Pack generated: 6 October 2026

Fliptech Australia deep dive — could a Dubbo branch work?

Research date: 2 October 2026 (AEST)

Question: What exactly is Fliptech Australia, how does its reuse/ITAD model work, and is there a credible case for a Fliptech presence in Dubbo?

Executive verdict

Short answer

Yes — a Fliptech operation in Dubbo is operationally plausible, and Dubbo is unusually well aligned with the type of regional expansion Fliptech has talked about.

However:

No public evidence was found that Fliptech has announced a Dubbo branch, offers franchises, licenses its brand to local operators, or currently operates any branch outside its Brookvale base.

The public evidence supports a more realistic first step than a conventional "branch":

1. regional collection / ITAD hub
2. Fliptech-authorised local operating partner
3. secure satellite depot with scheduled transport to Brookvale
4. only later, if volume proves sufficient, a full secure processing branch

This is because Fliptech's business is not primarily a walk-in e-waste shop. Its current positioning is:

corporate IT decommissioning + secure collection + data sanitisation + asset value recovery + reuse/donation + recycling + reporting.

Dubbo has a credible market for that service, but the missing information is commercial:

- how much regional volume Fliptech already handles;
- its minimum profitable pickup size;
- asset resale margins;
- transport costs;
- whether Fliptech wants owned branches, partners or simply nationwide collection contracts.

A direct discussion with Fliptech is required before treating a Dubbo branch as an actual opportunity.

1. Current corporate identity

Legal entity: FLIPTECH AUSTRALIA PTY LTD

ABN: 54 653 401 024

ACN: 653 401 024

ABN status: active from 3 September 2021

GST: registered from 12 January 2023

Current main business location: NSW 2097

Registered business name: FLIPTECH RECYCLING

ABR history shows the entity changed name from:

FLIPTECH RECYCLING PTY LTD.

to:

FLIPTECH AUSTRALIA PTY LTD

on 9 July 2025.

Source:

<https://abr.business.gov.au/ABN/View?id=54653401024>

Public operating base

Fliptech's current LinkedIn page identifies:

- headquarters: Brookvale, NSW
- primary location: Brookvale NSW 2100
- industry: Technology, Information and Media
- privately held
- company-size band: 11-50 employees

Source:

<https://au.linkedin.com/company/fliptech-australia>

No second physical Fliptech location was found in the current public material reviewed.

2. How Fliptech started

There are useful lessons in Fliptech's origin because it began far smaller than the current corporate ITAD operation.

Public award/media material says Austin Turpin began Fliptech as a teenager after noticing discarded electronics and developed it from a small/garage-scale operation.

A 2025 NSW Young Achiever Awards profile said:

- Austin started Fliptech at around age 14;
- by age 20 he led an eight-person team;
- the business had processed 50+ tonnes of e-waste;
- Fliptech worked with major corporations;
- it was donating refurbished equipment through Royal Far West.

These are dated 2025 figures, not current 2026 headcount/tonnage.

Source:

<https://awardsaustralia.com/young-achiever-awards/nsw/previous-winners/>

A Daily Telegraph profile described Fliptech as having:

- grown from a garage operation;
- gained nationwide clients;
- refurbished or recycled retired business/government computers;
- securely sanitised data before resale;
- offered affordable/free collection depending on the job;
- resold refurbished devices at substantial discounts to original retail pricing.

Source:

Daily Telegraph / Manly Daily profile, 2024-25 search result.

Historical expansion intent

A 2020 Spotify episode of the Killoway Report described Austin as:

- running FlipTech Recycling to reduce technology waste around NSW;
- looking to scale to a national level in the near future.

Spotify:

<https://open.spotify.com/show/4u5ci9897ICp2uuNmi8AOA>

Episode:

Ep.7 Talking with Young Entrepreneur Austin Turpin — 18 September 2020.

This is historical evidence of expansion ambition, not proof of a current branch strategy.

3. What Fliptech actually sells

Fliptech should be understood as an IT asset disposition / decommissioning company, not merely an e-waste recycler.

Current public material shows several service layers.

3.1 IT decommissioning

Fliptech markets secure and accountable handling of end-of-life IT equipment for organisations.

Current LinkedIn material says the company also supports organisations through:

- IT upgrades;
- asset decommissioning;
- installation;
- planning;
- workspace handover.

That means the business can get involved at the refresh event, before old devices become anonymous waste.

Source:

<https://au.linkedin.com/company/fliptech-australia>

3.2 Hardware buybacks and value recovery

A current Fliptech sales job advertisement says sales staff pitch tailored solutions including:

- hardware buybacks
- subsidised erasure
- paid services

This is one of the clearest public clues to the business economics.

The model is therefore not simply:

charge a disposal fee.

It can also be:

recover asset value from the equipment and use that value to offset service/data-erasure costs.

Source:

current Fliptech Australia sales-role listings indexed by Indeed.

This is very close to the commercial logic being considered for Dubbo eWaste.

3.3 E-waste bins

Fliptech supplies e-waste bins to buildings.

Its published process is:

bin delivered

→ client fills it

→ Fliptech collects/replaces it

→ material goes to Fliptech's facility

→ e-waste is sorted

- data-bearing assets are securely erased
- remaining materials enter recycling.

Source:

<https://www.fliptech.com.au/bins>

This is a recurring service model rather than one-off public drop-off.

4. Secure data handling is central to the brand

Fliptech repeatedly differentiates itself through data security.

Its published security process says it uses:

- unmarked/locked collection vehicles;
- secure transport;
- a controlled facility;
- 24/7 surveillance;
- restricted access to data-handling areas;
- software-based data erasure;
- NIST 800-88 / DoD-aligned methods;
- client certificates after sanitisation/destruction.

Source:

<https://www.fliptech.com.au/articles/8e4e2ca7-22e2-4d68-bf22-d0420c297db4>

Important current example:

Konica Minolta's 2026 Rethink e-Recycling Drive says Fliptech will provide eligible participating businesses with:

- secure data erasure;
- NIST 800-88 or other certified methods;
- erasure certificates;
- asset reports.

It also says applicable devices may be:

- refurbished;
- reused through donation;
- reused through official resale channels.

Source:

<https://www.konicaminolta.com.au/promotions/rethink-e-recycling-2026>

Dubbo implication

A genuine Fliptech-branded Dubbo site could not simply be:

a shed where computers are collected.

To preserve Fliptech's stated value proposition it would need:

- documented chain of custody;
- appropriate security;
- controlled access;
- sanitisation procedures;
- asset reporting;
- battery/fire management;
- auditability.

That pushes a Fliptech branch closer to secure ITAD facility than general recycling shop.

5. Fliptech does reuse and resale, not just recycling

This is important.

Fliptech's own material says Australia's e-waste crisis can be reduced through redistribution.

Its Royal Far West partnership article says:

- a company device no longer needed internally can still enable somebody else;
- old IT equipment can be given a second life;
- devices can be donated into communities rather than simply become waste.

Source:

<https://www.fliptech.com.au/articles/3b6db187-5654-4e59-9515-e3202851afce>

The 2026 Konica Minolta program confirms that eligible Fliptech-handled assets can be:

- refurbished;
- donated;
- placed into official resale channels.

Source:

<https://www.konicaminolta.com.au/promotions/rethink-e-recycling-2026>

A 2024 Fliptech article describes its work as:

- responsible disposal;
- recycling;
- refurbishing IT equipment;
- repurposing devices where possible.

Source:

<https://www.fliptech.com.au/articles/53b6be97-e467-4c86-9dc7-7bc1d9dff119>

Comparison with TechCollect

This makes Fliptech structurally different from standard TechCollect collection.

TechCollect's ordinary recycling stream says collected equipment is not sold second-hand.

Fliptech publicly includes:

reuse / donation / official resale
within its wider ITAD process.

For the Dubbo project, Fliptech is therefore a much closer benchmark than an ordinary recycling cage.

6. Royal Far West creates a real regional-NSW dimension

Fliptech has a documented partnership with Royal Far West, the NSW charity focused on country children.

Fliptech says:

- it processes Royal Far West's used technology;
- much of suitable equipment is donated back into communities;
- the partnership is intended to support education and digital literacy in rural areas;
- the company wants to expand support to communities across Australia.

Source:

<https://www.fliptech.com.au/articles/3b6db187-5654-4e59-9515-e3202851afce>

Royal Far West says it currently supports:

- almost 4,000 country children;
- 361 schools;
- across 387 communities in four states.

Source:

<https://www.royalfarwest.org.au/>

Royal Far West's advocacy record also contains a 2024 NSW pre-budget submission concerning paediatric clinics in Dubbo and Wagga.

Source:

<https://www.royalfarwest.org.au/research-advocacy-childrens-health/>

What this proves

Fliptech already understands:

- rural NSW;
- digital inclusion;
- moving refurbished devices into country communities.

What it does not prove

No evidence was found that:

- Fliptech currently collects e-waste in Dubbo;
- Royal Far West sends Fliptech devices from Dubbo;
- Fliptech has a Dubbo logistics node;
- Royal Far West wants a Dubbo Fliptech branch.

7. NSW Government supplier position

Fliptech appears in the NSW Government buy.nsw supplier directory.

The profile describes it as:

- NSW-based;
- SME;
- registered for faster payments;
- providing electronic-waste recycling and secure data erasure for corporate, residential and social-enterprise contexts.

Source:

<https://buy.nsw.gov.au/supplier/profile/123199>

The listing itself is not proof of a whole-of-government panel appointment or current government contract.

It does show that Fliptech is already visible inside NSW Government procurement infrastructure.

Dubbo implication

A Dubbo presence could potentially target:

- regional government offices;
- health/health-adjacent organisations;
- large regional businesses;
- managed IT clients;
- enterprise refresh projects.

But specific agency procurement rules still apply.

Public schools in particular already have a separate Department of Education e-waste process; they should not be assumed to be freely available Fliptech supply.

See:

NSW-EDUCATION-EWASTE-DUBBO-LAPTOPS.md.

8. Current growth signals

Current public evidence shows a business that is still actively pursuing growth.

Business development hiring

Fliptech advertised a full-time Business Development Manager role in Brookvale in 2026.

The role focuses heavily on:

- outbound prospecting;
- lead generation;
- new business;
- account management;
- growing market presence;
- selling to IT managers, CIOs and system administrators.

Source:

<https://au.linkedin.com/jobs/view/business-development-manager-at-fliptech-australia-4407665970>

Other current sales listings describe:

- cold calling;
- hardware buybacks;
- subsidised data erasure;
- paid-service deals.

Interpretation

The visible growth strategy is currently:

win more enterprise accounts from Brookvale

rather than:

advertise franchise territories or multiple storefront branches.

No public franchise page, dealer program or branch application was found.

9. How large is Fliptech?

There is no current public audited revenue or tonnage figure.

Public scale indicators include:

2025

Awards Australia:

- eight-person team;
- 50+ tonnes processed.

2026

LinkedIn:

- company-size band 11-50 employees.

These sources are not directly comparable:

- the award is a dated narrative profile;
- LinkedIn uses a broad staff-size band.

No current exact staff count, annual tonnage, turnover or profit figure was found.

This matters because a Dubbo full branch cannot be economically modelled accurately without:

- Fliptech annual volume;
- margin per asset;
- collection-cost data;
- downstream cost/rebate;
- enterprise client density.

10. Dubbo is unusually well aligned with Fliptech's industry

This is not simply local enthusiasm.

The NSW Government itself currently markets Dubbo as an e-waste recycling investment opportunity.

Invest Regional NSW says Dubbo:

- is a major regional centre;
- sits at the intersection of road, rail and air infrastructure;
- can aggregate e-waste outputs;
- has industrial land and skilled labour;
- has strong transport links.

Source:

<https://www.investregional.nsw.gov.au/opportunities/dubbo>

The NSW Government e-waste fact sheet specifically describes:

- Dubbo as about five hours north-west of Sydney;
- three major highways;
- Main Western Railway;
- daily air connections;
- a workforce of 30,000+ within an hour;
- substantial industrial-zoned land;
- e-waste recycling as a growth opportunity.

Source:

The PDF screenshot service failed during this research session, so these points were also cross-checked against the current HTML Invest Regional NSW Dubbo opportunity page before relying on them.

11. Dubbo market size / possible customer base

Current public indicators:

Regional service catchment

Dubbo Regional Council says the regional city services a greater catchment of 125,000+ people.

Source:

<https://www.dubbo.nsw.gov.au/Business-Investors/Economic-development/regional-economic-development>

Employment

Council reports around 26,650 jobs in the Dubbo Region.

Large sectors include:

- health care;
- public administration/safety;
- construction;
- education/government/business services across the wider regional economy.

Source:

same Council economic-development page and published economic-profile material.

Business base

Leading Edge Data Centres says Dubbo has 4,500+ businesses.

Source:

https://leadingedgedc.com/dc_location/dubbo/

Existing technology infrastructure

Dubbo has a current Leading Edge Data Centres facility:

- DBO1;
- Tier III design;
- 750 kW total site capacity.

This does not mean the data centre would be a Fliptech client.

It does show that Dubbo is not a low-technology regional market.

12. The distance problem creates a reason for a regional node

Dubbo is around a five-hour drive from Sydney.

Dubbo Regional Council and Invest Regional NSW both describe the city as approximately five hours north-west of Sydney.

Brookvale is on Sydney's Northern Beaches.

Inference

For small individual collections, sending a Brookvale vehicle to Dubbo and back is likely inefficient.

A local regional node could:

- aggregate multiple clients;
- reduce empty/low-volume long-haul trips;
- provide faster regional pickups;
- hold equipment securely until consolidated transport;
- potentially perform local sanitisation/triage if Fliptech approved the facility and processes.

This is business-model inference, not a published Fliptech plan.

13. Current Dubbo competition does not exactly match Fliptech

Dubbo already has some device reuse/refurbishment activity.

Examples found:

Orana Business Solutions

Advertises:

- inspection;
- repair;
- hardware/software upgrades;
- sale of refurbished/pre-loved devices.

Source:

<https://obsolutions.com.au/refurbished-devices>

Tech Savvy Dubbo

Advertises:

- repairs;
- second-hand/refurbished devices;

- 12-month warranty.

Source:

<https://www.techsavvyau.com/>

CBM Computers

A local business directory describes:

- long-running regional IT support;
- rebuilt computers/laptops;
- e-recycling of customer IT products.

Source:

current Dubbo Chamber/Localsearch material.

Important distinction

These demonstrate that:

- there is a local market for refurbished technology;
- local businesses already perform repair/resale/e-recycling.

But the public pages reviewed do not establish that they provide the same enterprise-grade package
Fliptech markets:

- locked collection chain;
- NIST-standard sanitisation;
- serialised asset reporting;
- certificates;
- hardware buyback;
- enterprise fleet decommissioning;
- official resale/donation route;
- sustainability reporting.

That is a possible market gap, but direct competitor calls would be required before calling it an uncontested gap.

14. Existing local disposal options also create competition

Fliptech would not enter an empty market.

Existing disposal routes include:

- Dubbo Regional Council;
- Whylandra;
- Officeworks;
- AMR/former Matthews;
- category-specific product stewardship;

- regional NetWaste routes.

These are attractive to customers who simply want something gone.

Fliptech's competitive advantage would need to be:

data security + accountability + value recovery + reuse reporting

rather than merely:

we take e-waste too.

That is consistent with Fliptech's existing brand.

15. Four possible Fliptech-in-Dubbo models

Model A — Sydney collection route

Fliptech remains entirely Brookvale-based.

A salesperson develops Dubbo/Orana accounts and collections occur:

- when volume reaches a threshold;
- on scheduled regional runs;
- through freight/logistics partners.

Advantages

- almost no local fixed overhead;
- keeps all processing at current secure site;
- easiest to test demand.

Weaknesses

- Sydney-distance collection cost;
- slower response;
- unwiped assets have to travel long distance;
- low-volume clients may be uneconomic.

Evidence

This is consistent with Fliptech having nationwide clients while publicly showing only one main location.

Model B — Dubbo collection / consolidation hub

A small secure regional facility:

- receives approved business assets;
- records serials;
- provides chain-of-custody intake;
- checks battery/safety condition;

- holds assets securely;
- consolidates loads;
- transports batches to Brookvale.

Advantages

- much lower technical overhead than duplicating full processing;
- improves regional collection economics;
- allows same-day local pickups;
- can service a larger Central West/Orana catchment.

Weaknesses

- still transports data-bearing devices before sanitisation unless on-site wipe is added;
- requires planning, insurance, security and battery controls;
- needs enough throughput to justify premises/staff.

Evidence assessment

Plausible. No evidence Fliptech currently offers this model.

Model C — Dubbo authorised operating partner

A local IT/refurb operator works under a formal Fliptech agreement.

Potential local functions:

- sales/business development;
- collection;
- chain of custody;
- asset inventory;
- approved sanitisation;
- testing/grading;
- simple refurbishment;
- regional resale/social deployment;
- bulk shipment of final material into Fliptech's downstream system.

Advantages

- local knowledge and relationships;
- low capital for Fliptech;
- uses an existing regional operator;
- fits Fliptech's national-growth history.

Weaknesses

- major brand/security risk for Fliptech;
- requires strict process control;
- contracts/insurance/liability;
- no public Fliptech partner/franchise model exists today.

Evidence assessment

This is the most interesting Dubbo eWaste ↔ Fliptech concept, but it is entirely unconfirmed.

Model D — full Fliptech Dubbo branch

A genuine second secure facility performing:

- collections;
- erasure;
- certificates;
- testing;
- grading;
- refurbishment;
- resale preparation;
- donation;
- downstream recycling consolidation.

Advantages

- strongest regional service;
- data can be sanitised locally;
- supports fast corporate turnaround;
- potential hub for western NSW;
- aligns with NSW Government's stated e-waste investment opportunity for Dubbo.

Weaknesses

- largest capital/overhead;
- would need volume well beyond a hobby/small pilot;
- duplicate security/process infrastructure;
- staff training;
- planning and environmental/waste classification;
- downstream freight remains necessary for some fractions;
- current public company scale may make a full second facility a meaningful strategic commitment.

Evidence assessment

Possible, but there is not enough public financial/volume evidence to say it would currently be commercially justified.

16. Why a Dubbo partner/hub is stronger than a "shop"

Fliptech's target market appears to be organisations.

Current sales material specifically targets:

- IT managers;

- CIOs;
- system administrators;
- corporate refresh/decommissioning.

Its brand value is:

- security;
- accountability;
- asset reporting;
- circular outcomes.

Therefore the strongest Dubbo concept is not:

Fliptech Dubbo — public e-waste shop

It is:

Fliptech Central West / Orana — secure regional IT asset recovery and decommissioning hub.

Potential service region could include Dubbo and surrounding Central West/Orana clients.

Actual territory, routing and commercial viability would have to be decided by Fliptech.

17. Why Fliptech may be interested

Evidence-based reasons:

1. Historical national ambition — Austin publicly discussed scaling nationally as early as 2020.
2. Nationwide client evidence — later media described nationwide clients.
3. Current business-development hiring — active enterprise growth.
4. Royal Far West partnership — explicit rural/community mission.
5. NSW Government supplier presence — already oriented toward institutional clients.
6. Dubbo is explicitly promoted by NSW Government for e-waste investment.
7. Regional distance from Sydney creates a logistics problem that a hub could solve.
8. 4,500+ businesses / 125,000+ regional catchment create a plausible account base.
9. Health, public administration, education, construction, agri-business and technology infrastructure create regular fleet-refresh potential.
10. Current local disposal is stronger than current visible secure ITAD/reuse reporting, giving Fliptech a differentiated service proposition.

18. Why Fliptech may NOT want a Dubbo branch yet

This side is equally important.

1. No public franchise/branch program exists.
2. Only Brookvale is publicly listed as a Fliptech location.

3. Current growth hiring is centred on Brookvale/Sydney sales, not regional facility management.
4. Fliptech may already serve regional accounts efficiently through logistics without needing real estate.
5. Dubbo's population alone does not establish sufficient enterprise-ITAD volume.
6. High-value corporate refreshes are irregular and lumpy.
7. Government/school assets can be locked into existing procurement contracts.
8. A secure ITAD site costs more than a basic e-waste depot.
9. Battery/fire/storage/planning requirements add overhead.
10. A regional hub could cannibalise little if most jobs are currently consolidated centrally; there may be no economic case until regional account volume grows.

19. What we cannot calculate publicly

A proper branch business case still needs data Fliptech has not published:

- current annual tonnes;
- number of NSW/regional collections;
- number of Central West/Orana customers;
- average devices per job;
- resale percentage;
- average asset recovery value;
- wipe failure rate;
- collection cost/km;
- downstream recycling cost/rebate;
- minimum free-pickup volume;
- gross margin per device;
- Brookvale warehouse capacity;
- regional freight contracts;
- planned geographic expansion.

Without these numbers, a statement such as:

"a Dubbo branch would definitely make money"

would be unsupported.

20. A practical low-risk Dubbo test

Before any branch, Fliptech could run a regional proof-of-demand program.

Stage 1 — account discovery

Target 15–30 organisations across:

- business;

- health;
- professional services;
- manufacturing;
- agriculture;
- utilities/REZ contractors;
- MSP/client fleets.

Ask:

- devices retired per year;
- current disposal method;
- data-security requirements;
- current cost;
- dissatisfaction with current service;
- interest in buyback/reuse reporting.

Stage 2 — scheduled regional collection day

Fliptech:

- books multiple clients;
- uses its secure collection workflow;
- consolidates the route;
- processes assets in Brookvale.

Measure:

- kg/assets per route;
- resale yield;
- erasure workload;
- transport cost;
- customer acquisition cost;
- repeat demand.

Stage 3 — temporary/local secure aggregation

Only if route demand is recurring:

- establish a compliant secure local aggregation point;
- keep processing central initially.

Stage 4 — on-site sanitisation / refurbishment

Only after volume proves it can justify:

- trained staff;
- certified process;
- security;
- equipment;
- premises.

Stage 5 — full branch

Only once it is demonstrably cheaper/better than repeatedly hauling assets to Sydney.

21. Where Dubbo eWaste could fit

There is a possible alternative to competing with Fliptech.

A Dubbo operator could potentially propose becoming:

Fliptech's regional collection, triage and reuse partner
--

rather than building an independent enterprise ITAD stack from scratch.

Possible division:

Local partner

- find regional clients;
- scheduled pickups;
- asset intake;
- serial capture;
- physical triage;
- battery safety;
- local testing/refurbishment where authorised;
- account relationships.

Fliptech

- security standards;
- data-erasure methodology;
- certificates/reporting;
- enterprise brand;
- national resale/buyback channels;
- charity programs;
- downstream recycling relationships.

This would have to be a formal agreement.

There is no evidence such a partner program currently exists.

22. The strongest proposal to make to Fliptech

Do not lead with:

"Will you open a shop in Dubbo?"

A more evidence-based pitch would be:

"Would Fliptech be interested in testing a Central West/Orana regional ITAD collection and reuse pilot based in Dubbo, before considering a permanent regional hub?"

Reasons:

- smaller commitment;
- generates actual market data;
- solves transport aggregation;
- protects Fliptech standards;
- allows Fliptech to test local operator capability;
- can expand into a branch only if volume proves it.

23. Exact questions for Austin / Fliptech

Existing regional activity

1. How many existing clients does Fliptech have in regional NSW?
2. Does Fliptech currently collect from Dubbo, Orange, Bathurst, Mudgee or surrounding areas?
3. How are regional collections currently handled?
4. Does Fliptech use its own vehicles, freight firms or subcontractors outside Sydney?
5. What is the minimum quantity/value for a free regional collection?

Branch strategy

6. Does Fliptech intend to open regional branches?
7. Has Fliptech ever operated a satellite depot?
8. Would Fliptech consider an authorised regional operating partner?
9. Would it consider a joint pilot before committing to premises?
10. Is franchise/licensing explicitly off the table, or simply not developed yet?

Economics

11. What makes a regional collection profitable?
12. Which device categories generate meaningful recovery value?
13. Roughly what percentage of incoming enterprise assets are reused/resold versus materially recycled?
14. Are hardware buybacks calculated per asset or per bulk lot?
15. Can resale value subsidise wiping/collection for high-quality corporate fleets?

Data/security

16. Could a regional partner perform approved data sanitisation?
17. Which software/tools are authorised?
18. What facility/security controls would Fliptech require?
19. How are serialised erasure reports generated?
20. What happens to media that fails sanitisation?

Dubbo

21. Would Dubbo's regional catchment and NSW Government e-waste investment positioning interest Fliptech?
22. Would a Dubbo facility need to process downstream material, or could it be an ITAD/reuse hub only?
23. Could it service the wider Central West/Orana region?
24. Could Royal Far West/community device redistribution form part of a regional pilot?
25. What monthly device/tonnage threshold would be needed before Fliptech would consider a permanent Dubbo site?

24. Possible one-page pilot structure

Working title:

Fliptech Central West / Orana Pilot — Dubbo

Objective

Test whether secure regional ITAD collection in Dubbo can produce enough:

- reusable enterprise assets;
- paid data-erasure work;
- hardware-buyback value;
- recycling volume

to justify a permanent regional presence.

Proposed duration

3-6 collection cycles rather than immediately signing a lease.

Geography

Dubbo as the aggregation point, with outreach across the surrounding Central West/Orana business market subject to Fliptech's chosen territory.

Core KPIs

- organisations onboarded;
- assets collected;
- tonnes collected;
- assets reused/resold;
- assets donated;
- assets recycled;
- recovery value;
- revenue from erasure/paid services;
- logistics cost;
- turnaround;
- repeat clients.

Go/no-go question

Is a permanent local hub cheaper and commercially stronger than servicing the same clients from Brookvale?

26. Final conclusion

There is enough evidence to justify approaching Fliptech about Dubbo.

There is not enough evidence to claim Fliptech should immediately open a full second processing facility.

The most credible proposition is:

Dubbo as a Central West/Orana regional collection + ITAD + reuse pilot, designed to prove the volume before a permanent Fliptech hub.

This aligns with:

- Fliptech's historical national-expansion ambition;
- its current enterprise sales strategy;
- its reuse/data-security positioning;
- its rural Royal Far West partnership;
- NSW Government's explicit promotion of Dubbo as an e-waste investment location;
- the local absence of a clearly advertised enterprise-grade secure ITAD/reuse service matching Fliptech's full offer.

The remaining question is not:

"Could it physically work?"

It is:

"Does the regional asset volume and account value justify Fliptech dedicating people, premises and security infrastructure to Dubbo?"

Only Fliptech's internal commercial data and a Dubbo pilot can answer that.

27. Staffing comparison versus branch-capable Australian ITAD firms

A separate Australian ITAD staffing review corrected one important assumption:

Fliptech does not have a verified exact count of 11 staff. Its current LinkedIn company-size band is 11-50 employees.

The broader comparison was then filtered to companies with actual public evidence of:

- multiple Australian facilities;
- branch/facility expansion;
- strong regional logistics;
- national physical coverage;

- or active ITAD expansion that could make a Dubbo hub plausible.

The retained shortlist is:

- Fliptech Australia — 11-50 LinkedIn band;
- G1 Asset Management — 11-50;
- Renew IT — 51-200 LinkedIn band, with company material also stating 200+ professionals;
- Greenbox Group — 51-200;
- WV Technologies — 51-200, with 61 public LinkedIn profiles visible on a current regional rendering;
- Shred-X — 201-500;
- Iron Mountain / former ACT Logistics — ACT was 51-200 before acquisition; Iron Mountain itself is much larger globally.

The most important comparison is G1.

G1 sits in the same 11-50 LinkedIn size band as Fliptech but currently operates secure processing facilities in:

- Brisbane;
- Sydney;
- Canberra;
- Melbourne;

and explicitly says it services all Australian metro and regional areas.

That means Fliptech's staffing band alone is not evidence that a Dubbo satellite would be too early.

The relevant constraints are more likely:

- regional contract volume;
- transport savings;
- recurring fleet-refresh work;
- asset recovery value;
- facility utilisation;
- security/compliance overhead.
