now

Why it looks ideal geographically

Sircel already operates a processing site at Parkes, NSW and says it:

- collects from clients using its own fleet or trusted logistics partners;
- serves councils, government and corporate clients;
- prioritises asset reuse through its ITAD team;
- processes end-of-life e-waste at its facilities.

Sources:

- <https://sircel.com/contact-us/>
- <https://sircel.com/services/>
- <https://sircel.com/how-we-work/our-process/>

It has also historically demonstrated physical expansion through acquisitions and new processing capability.

But current corporate status matters

Sircel Limited and related entities entered receivership and voluntary administration on 31 October 2025.

Its November 2025 update said operations continued at all sites.

In June 2026, administrators/receivers were still working through sale/recapitalisation proposals; public insolvency reporting said a viable rescue outcome had not yet been settled at that point.

Sources:

- <https://sircel.com/2025/11/17/update-sircel-operations/>
- ASIC/administrator notices
- June 2026 insolvency reporting.

Could it expand to Dubbo?

Sircel service from Parkes: HIGH structural fit.

New Dubbo branch right now: LOW / too uncertain.

Future Dubbo satellite after restructuring/new ownership: MEDIUM/HIGH strategic logic.

Best near-term approach

Do not build the Dubbo plan around Sircel opening a new branch while its corporate future remains unsettled.

Instead ask whether:

- current operations can collect/consolidate Dubbo material;
- Dubbo could become a partner collection/triage point;
- a future owner would be interested in an Orana regional satellite.

12. Australian Metal Recycling — already physically in Dubbo

AMR is not an expansion candidate because it already operates the former Matthews yard in Dubbo.

The question is whether it could expand its service upward into reuse/ITAD, not geographically into Dubbo.

Potential future partnership:

Dubbo eWaste handles reuse/data/repair

AMR handles residual e-waste/scrap streams

or:

AMR refers reusable IT to Dubbo eWaste before commodity processing, if contracts/ownership/planning allow.

This is strategically more realistic than treating AMR as a competitor that needs another branch.

See:

- MATTHEWS-INFRABUILD-AMR.md
- AMR-DUBBO-DOWNSTREAM-FORENSIC.md

What expansion model is most realistic?

Model A — collection partner / local node

Most realistic immediately.

Potential organisations:

- TechCollect
- Ecycle Solutions
- Ecoactiv
- MobileMuster (dead phones only)

Dubbo provides:

- secure local collection point;
- storage/cage;
- basic separation;
- consolidation.

National operator provides:

- transport;
- processing;
- compliance;
- reporting.

Advantage

Very low capital.

Problem

Most of these pathways are recycling, not resale/reuse businesses.

Model B — local reuse/refurbishment + national downstream partner

Best fit with the current Dubbo eWaste idea.

Potential partners:

- WorkVentures
- PonyUp for Good
- FlipTech
- Renew IT
- Good360/Device Bank ecosystem.

Dubbo eWaste would do some combination of:

- local relationships;
- pre-screening;
- intake;
- inventory;
- basic test/triage;
- local refurbishment;
- local resale/donation.

National partner could provide:

- higher-assurance data processing;
- bulk resale channels;
- corporate reporting;
- downstream recycling;
- overflow logistics.

This is probably the most valuable partnership model to pursue.

Model C — local subcontractor for national ITAD jobs

Potential partners:

- WorkVentures
- Renew IT
- SK Tes
- PonyUp
- FlipTech
- possibly Sircel after its corporate position stabilises.

Example:

A national company wins an asset-disposal job for:

- a Dubbo business;
- regional government office;
- bank;
- telco;
- health provider.

Instead of sending Sydney technicians for every job, an approved local partner could:

- attend site;
- inventory;
- decommission;
- palletise/secure assets;
- coordinate transport.

A mature Dubbo eWaste operation could eventually bid to become that regional field partner.

This may be more commercially realistic than opening a national operator's branded branch.

Model D — actual industrial processing facility

Potentially capable organisations:

- Renew IT;
- SK Tes;
- a restructured/new-owner Sircel;
- Ecycle Solutions;
- another major recycler.

Dubbo has a strategic case because NSW Government explicitly markets it as an e-waste recycling opportunity.

But a processing plant would need evidence of:

- regional tonnage;
- commercial/institutional contracts;
- Council/NetWaste feedstock;
- industrial land;
- EPA/planning approvals;
- skilled staff;
- downstream/offtake;
- transport economics;
- capital.

The current repo does not yet prove enough guaranteed feedstock for this step.

Organisation comparison

Organisation | Already able to serve Dubbo? | Easy local collection partner? | Reuse / resale fit | Realistic new Dubbo processing branch now? | Best Dubbo role

WorkVentures | Yes, national/regional collection | Potentially | Very high | Low/medium | reuse-first ITAD/refurb partner

Ecoactiv | Yes, explicitly lists Dubbo | Likely / worth asking | Low/medium | Low | NTCRS/residual recycler

Ecycle Solutions | Yes, national regional/remote logistics | High | Low | Low/medium | free NTCRS collection node

TechCollect | National network | Very high; published partner program | Low after surrender | Low | formal NTCRS collection partner

PonyUp for Good | Yes, Australia-wide collections | Medium/high | Very high | Low | corporate reuse/remarketing partner

Renew IT | Nationwide ITAD capability | Medium | Very high | Medium if anchor volume | enterprise ITAD/refurbishment

FlipTech | Potentially via NSW/national clients | Medium | High | Low/medium | NSW regional reuse/ITAD partner

Good360 / Device Bank | National/NSW community networks | Via eligible community partners | Very high social reuse | Not applicable | local device redistribution ecosystem

MobileMuster | Yes | Very high | None once surrendered | Not applicable | dead-phone residual stream

SK Tes | Yes for enterprise jobs | Via logistics/subcontracting | High | Low/medium | large institutional ITAD

Sircel | Parkes + logistics network | Structurally yes | High | Low now due administration | future regional processor/partner

AMR | Already in Dubbo | Already local | Low currently | Already present | residual recycler / potential reuse referral

Who should Dubbo eWaste contact first?

1. WorkVentures

Reason:

- closest reuse-first model;
- national regional collection;
- CircularIT;
- NSW Device Bank;
- resale/donation/recycling all supported.

Ask about:

- Orana regional intake/refurbishment partnership;
- local field service/subcontracting;
- Device Bank/community pathways;
- SME/corporate collection consolidation.

2. TechCollect

Reason:

- explicit free collection-partner program;
- Dubbo currently absent from its public NSW collection list.

Ask:

- eligibility for a Dubbo collection site;
- minimum cage/pickup volume;
- whether a reuse-first intake business can transfer only failed NTCRS equipment after triage;
- whether a commercial site rather than Council can qualify.

3. Ecycle Solutions

Reason:

- 300+ points;

- reverse logistics;
- regional/remote model;
- NTCRS co-regulator.

Ask:

- whether they want a Dubbo collection/drop-off host;
- free cage/pickup thresholds;
- eligible residual streams;
- reporting.

4. Ecoactiv

Reason:

- it already advertises Dubbo pickup.

Ask:

- who currently performs the Dubbo leg;
- whether a local consolidation partner would improve its service;
- whether Dubbo eWaste could become a local reuse-first collection partner while Ecoactiv receives genuine recycling residuals.

5. PonyUp for Good

Reason:

- very strong reuse-first corporate model;
- national collections;
- social impact.

Ask:

- whether it uses regional field/logistics partners;
- whether Dubbo could aggregate/decommission Orana corporate assets;
- commercial arrangements/revenue split;
- reuse criteria.

6. FlipTech

Reason:

- NSW-founded;
- closer in scale/culture to Dubbo than a multinational;
- bins, ITAD, secure wipe, resale/donation;
- rural-community relationship through Royal Far West.

Ask whether FlipTech wants:

- a Dubbo/Western NSW collection partner;
- a satellite intake hub;
- referral partnership;

- subcontractor for regional corporate jobs.

7. Renew IT

Reason:

- genuine mature Australian ITAD business;
- started small and scaled;
- strong remarketing/refurbishment capability.

Ask:

- regional collection/field-service partnership;
- asset buyback for Dubbo businesses;
- minimum commercial volume;
- whether a Dubbo consolidation depot could make sense after volume is proven.

Organisations not to approach as if they were a franchise

No evidence found that the following offer a normal franchise model:

- Sircel
- WorkVentures
- Renew IT
- TechCollect
- Ecoactiv
- Ecycle Solutions
- PonyUp
- FlipTech
- SK Tes.

So avoid:

“Can I buy a Dubbo franchise?”

Use:

“Would you consider a Dubbo/Orana collection, logistics, refurbishment or regional-service partnership?”

That matches how these organisations actually scale.

What would make a national operator say yes?

The pitch needs evidence, not just “Dubbo needs e-waste recycling”.

Build these first:

1. Verified local supply

- first 20-30 device pilot;
- enquiries;
- businesses wanting pickups.

2. Regional tonnage

- Dubbo/Wellington;
- Narromine;
- Parkes;
- Forbes;
- Warren;
- Bogan;
- Coonamble;
- Gilgandra;
- Mid-Western.

3. Anchor customers

- SMEs;
- MSPs;
- corporate offices;
- Council;
- approved education/health/government work.

4. Premises

- if scaling beyond home pilot, compliant industrial/storage site.

5. Clear role

- local collection;
- secure intake;
- reuse triage;
- field decommissioning;
- data handling;
- consolidated freight.

6. Transport saving

- demonstrate why having someone in Dubbo is cheaper/better than sending staff/trucks from Sydney/other facilities for every small job.

Strongest strategic idea

The most realistic path is not:

Dubbo eWaste versus the big Australian recyclers.

It is:

Dubbo eWaste becomes the regional front end; a larger organisation becomes the back end.

For example:

Dubbo / Orana businesses

↓

Dubbo eWaste — relationships, pickup, intake, asset inventory, reuse triage, local refurbishment

↓

WorkVentures / PonyUp / FlipTech / Renew IT — overflow ITAD, resale markets, institutional reporting

↓

TechCollect / Ecycle / Ecoactiv / AMR / specialist processors — genuine end-of-life residual recycling

That lets Dubbo keep more of the reuse value locally while avoiding the enormous capital cost of industrial recycling.

Key caveats

- A local collection partnership does not automatically solve the residential-shed planning issue.
- Material collected under an NTCRS/MobileMuster scheme may become scheme-owned recycling material and should not be pulled back out for resale unless the agreement expressly allows it.
- Data-bearing business assets need documented chain of custody.
- Some national operators may prefer direct collection rather than subcontractors.
- A processing facility is a completely different planning/EPA/capital project from the current Phase 0 concept.
- Sircel's operational/corporate future should be checked again before relying on it for long-term commitments.
