Source commit: c2103b6090c8

Pack generated: 6 October 2026

Fliptech equivalents and Dubbo branch / regional-hub feasibility

Research date: 2 October 2026 (AEST)

Question: Which Australian businesses are genuinely comparable to Fliptech's reuse-first / secure-ITAD model, and could Fliptech or an equivalent realistically establish a Dubbo presence?

Executive conclusion

Yes, a Dubbo presence is plausible. A full industrial recycling branch is not the most logical first version.

The strongest near-term model is:

Western NSW collection + secure ITAD + reuse/refurbishment satellite
--

with final material recycling sent to an established downstream processor.
--

That is much more plausible than building a shredder/material-processing plant in Dubbo.

The evidence supports three progressively larger models:

1. Regional collection/aggregation partner — lowest cost and lowest risk.
2. Secure ITAD/refurbishment satellite — local serial capture, data sanitisation, testing, grading, repair and resale/donation.
3. Full e-waste processing plant — much higher capital/compliance burden and less obvious need given existing downstream facilities such as Sircel at Parkes and large Sydney processors.

No public evidence was found that Fliptech, Renew IT, G1, WorkVentures, Compnow or the other companies below currently offer a franchise model. A Dubbo branch would therefore require a direct corporate partnership, company-owned expansion, joint venture or contractor/collection arrangement.

1. What Fliptech actually is

Fliptech is much closer to a small modern ITAD company than a conventional scrap yard.

Current corporate footprint

Current evidence:

- legal entity: FLIPTECH AUSTRALIA PTY LTD
- ABN 54 653 401 024
- active since September 2021
- GST registered
- head office/main public location: Brookvale, NSW
- LinkedIn currently describes 11–50 employees
- company LinkedIn says it was founded in 2019
- Buy NSW lists Fliptech as a NSW SME supplier for secure electronic-waste / IT decommissioning services.

Fliptech's public materials focus on:

- business IT decommissioning;
- secure collection;
- e-waste bins;
- sorting;
- secure data erasure;
- refurbishment;
- reuse/resale;
- donation;
- recycling;
- workplace technology refresh/deployment.

Sources:

- ABN Lookup: <https://abr.business.gov.au/ABN/View?id=54653401024>
- Buy NSW: <https://buy.nsw.gov.au/supplier/profile/123199>
- LinkedIn: <https://au.linkedin.com/company/fliptech-australia>
- Fliptech e-waste bins: <https://www.fliptech.com.au/bins>

It started small

A 2025 NSW Young Achiever profile says founder Austin Turpin started Fliptech as a teenager. Contemporary reporting described the business as having grown from a garage operation into an eight-person company with nationwide clients.

That origin is very relevant to Dubbo eWaste:

Fliptech itself did not begin as a national industrial e-waste processing plant.

It grew from an asset-handling / reuse / recycling service.

Source:

- Awards Australia: <https://awardsaustralia.com/young-achiever-awards/nsw/previous-winners/>
- Daily Telegraph summary indexed in search: "Teen entrepreneur computes his way to become e-waste boss"

Current service sophistication is much higher than simple recycling

A current Konica Minolta e-recycling program identifies Fliptech as the provider for:

- NIST 800-88-labelled data erasure
- erasure certificates
- asset reports
- refurbishment/reuse
- donation
- official resale channels.

This is strong evidence that Fliptech now performs an ITAD/value-recovery function rather than only moving equipment to a recycler. It is not, by itself, an independent audit of the exact sanitisation procedure or proof of NIST SP 800-88 Rev. 2 compliance for every device.

Source:

- <https://www.konicaminolta.com.au/promotions/rethink-e-recycling-2026>

Fliptech explicitly believes e-waste should be redistributed where possible

Its Royal Far West partnership says much of the used technology can be donated back into communities and explicitly frames corporate IT as equipment that may still enable somebody else rather than becoming waste.

Source:

- <https://www.fliptech.com.au/articles/3b6db187-5654-4e59-9515-e3202851afce>

Geographic expansion has already happened

The public corporate profile still lists Brookvale as Fliptech's primary location, but employee/social material records:

"We're operating in Melbourne now too!"

This is evidence that Fliptech has already expanded service operations beyond Sydney.

Important limit: no public source found in this research provides a current street address for a dedicated Fliptech Melbourne processing branch. Therefore "operating in Melbourne" should not automatically be interpreted as proof of a full second processing warehouse.

Source:

- <https://au.linkedin.com/in/samuel-wellings-0b3bb7245>

Current growth signals

Fliptech has recently:

- recruited business-development staff;
- expanded its message from disposal into full workplace decommissioning and installation;
- participated in corporate and government-facing e-waste events;
- continued positioning itself around data-bearing hardware, security and transparent downstream handling.

This matters because a Western NSW satellite could potentially be justified as both:

- IT deployment/decommissioning support
- and retired-asset collection/value recovery

rather than surviving on household e-waste alone.

2. Could Fliptech itself open in Dubbo?

Structurally: yes

There is no obvious structural reason Fliptech could not establish a Dubbo satellite.

Reasons Dubbo is credible:

- Dubbo Regional Council describes the city as servicing a catchment over 125,000.
- Official/local-government data records around 5,593 active businesses in the LGA.
- Dubbo is a major regional service centre at the intersection of three highways.
- Major employment sectors include health, education, government and other organisations that operate substantial IT fleets.
- The Central West/Orana region includes Dubbo, Narromine, Wellington and many surrounding towns with existing e-waste streams.
- Fliptech is already NSW-based.
- Fliptech is already a Buy NSW supplier.
- Its Royal Far West partnership is explicitly aimed at rural/regional digital inclusion.
- Fliptech has already shown geographic expansion outside Sydney.

Sources:

- Dubbo Regional Council: <https://www.dubbo.nsw.gov.au/Business-Investors/Economic-development/regional-economic-development>
- NSW Your Council: <https://www.yourcouncil.nsw.gov.au/council-data/dubbo-regional-1787123466/>
- RDA Orana: <https://www.rdaorana.org.au/orana-region/dubbo-region>

But the word "branch" matters

A full warehouse/processing branch and a regional ITAD satellite are economically different things.

Model A — Western NSW collection partner / depot

A secure local point could:

- receive approved business equipment;
- record client / chain of custody;
- serialise assets;
- place data-bearing equipment into secure storage;
- consolidate loads;

- dispatch to Fliptech's main processing facility;
- coordinate local business pickups;
- run collection bins/cages.

This requires much less capital than establishing a fully certified data-erasure/refurbishment warehouse.

Model B — Dubbo ITAD/refurbishment satellite

A more useful local branch could perform:

- secure custody;
- asset manifests / serial capture;
- data sanitisation;
- hardware tests;
- grading;
- RAM/SSD/battery/charger work;
- refurbishment;
- resale preparation;
- donation preparation;
- component recovery;
- pallet consolidation of true end-of-life equipment.

This is the model most closely aligned with the current Dubbo eWaste concept.

Model C — full recycling/processing facility

This would add:

- industrial dismantling;
- bulk material separation;
- shredding;
- hazardous streams;
- possibly battery processing.

There is currently much less evidence that Dubbo needs this.

Parkes already hosts specialist e-waste processing through Sircel, while major NSW processors operate closer to Sydney.

The business case for Dubbo is stronger at the high-value beginning of the lifecycle than at the industrial shredding end.

3. Why a Dubbo satellite may make more sense than sending everything to Sydney

A regional satellite could solve problems created by distance:

- small Western NSW collections may be uneconomic as individual Sydney pickups;
- businesses may leave retired IT in storerooms because collection is inconvenient;
- devices lose resale value while sitting unused;
- lithium-bearing equipment can become a storage hazard;
- chain-of-custody is easier to explain when a regional specialist can collect directly;
- local testing lets valuable devices be identified before unnecessary freight;
- low-value material can be consolidated into economical downstream loads.

The ideal purpose of a Dubbo site would therefore not be:

"store lots of e-waste"

It would be:

reduce the amount that needs to be freighted as waste, while consolidating the material that truly does require downstream recycling.

4. The main risk to a Fliptech Dubbo branch

The biggest commercial question is not whether Dubbo generates e-waste.

It clearly does.

The question is:

Is there enough recurring, high-quality business IT refresh volume to support permanent staff and premises?

Public data establishes the size of the regional economy but does not disclose:

- annual retired laptop count;
- corporate refresh volumes;
- current ITAD contract spend;
- how many devices are already captured by incumbent national providers;
- how much residual value those devices contain.

That needs real sales discovery.

A branch should ideally be anchored by recurring sources such as:

- large employers;
- health and aged-care providers;
- schools/education;
- councils/government;
- banks/professional offices;
- MSPs;
- retail chains;

- mining/agriculture/renewable-energy businesses;
- organisations with many regional sites.

Without anchor supply, a national ITAD company can usually service Dubbo more cheaply through scheduled logistics than a permanent branch.

5. Comparable Australian companies

The companies below are genuine Fliptech equivalents or close adjacent models.

They have been selected because they combine several of:

- IT asset disposition;
- secure data erasure;
- chain of custody;
- reuse/refurbishment;
- asset buyback/resale;
- donation/social reuse;
- e-waste recycling;
- national/regional logistics.

6. Renew IT

Model

Renew IT is one of the closest mature comparisons to Fliptech.

It offers:

- ITAD;
- buyback;
- NIST-compliant data destruction;
- refurbishment/value recovery;
- downstream e-waste processing;
- enterprise asset services.

Buy NSW describes Renew IT as a leading Australian ITAD company that buys servers, networking gear, laptops and phones, performs secure data destruction and uses a downstream e-waste program linked with the UNSW e-microfactory.

Source:

- <https://buy.nsw.gov.au/supplier/profile/1199>

Physical expansion pattern

Renew IT currently publishes Australian facilities in:

- Lane Cove West, NSW
- Dandenong South, VIC
- Canning Vale, WA

and says it has asset drop-off points in major capital cities.

It also has overseas operations.

Sources:

- <https://renew-it.com/contact-us/>
- <https://renew-it.com/international/>

What this says about Dubbo

Renew IT demonstrates that a mature ITAD company does add physical depots as volume/geography justify them.

However, its Australian permanent facilities remain large-market locations.

Most plausible Dubbo form

Drop-off / aggregation depot or scheduled regional collection node before full processing branch.

Branch feasibility

Medium.

The precedent exists, but Dubbo would likely need anchor corporate/government volume to justify a permanent processing facility.

7. G1 Asset Management

Model

G1 is a dedicated ITAD operator rather than a general MSP.

It advertises:

- secure collections;
- asset disposition;
- Blancco erasure;
- physical destruction;
- e-waste recycling;
- government/enterprise reporting;
- donation through Tech To Country.

It holds/advertises:

- ISO 27001
- ISO 9001
- ISO 14001
- ISO 45001
- AS/NZS 5377
- NAID AAA
- R2v3 at Brisbane and Sydney.

Sources:

- <https://g1.com.au/>
- <https://g1.com.au/about/accreditations/>

Physical network

G1 publishes processing facilities in:

- Sydney / Wetherill Park
- Canberra
- Melbourne
- Brisbane/Yatala

and explicitly says it services all Australian metro and regional areas.

Source:

- <https://g1.com.au/contact/>

The especially relevant partner model

G1 has a specific offer for IT service providers:

- white-labelled decommissioning;
- secure data erasure;
- recycling;
- client reporting.

That means a local IT/MSP or regional operator can potentially remain customer-facing while G1 supplies the certified back end.

Source:

- <https://g1.com.au/solutions/it-service-providers/>

Most plausible Dubbo form

Local/white-label collection and ITAD partner, not immediately a G1-owned processing facility.

Branch feasibility

Medium for a partner/satellite; lower for a full processing branch.

G1 already claims national regional coverage, so it can serve Dubbo without opening a building. A local partner becomes attractive if it materially reduces collection cost or creates new Western NSW client volume.

8. WorkVentures / CircularIT

Model

WorkVentures is a social-enterprise version of secure ITAD.

Its model combines:

- secure asset collection;
- data sanitisation;
- refurbishment;
- donation;
- National Device Bank distribution;
- resale/value recovery where applicable;
- digital inclusion;
- jobs/training.

Buy NSW describes its circular IT model as collecting, data-wiping, refurbishing and redistributing technology.

Sources:

- <https://buy.nsw.gov.au/supplier/profile/91270>
- <https://workventures.com.au/circularit/>

Coverage

WorkVentures says it operates across Australia with logistics partners covering major cities and regional centres.

It separately provides technical/refurbishment workshops and long-running component-level repair capability.

Sources:

- <https://workventures.com.au/circularit/>
- <https://workventures.com.au/tech-solutions/>

Direct NSW relevance

WorkVentures delivers the current NSW Device Bank program and already services all NSW regions through its broader activities.

Dubbo also has existing Good Things Australia community-network connections documented elsewhere in this repo.

Most plausible Dubbo form

Not a conventional commercial "branch".

More plausible:

- regional device collection partner;
- Device Bank distribution/support hub;
- social-enterprise refurbishment workshop;
- youth training / repair partnership.

Branch feasibility

High partnership fit; low-to-medium likelihood of a conventional company-owned branch.

For Dubbo, WorkVentures may be more valuable as a program partner than a landlord opening another warehouse.

9. Compnow / SustainIT

Model

Compnow's SustainIT operation is a highly relevant reuse-first lifecycle model.

SustainIT says more than 98% of received equipment is refurbished/repurposed rather than material-recycled.

It offers:

- asset collection;
- audit;
- data erasure;
- assessment;
- buyback;
- refurbishment;
- remarketing;
- donation/reuse.

Source:

- <https://www.sustainit.com.au/>

Physical branch network

Compnow already has full Australian offices in:

- Melbourne
- Sydney
- Brisbane
- Adelaide
- Perth.

Source:

- <https://www.compnow.com.au/contact/>

Its Good360 partnership also demonstrates nationwide corporate fleet pickup.

What this means for Dubbo

Compnow clearly knows how to open physical branches.

But it also already has the logistics capability to collect from regional Australia without adding one.

Most plausible Dubbo form

Regional pickup/field-services route, possibly with local technician/partner support.

Branch feasibility

Low-to-medium in the short term.

A permanent Dubbo branch would probably need demand for Compnow's broader IT procurement/deployment/managed-device services, not only e-waste.

10. 9R Cycle IT

Model

9R is one of the closest current NSW startup-scale equivalents to Fliptech.

Its programs include:

- free e-cycle;
- donation;
- buyback/value recovery;
- remarketing;
- data-centre decommissioning;
- redeployment;
- refurbishment;
- auction sales.

Buy NSW confirms it is a current NSW SME ITAD supplier.

Sources:

- <https://buy.nsw.gov.au/supplier/profile/12450618>
- <https://www.9rcycleit.com.au/>

Current footprint

Head office:

Yennora NSW 2161

It says:

- NSW-wide collection;
- regional NSW collection through third-party logistics;
- national service;
- assets are sorted into reuse/resell/recycle/donate pathways at its warehouse.

Sources:

- <https://www.9rcycleit.com.au/services>
- <https://9rcycleit.com.au/news/it-asset-remarketing-turn-retired-it-equipment-into-revenue-not-landfill-1>

Why it is interesting for Dubbo

9R is newer than many national ITAD companies and already explicitly uses third-party logistics for regional NSW.

That makes the gap obvious:

a trusted Western NSW local operator could potentially replace some long-distance third-party collection/handling with a local secure intake and triage point.

No evidence was found that 9R is currently seeking such partners.

Most plausible Dubbo form

Collection/aggregation/triage partnership.

Branch feasibility

Medium-high as a partnership concept; medium/low as a fully owned processing branch until volumes are demonstrated.

11. The Reconnect Project

Model

The Reconnect Project is not an enterprise ITAD clone of Fliptech, but it is highly relevant to the repair + social reuse side.

It accepts:

- phones/tablets of any age/condition;
- laptops below its published age threshold;
- corporate/bulk donations.

Its process includes:

- triage;
- repair;
- Blancco erasure;
- parts harvesting;
- redistribution to support agencies;
- Australian reprocessors for true failures.

Sources:

- <https://thereconnectproject.com.au/>
- <https://thereconnectproject.com.au/donate/>

Current footprint

Primary repair workshop:

Penshurst, NSW

It also operates authorised donation stations, accepts mail-in devices and runs corporate/bulk programs.

Source:

- <https://thereconnectproject.com.au/contact/>

Why Dubbo is interesting

Reconnect's model specifically links:

- device repair;
- digital inclusion;
- paid employment/training for young people.

That could fit a regional social-enterprise workshop well.

Its published long-term aim includes helping people develop employment and eventually microbusiness repair skills.

Most plausible Dubbo form

Affiliate/social repair workshop or donation station, not industrial recycling branch.

Branch feasibility

Conceptually high, operationally dependent on funding, staff/training and a local social-service partner.

No public franchise/branch program was found.

12. ITC Asset Management

Model

ITC is a Sydney-based commercial ITAD operator offering:

- secure collection;
- serial logging;
- NIST 800-88 sanitisation;
- buyback/value recovery;
- reuse/refurbishment;
- e-waste processing;
- certificates of data destruction and recycling.

Source:

- <https://www.itcassetmanagement.com.au/services/it-asset-disposal-sydney/>

Current regional model

ITC operates from North Rocks and says Greater NSW is serviced on scheduled routes.

It also says it services interstate work from the central facility.

This is very informative for Dubbo branch economics:

a specialist ITAD company can cover regional NSW using route density before opening a permanent facility.

Most plausible Dubbo form

Scheduled Western NSW route first.

A local depot would become logical only if Dubbo/Orana volume makes repeated long-distance transport inefficient.

Branch feasibility

Low-to-medium immediately; higher after proven recurring volume.

13. LinkBytes

Model

LinkBytes combines:

- ITAD;
- asset auditing;
- buyback;
- secure data destruction;
- refurbishment;
- resale/wholesale.

It says it has refurbished more than 50,000 devices and supports jobs from 10 to 10,000 assets.

Source:

- <https://www.linkbytes.com.au/>

Current footprint

Its public base is Liverpool/Sydney.

No regional branch network was found.

Most plausible Dubbo form

Regional feeder/buyback collection relationship.

Branch feasibility

Low-to-medium.

The company can already execute national projects while processing centrally; a Dubbo location would need to improve fleet sourcing materially.

14. 2NDS IT

Model

2NDS IT provides:

- redeployment/reuse/recycling;
- audits and tracking;
- data destruction;
- corporate IT buybacks;
- warehouse/logistics support.

It advertises a national network of service technicians.

Source:

- <https://2ndsit.com.au/>

Current physical footprint

Published major facilities include:

- Sydney / Kings Park
- Melbourne / Somerton.

Most plausible Dubbo form

Because it already uses a technician network, a regional technician / collection partner is more plausible than a standalone e-waste branch.

Branch feasibility

Medium for local representation; lower for full facility.

15. E-Waste NSW

Model

E-Waste NSW markets:

- asset removal/logistics;
- data destruction;
- asset tracking;
- refurbishment/resale;
- client redeployment;
- parts recovery;
- recycling.

Source:

- <https://www.ewastensw.com.au/service/assets-management/>

Current footprint

Public contact address:

Chullora/Greenacre NSW

Source:

- <https://www.ewastensw.com.au/contact-us/>

Caution

Compared with firms such as G1, Renew IT and WorkVentures, its public documentation is less useful for verifying:

- exact certification scope;
- national network;
- regional service model;
- branch history.

Therefore it is a relevant market participant but a weaker evidence base for predicting Dubbo expansion.

16. Sircel is a downstream neighbour, not a direct Fliptech equivalent

Sircel has both ITAD/reuse and industrial e-waste processing capabilities, but its Parkes facility changes the Dubbo branch question.

A Dubbo reuse/ITAD satellite does not need to duplicate industrial processing if a suitable regional downstream facility already exists comparatively nearby.

Sircel publicly describes:

- collection;
- ITAD/data sanitisation;
- reuse;
- mechanical processing;
- commodity recovery.

Source:

- <https://sircel.com/services/>
- <https://sircel.com/contact-us/>

Current corporate/receivership status remains a due-diligence issue documented elsewhere in this repo.

Strategic implication

The regional system potentially needs:

Dubbo = high-value front end

→ Parkes / Sydney = certified industrial back end

rather than two industrial processing plants competing at small regional scale.

17. Comparison table

Company	Current physical pattern	Reuse/resale	Secure data	Regional service	Public franchise?	Most plausible Dubbo model
Fliptech	Brookvale primary; evidence of Melbourne operations	Yes	Yes	Nationwide clients	/	

growing footprint | None found | Western NSW ITAD/refurb satellite

Renew IT | NSW, VIC, WA facilities + major-city drop points | Yes | Yes | National/international | None found | depot / drop-off / collection hub

G1 Asset Management | NSW, ACT, VIC, QLD processing facilities | Yes | Yes | Explicit all-metro/regional AU | None found | white-label local ITAD partner

WorkVentures | Sydney/Melbourne technical capability + national logistics | Yes/social | Yes | Explicit regional-centre coverage | None found | social reuse + Device Bank partner

Compnow/SustainIT | 5 capital-city branches | Yes | Yes | National fleet collection | None found | field collection / technician route

9R Cycle IT | Yennora warehouse | Yes | Yes | NSW + regional 3PL | None found | regional collection/triage partner

Reconnect Project | Penshurst workshop + donation stations/mail | Yes/social | Yes | Australia-wide donation/distribution | None found | repair/social-enterprise satellite

ITC Asset Management | North Rocks processing facility | Yes | Yes | scheduled Greater NSW routes | None found | Western NSW scheduled route/depot

LinkBytes | Liverpool/Sydney | Yes | Yes | national project capability | None found | fleet feeder/buyback relationship

2NDS IT | Sydney + Melbourne + technician network | Yes | Yes | national technician network | None found | local service/collection technician

18. Which companies are most interesting for an actual Dubbo partnership?

This is an analytical prioritisation based on the evidence above.

Tier 1 — strongest to approach about a local/satellite model

Fliptech

Why:

- NSW-based;
- similar entrepreneurial scale/origin;
- reuse-first;
- corporate security/data focus;
- regional charity alignment;
- evidence of geographic expansion;
- likely to understand the value of being early in an underserved market.

Best question:

Would Fliptech consider a Western NSW collection/ITAD satellite in Dubbo if a local operator proved recurring business fleet volume?

G1 Asset Management

Why:

- explicitly supports white-label IT provider relationships;
- strong security/certification stack;
- national/regional service;
- a local Dubbo operator could become front-line collection/technical capacity without pretending to hold G1's certifications.

Best question:

Could a Dubbo IT/refurb operator act as a secure local collection/triage subcontractor while G1 remains the certified ITAD back end?

9R Cycle IT

Why:

- NSW-wide;
- currently uses 3PL for regional NSW;
- offers reuse, resale, donation and refurbishment;
- relatively new/growing company;
- a local regional node could solve a real logistics weakness.

Best question:

Would 9R replace third-party regional logistics with an approved Western NSW intake/triage partner if enough recurring business volume can be demonstrated?

WorkVentures

Why:

- strongest social impact fit;
- already national/regional;
- NSW Device Bank;
- existing Dubbo Good Things ecosystem;
- can connect device supply to digital inclusion.

Best question:

Could Dubbo have a local CircularIT / Device Bank collection and refurbishment partner rather than sending every device to Sydney?

19. Tier 2 — important but probably service Dubbo remotely before opening a branch

- Renew IT
- Compnow/SustainIT
- ITC Asset Management
- LinkBytes
- 2NDS IT

These businesses already have:

- capital-city processing;
- logistics networks;

- resale channels;
- remote/regional collection capability.

For them, the commercial question would be:

Does a local Dubbo node reduce freight/custody cost enough, or win enough new customers, to justify fixed regional overhead?

They may prefer a contractor, scheduled route or drop-off partner first.

20. The branch model Dubbo should pitch

Do not start by asking a company:

"Will you open a recycling plant in Dubbo?"

A much more commercially credible pitch is:

"Would you trial a Western NSW secure ITAD satellite in Dubbo?"

Proposed function

The satellite would:

1. source local organisations;
2. collect/receive only approved IT assets;
3. record transfer authority;
4. serialise/photograph;
5. secure unwiped equipment;
6. perform approved data sanitisation if authorised/trained;
7. test and grade devices;
8. refurbish straightforward equipment;
9. route high-value assets into the company's resale/broker system;
10. prepare social-use assets for approved partner pathways;
11. consolidate genuine e-waste;
12. send remainder to the parent company's nominated certified recycler;
13. provide outcome reports.

Parent company supplies

Ideally:

- SOPs;
- client contract wording;
- chain-of-custody forms;
- erasure software/licences;

- certificate system;
- asset management portal;
- grading rules;
- approved reseller/broker channels;
- downstream recycler contract;
- insurance/compliance requirements;
- national-client referrals.

Dubbo operator supplies

- local presence;
- business development;
- pickups;
- secure storage;
- bench diagnostics;
- refurbishment labour;
- regional relationships;
- local social partners;
- Western NSW route consolidation.

This is much closer to the economics of a regional ITAD franchise/satellite, even though none of the companies currently publishes a franchise program.

21. Could Dubbo eWaste become the local operator?

Potentially, but this should be approached carefully.

The current Dubbo eWaste project is still resolving:

- residential planning;
- premises suitability;
- Fair Trading / second-hand dealer position;
- insurance;
- downstream agreements.

A national ITAD company would likely require a much higher standard than the initial shed pilot for customer data-bearing assets.

Likely requirements would include:

- proper commercial/security premises;
- alarm/CCTV/access control;
- locked cages;
- chain-of-custody procedures;
- cyber/privacy controls;

- background checks;
- suitable insurance;
- WHS;
- data-erasure competency;
- auditable asset system;
- approved transport;
- lithium safety;
- customer contractual liability.

Therefore:

The home-shed pilot can prove local supply and technical economics. It should not be represented as automatically ready to become a certified national ITAD branch.

The data collected by the pilot could, however, become the evidence used to win such a partnership.

22. What would prove a Dubbo branch is viable?

Before asking anyone to sign a lease, gather actual evidence for:

Supply

- number of local organisations interested;
- asset volumes;
- refresh cadence;
- equipment age/spec;
- proportion with residual value;
- current disposal method.

Route economics

- current cost of Sydney pickup;
- minimum volume for free/nil-cost collection;
- pallet/cage freight cost;
- how often regional collections are needed;
- value lost when assets sit for months.

Client demand

Do clients want:

- certificates?
- serial reports?
- buyback?
- donation?

- secure destruction?
- onsite wiping?
- ESG reporting?

Processing economics

- reuse rate;
- resale value;
- repair cost;
- labour;
- turnaround;
- parts recovery;
- true downstream cost.

Anchor clients

The strongest evidence would be letters/emails of interest or recurring trial collections from multiple organisations rather than a population statistic.

23. Suggested low-risk rollout

Stage 1 — prove demand without a branch

Build a Western NSW prospect list and secure:

- 3-5 pilot business collections;
- actual asset manifests;
- real device counts;
- real value recovery;
- real downstream cost.

Stage 2 — partner trial

Approach Fliptech / G1 / 9R / WorkVentures with:

- the manifest data;
- photos;
- annualised supply estimate;
- client sectors;
- measured local collection cost;
- proposed secure process.

Ask for a 90-day or 6-month regional partner trial.

Stage 3 — secure micro-depot

Only after corporate/premises/legal approval:

- small industrial unit;
- secure cage;
- bench;
- serial intake;
- data sanitisation;
- testing/refurb;
- no industrial shredding.

Stage 4 — formal Western NSW satellite

Only after recurring contracts justify:

- dedicated employee(s);
- branded vehicle;
- parent-company systems;
- regular Western NSW route;
- permanent inventory/refurb area.

24. Specific pitch to Fliptech

A direct approach could say:

Fliptech already serves organisations nationally and has expanded beyond Sydney. Dubbo services a catchment of more than 125,000 and is the commercial hub for Western NSW, but there is no obvious local business publicly offering Fliptech-style secure ITAD + reuse + data-erasure reporting. I am researching and piloting a reuse-first Dubbo operation. Would Fliptech be open to discussing a Western NSW collection/ITAD satellite or approved regional partner model if I can demonstrate recurring commercial fleet volume? I am not proposing to duplicate industrial recycling — the value would be local collection, chain of custody, triage, secure data handling, refurbishment and regional business development, with end-of-life material routed through your approved downstream chain.

Questions:

1. Do you currently service Dubbo/Western NSW?
2. How?
3. What minimum collection volume makes the route viable?
4. Is Melbourne company-owned, partner-operated or logistics-only?
5. Have you used regional subcontractors?
6. Would you consider an approved regional collection partner?
7. Could that partner perform serial capture only, or also Blancco/NIST erase?
8. What security/premises standards would apply?
9. Could devices be refurbished locally under Fliptech SOPs?

10. Who owns resale inventory?
11. How is resale value shared?
12. Could local donated devices remain in Western NSW?
13. Would Royal Far West or another charity pathway support regional distribution?
14. Who carries warranty/ACL responsibility for resold assets?
15. What downstream recycler would a Dubbo branch use?
16. Would a branch need the same ISO/certification scope as Brookvale?
17. What monthly device volume would justify a permanent Dubbo location?
18. Could we trial the model before committing to premises?

25. Specific pitch to G1

Because G1 explicitly markets white-label ITAD to IT providers, its partnership conversation can be even more direct:

Could a Dubbo-based IT/refurbishment operation act as your Western NSW local collection and first-pass asset-handling partner under a controlled SOP, while G1 provides the certified data/recycling back end and national reporting?

Ask:

- which activities can a subcontractor perform?
- is chain of custody preserved if a regional partner touches the assets?
- can local sanitisation be done using G1-managed Blancco?
- can reusable equipment be refurbished locally?
- does G1 share residual-value revenue?
- does it already have Western NSW technicians/contractors?
- what premises/security/insurance standard is required?
- what volume would justify a permanent regional node?

26. Specific pitch to WorkVentures

WorkVentures is a different opportunity:

Could Dubbo host a local CircularIT collection/refurbishment and Device Bank support node, using existing Good Things/community partners for final distribution?

Possible value:

- collect good local business devices;
- reduce freight of obvious scrap;
- prepare deployment-ready laptops;
- support NSW Device Bank recipients;
- train/employ local young people;

- connect with Dubbo Support Center / digital-literacy programs.

This would need formal WorkVentures agreement and should not be represented as available today.

27. Biggest unresolved questions

1. Does Fliptech actually service Dubbo today?

No public service map or regional minimum volume was found.

2. What is Fliptech's Melbourne operating structure?

Public evidence says it operates there, but no verified public branch address/process model was found.

3. Does Fliptech use subcontractors/partners for regional collection?

No public evidence found.

4. Would any ITAD company allow local wiping/refurbishment?

Chain-of-custody and certification may require central processing.

5. What is the actual Western NSW corporate fleet volume?

This is the key branch-economics unknown and requires direct market discovery.

6. Would large organisations already be locked into national ITAD contracts?

Likely in some cases, but not quantified.

7. What site/certification/security standard would a parent company require?

Must be obtained from each company.

8. Who bears resale warranty/ACL risk?

Critical if local assets are sold under parent-company branding.

9. Can social-use devices remain in the Dubbo region?

Strong social case, but requires partner rules and demand.

10. Which regional downstream recycler would be contractually approved?

Parkes/Sircel is geographically attractive, but each ITAD company may have its own certified downstream chain.

28. Overall finding for Dubbo eWaste

The Australian market already proves that the proposed Dubbo model is real.

There are many companies making a business from:

collect → secure → wipe → test → value → refurbish → resell/donate → recycle failures

What is unusual is not the model.

What is unusual is that Western NSW appears to have no obvious publicly visible local specialist doing the whole Fliptech-style ITAD/value-recovery chain from Dubbo.

That creates two possible paths:

Independent path

Build Dubbo eWaste into the local version of that model.

Partner path

Prove local supply, then become the Western NSW satellite/collection/refurbishment partner of an existing ITAD company.

The second path could provide:

- better credentials;
- national accounts;
- erasure software;
- reporting systems;
- resale channels;
- downstream contracts;

while retaining a local Dubbo operation.

The most commercially sensible first ask is not "open a Dubbo branch".

It is:

"Would you trial a Western NSW secure ITAD partner/satellite in Dubbo if we can prove the volume?"
