Good360, Compnow, National Device Bank, WorkVentures & Good Things Australia — deep dive and Dubbo connections

Research date: 2 October 2026 (AEST)

This document traces the Australian reuse ecosystem around Good360 Australia, Compnow/SustainIT, the National Device Bank, WorkVentures and Good Things Australia, then maps the strongest specific connections to Dubbo and regional NSW.

The most important finding is that there are several related but not identical device-reuse pathways. They should not be collapsed into one chain.

Executive findings

1. Good360 and Sircel are genuinely connected

Good360's 2024 Annual Report names Sircel among organisations contributing to its digital-access work. The same report names Compnow separately.

This proves Sircel has been a product donor into the Good360 digital-inclusion ecosystem.

It does not prove:

- all Sircel reuse devices went to Good360;
- that Sircel devices specifically went through Compnow;
- how many devices Sircel donated;
- that Sircel is currently a formal National Device Bank donor.

Those links need to remain separate unless a partner confirms them.

2. Compnow is a very detailed working example of how Good360 gets corporate laptops ready for second life

Good360 and Compnow published a 2024 case study showing an unusually detailed refurbishment chain:

corporate fleet -> Compnow pickup -> certified wipe -> condition assessment -> hardware test -> repair/battery swap/parts matching -> OS reinstall -> source missing charger -> individual box/label -> Good360 -> disadvantaged school/student

Compnow became Good360's official Education Partner in 2022.

3. The National Device Bank is a newer, broader system

The National Device Bank (NDB) was officially launched on 7 August 2025 by:

- WorkVentures
- Good360 Australia
- Good Things Australia

Its model is:

corporate/government donor -> secure refurbishment -> free community distribution -> connectivity/digital skills/support

WorkVentures is the technical/ITAD/refurbishment anchor; Good360 brings distribution/logistics and charity reach; Good Things brings community digital-literacy capability.

4. NSW now has a separate government-device pilot

The NSW Device Bank is a distinct 12-month state pilot announced in May 2026.

It uses surplus NSW Government laptops and is delivered by:

- NSW Telco Authority;
- WorkVentures;
- Good Things Australia.

The first publicly identified rollout was at The Place Charlestown in September 2026: 30 refurbished laptops, 12 months of data, digital-skills training and IT support.

The NSW program says it will expand through registered charities/community organisations across NSW.

5. Dubbo already has strong Good Things infrastructure

Two especially important local connections were found:

- Dubbo Support Center is a Good Things Australia partner, was selected for Digital Sisters, received multiple Good Things/Be Connected grants, and is now an ACNC-registered charity.
- Digital Nebula – Dubbo received Good Things/Be Connected digital-skills and Get Online Week funding.

This matters because the NSW Device Bank's published eligibility says registered NSW charities/NFPs on the ACNC register can request devices or apply as digital-literacy providers.

Dubbo Support Center appears to meet that published organisation-level requirement. No public evidence was found that it has already applied or been selected.

6. No publicly announced Dubbo Device Bank rollout was found

As of 2 October 2026, this research found:

- no named National Device Bank deployment in Dubbo;

- no named NSW Device Bank deployment in Dubbo;
- no public Compnow device-refurbishment project specifically in Dubbo;
- no public evidence that Good360's digital-device program has already distributed laptops in Dubbo.

That is not evidence that nothing has happened privately. It means there is no public proof yet.

1. How the organisations fit together

The ecosystem is better understood as two overlapping pipelines

Pipeline A — Good360 Digital Divide / Laptop Launchpad

Corporate or government donor

↓

Good360 donation program

↓

trusted refurbishment partner such as Compnow

↓

secure wipe / test / repair / preparation

↓

Good360

↓

registered charity or disadvantaged school

↓

person who needs the device

This pathway predates the National Device Bank and remains active.

Pipeline B — National Device Bank

Corporate or government donor

↓

National Device Bank

↓

WorkVentures

- secure logistics
- asset tracking
- Blancco/data sanitisation
- testing/grading
- repair/refurbishment
- configuration

↓

Good360 / Good Things / WorkVentures networks

↓

trusted community organisation

↓

recipient + device + skills/support/connectivity

Pipeline C — NSW Device Bank

NSW Government surplus laptop

↓

NSW Telco Authority program

↓

WorkVentures

- secure collection
- wipe
- refurbish
- quality test

↓

Good Things Australia

- trusted local community partner
- digital-skills layer

↓

eligible NSW resident

↓

laptop + internet/data + skills + support

The NSW Device Bank is therefore especially relevant to Dubbo because it is explicitly statewide and prioritises people facing digital exclusion including regional and remote residents.

2. Good360 Australia in detail

What Good360 actually does

Good360 is primarily the matching/distribution layer, not the industrial ITAD/refurbishment specialist.

Its Digital Divide program says it:

1. reclaims used laptops, mobiles and tablets from organisations;
2. sends them through trusted refurbishment partners;
3. securely wipes/tests/prepares them;
4. recycles devices that fail;
5. rehomes successful devices through its charity/school network.

Its current donor page targets:

- laptops;
- mobile phones;
- iPads/tablets;
- generally 3-5 years old;
- laptops less than 5 years old and in good working condition.

Good360 says recipient devices are supplied free.

Program economics

Good360's current donor information says it asks participating donors to contribute toward program costs:

- \$100 per device for device processing/distribution;
- \$150 per device for device + 12 months of data.

Good360 says the recipient pays nothing.

This is useful for Dubbo E-Waste because it shows that a charitable reuse pathway still has real costs:

- data sanitisation;
- labour;
- testing;
- repairs;
- cleaning;
- logistics;
- matching;
- connectivity;
- support.

A "free laptop" to the end user is not a zero-cost system.

3. The Sircel -> Good360 connection

Good360's 2024 Annual Report lists Sircel among the organisations supporting its digital-access work.

The same digital-divide section also lists:

- Compnow;
- Google;
- HP;
- Optus;
- Schneider Electric;
- SA Power Networks;
- and other technology/product contributors.

Good360 reported that in 2024 it connected more than 1,200 devices to communities nationally, worth more than \$1 million.

What this does and does not establish

Established

- Sircel has supplied product into Good360's wider device/digital-access ecosystem.
- Good360 has a real reuse/distribution channel rather than only material recycling.
- Sircel's own FY2023-24 reporting separately documents 2,350 reused assets.

Not established

There is no public document found that says:

"Sircel sent X of its 2,350 reused devices to Good360."

Nor was evidence found saying:

"Sircel devices are sent from Sircel to Compnow for refurbishment."

Compnow and Sircel can both appear in Good360's ecosystem without one being downstream of the other.

That distinction should remain explicit in all Dubbo E-Waste documentation.

4. Compnow's Good360 refurbishment process — step by step

The 2024 Good360/Compnow case study is particularly valuable because it describes the practical workflow rather than just saying "refurbished".

Step 1 — corporate fleet sourcing

Good360 specifically seeks corporate fleets rather than one-off individual devices.

The case study explains why:

- businesses can provide bulk quantities of identical models;
- schools can support and maintain a common device type more easily;
- teachers/students learn on the same platform;
- corporate devices are often higher specification;
- they often leave corporate service before physical end-of-life.

This is highly relevant to Dubbo E-Waste.

Ten same-model ex-business laptops are operationally much better than ten random household laptops.

Step 2 — nationwide collection

Compnow's Lifecycle team collects redundant fleets direct from donor organisations anywhere in Australia.

That means Compnow does not need a Dubbo branch to service a Dubbo corporate donor.

Compnow's current physical locations are:

- Melbourne;
- Adelaide;
- Brisbane;
- Perth;
- Sydney.

No Dubbo Compnow office was found.

Step 3 — secure data erasure

Good360 says corporate donors were concerned about legal/data risk.

Compnow's SustainIT system provides certified data erasure, and Good360 says this capability was essential in persuading businesses to allow equipment to be reused rather than destroyed.

Compnow's broader SustainIT material says:

- all data/identity is cleansed;
- processing is auditable;
- data-destruction certificates are available.

This is the same commercial insight found in the Sircel research:

trusted reuse requires credible data destruction/sanitisation evidence.

Step 4 — physical and cosmetic assessment

The case study says Compnow checks each device for:

- damage;
- scratches;
- wear and tear;
- missing keys.

So "working" is not enough. Presentation and completeness matter for a device intended to support equal access in education.

Step 5 — hardware testing

Named tests in the case study include:

- battery life;
- speakers;
- camera.

The full internal test matrix is not published.

Step 6 — repairs and parts matching

Compnow has multi-brand equipment repair credentials.

The case study specifically says it can:

- replace batteries;
- "mix and match" to maximise the life of devices.

This implies a donor-parts strategy: one marginal device can help make another complete and reliable.

That is directly applicable to a small Dubbo refurb operation.

Step 7 — operating system reinstall

The case study says the operating system is reinstalled after wipe/test.

The published case study specifically refers to Mac/iOS in its worked example; it should not be interpreted as saying Good360 only distributes Apple devices.

Step 8 — missing accessories are sourced

Compnow sources items such as:

- power adapters.

This matters because a donated laptop without a charger is not actually ready for a student.

Step 9 — individual presentation

Each successful laptop is:

- individually boxed;
- labelled;
- delivered to Good360.

Again, this shows the difference between "technically powers on" and deployment-ready.

Step 10 — unsuitable items can still create value

One of the most interesting details in the case study is that unsuitable donated products, such as certain keyboards or VoIP phones, may be on-sold by Compnow and the proceeds transferred to Good360.

So the social model is not necessarily:

every donated object must itself be donated.

It can be:

recover the highest value, then use that value to fund social outcomes.

This is an important possible model for Dubbo E-Waste.

5. Compnow's wider SustainIT business model

Outside the Good360 case study, Compnow's current SustainIT/buy-back material describes this lifecycle:

1. identify end-of-life/unneeded assets;
2. receive an indicative buy-back quote;
3. secure collection;
4. detailed auditable assessment;
5. secure removal of data and identity;
6. formal itemised valuation;
7. supplier payment;
8. refurbish, resell, reuse or recycle.

Compnow says more than 98% of equipment it receives is refurbished/repurposed and less than 2% is recycled.

That is a Compnow company claim across its lifecycle service, not an audited figure for the Good360 partnership specifically.

Why this matters for Dubbo

Compnow demonstrates that reuse can be commercially self-supporting:

- sell high-value devices;
- return value to the asset owner;
- repair worthwhile equipment;
- donate some equipment;
- recycle the tail.

Dubbo E-Waste could use the same logic at much smaller scale.

6. National Device Bank — what it is now

The National Device Bank officially launched on 7 August 2025.

It is a national collaboration between:

- WorkVentures
- Good360 Australia
- Good Things Australia

Its purpose is to keep good corporate/government devices in Australia and put them into productive use rather than allowing all refresh equipment to be exported, shredded or landfilled.

Current recipient model

The NDB says registered not-for-profits can apply.

It does not operate as:

individual person fills out a form and receives a laptop directly.

Instead:

community organisation -> requests devices -> identifies/supports people -> device reaches recipient through trusted local channel

Current device quality benchmark

The NDB's current standard free laptop specification is:

- Intel Core i5 6th generation or higher;
- 8 GB+ RAM;
- 128 GB+ SSD;
- Wi-Fi;
- built-in webcam/microphone;
- minimum 13.3-inch screen.

This is an extremely useful benchmark for Dubbo E-Waste's future social-reuse grade.

It says, effectively:

a donated device should still be useful, not merely technically functional.

Current direct-donation threshold

The NDB's current donor page says it currently accepts contributions of more than 50 devices from private/public organisations.

This means a 20–30-device Dubbo pilot would not currently meet the NDB's published direct corporate donation threshold on its own.

However, WorkVentures' broader CircularIT operation says clients can donate as much or as little of their fleet as they wish and scopes logistics case by case.

So there are two different entry points:

- direct NDB bulk donation: current public threshold >50 devices;
- WorkVentures CircularIT/ITAD engagement: potentially smaller/flexible, subject to commercial/logistics scope.

7. How the National Device Bank is funded

The NDB is not simply "take every computer and give it away".

Industry reporting on the NDB says a subset of donated devices can be commercially sold to help fund the devices provided free to people in need.

This is another version of the cross-subsidy principle:

high-value resale

→ funds

free community devices + refurbishment + logistics + support

That makes the model particularly relevant to Dubbo E-Waste.

A local operation does not need to choose between:

- "business"
- and "charity".

It can potentially use commercial resale to subsidise social reuse.

8. WorkVentures in detail

WorkVentures is the National Device Bank's main technical/refurbishment engine.

Its current CircularIT workflow is unusually transparent.

1. Inventory and assessment

WorkVentures:

- catalogues assets;
- assesses condition;
- assesses residual value.

2. Secure collection

It advertises:

- secure logistics;
- chain of custody;
- secure containers;

- locked transport.

WorkVentures says its logistics partners cover major cities and regional centres nationally.

So Dubbo is geographically within the type of coverage it says it can service, although no specific Dubbo collection was publicly found.

3. Data sanitisation

WorkVentures says:

- storage media is sanitised to standards such as NIST 800-88 or equivalent;
- it uses Blancco to sanitise and grade controlled assets;
- serialised certificates/reporting can be issued;
- media that cannot be securely erased is physically destroyed.

It also says processing operates under ISO 27001-aligned controls and chain-of-custody tracking.

4. Grade/refurbish

Working equipment can be:

- refurbished;
- redeployed;
- resold;
- donated.

Other equipment is sent to responsible recycling.

5. Community delivery

WorkVentures says it can manage:

- logistics;
- onboarding;
- training;
- delivery;
- support;
- verification.

That means the service continues after the bench repair is finished.

6. Reporting

Corporate clients can receive:

- asset tracking;
- data-destruction evidence;

- reuse vs recycling outcomes;
- environmental/impact reporting;
- social-impact information.

This is an excellent template for the records Dubbo E-Waste should build from the start.

9. What happens to WorkVentures failures?

WorkVentures says devices that cannot be reused go through R2-certified recycling partners.

This mirrors the ideal Dubbo hierarchy:

reuse first -> recover value second -> certified recycling last

It is substantially different from sending all retired IT directly to a general recycling cage.

10. WorkVentures support after the device is handed over

The NDB is designed around usable outcomes, not simply shipment counts.

WorkVentures' current NDB material describes:

- operating system/core software preparation;
- recipient identification;
- delivery;
- digital-support material;
- ongoing technical support;
- digital literacy;
- connectivity support.

A specific First Nations NDB pilot support page says those participants receive:

- six-month warranty;
- six months of technical support;
- remote troubleshooting/repair arrangements.

That exact six-month warranty should be treated as evidence for that published pilot, not automatically assumed to apply identically to every NDB distribution.

11. Good360's role inside the NDB

Good360 contributes a different capability from WorkVentures.

It already has a national distribution system connecting donated products with:

- charities;
- schools;
- community organisations.

The NDB describes Good360 as extending reach through a nationwide network of accredited NFPs and logistics partners.

Good360's own digital-device model adds:

- demand aggregation;
- matching;
- distribution;
- partner eligibility;
- recipient stories/impact evidence.

This is why the Good360 layer matters: the difficult question is not only:

"Can we refurbish this laptop?"

It is also:

"Who genuinely needs it, who can safely distribute it, and who can support the person afterward?"

12. Good Things Australia — what it adds

Good Things Australia is the digital inclusion and community-support layer.

It manages a network of more than 4,000 community organisations under its own current reporting.

The NDB also describes a combined partner reach of roughly 6,000 across the founding organisations. These numbers describe different scopes and should not be treated as contradictory.

Good Things' partners deliver:

- one-to-one digital mentoring;
- group training;
- internet/device support;
- digital literacy;
- confidence building;
- connectivity guidance.

Its current programs include:

- Be Connected;
- Digital Sisters;

- Connecting Communities;
- Digital Communities;
- Get Online Week and other grant-supported activity.

This is why the NDB is more sophisticated than a laptop giveaway.

A person can receive:

device + connectivity + skills + trusted local support

rather than a laptop with no idea how to use it.

13. Specific Good Things Australia connections in Dubbo

This is where the research becomes especially relevant.

A. Dubbo Support Center — strongest direct local connection

Good Things Australia explicitly selected Dubbo Support Center as one of the 55 delivery organisations for the Digital Sisters program.

Digital Sisters supports refugee and migrant women to build digital confidence and skills.

Good Things' public grant records also show Dubbo Support Center received:

- \$3,000 — Building Digital Skills targeted round, April 2025;
- \$5,200 — Building Digital Skills Round 3, April 2025;
- \$1,000 — Get Online Week grant, 2025.

That is not a theoretical connection. It establishes that Good Things has already:

- selected the organisation;
- funded it;
- used it for digital inclusion;
- worked with it in postcode 2830.

Charity status

ABN Lookup currently records Dubbo Support Center Incorporated:

- active ABN;
- main business location NSW 2830;
- ACNC registered charity from 8 November 2025;
- Public Benevolent Institution;
- DGR endorsed.

Why this matters for the NSW Device Bank

WorkVentures' NSW Device Bank EOI says:

registered NSW charities/not-for-profits on the ACNC register may request devices or apply as a digital-literacy training provider.

On the published criteria, Dubbo Support Center appears to meet the organisation-level eligibility requirement.

No public evidence was found that:

- it has applied;
- it has been selected;
- it has received NSW Device Bank laptops.

But it is probably the most obvious existing Dubbo bridge into the program discovered in this research.

14. Digital Nebula — another strong Good Things link in Dubbo

Good Things' public grant records show:

Digital Nebula – Dubbo

- \$3,000 Building Digital Skills grant, 2025;
- \$1,000 Get Online Week grant, 2025.

The same Good Things grant round also funded:

- Digital Nebula – Narromine;
- Digital Nebula – Wellington;
- other regional Digital Nebula locations.

This shows a broader regional digital-skills footprint around Dubbo.

Important eligibility distinction

ABN Lookup identifies the entity behind the Digital Nebula business name as:

- The Trustee for Innovative Future Enterprises;
- discretionary trading trust;
- active ABN;
- business names Digital Nebula and Digital IQ Spectrum;
- not shown as an ACNC charity in the ABR record;
- not a DGR.

That does not diminish its demonstrated Good Things digital-skills role.

But based only on the current NSW Device Bank EOI, it does not obviously satisfy the program's published ACNC-registered charity/NFP requirement for requesting devices/training-provider participation.

This would need direct confirmation from WorkVentures/Good Things rather than assumption.

15. NSW Device Bank — the most immediate Dubbo opportunity

The NSW Government launched its 12-month Device Bank pilot in May 2026.

The government says the program will distribute thousands of refurbished laptops across NSW.

Priority cohorts include:

- low-income/socio-economically disadvantaged people;
- First Nations communities;
- seniors;
- people with disability;
- culturally and linguistically diverse communities;
- regional and remote residents.

The package is not only hardware. It includes:

- laptop;
- internet/connectivity;
- digital literacy;
- support.

Delivery model

The public EOI says:

- program is NSW-only during the pilot;
- delivery is through community organisations;
- the general public cannot apply directly;
- registered NSW charities/NFPs on the ACNC register can approach WorkVentures or Good Things to:
- request devices;
- apply as a digital-literacy delivery organisation.

First real rollout

In September 2026, The Place Charlestown publicly reported that it was the first NSW community organisation to participate.

It distributed 30 refurbished laptops to:

- seniors;
- carers;

- people with disability;
- culturally and linguistically diverse community members.

Recipients also received:

- 12 months of free data;
- digital-skills training;
- IT support.

This is an exceptionally useful template for what a Dubbo rollout could look like.

16. No Dubbo Device Bank rollout found — yet

A targeted search for:

- "NSW Device Bank Dubbo";
- "National Device Bank Dubbo";
- WorkVentures + Dubbo;
- Good Things Device Bank + Dubbo;
- Good360 laptop + Dubbo;

did not identify a public Dubbo distribution announcement as of 2 October 2026.

The first publicly identified NSW rollout remains Charlestown.

This means Dubbo may still represent an open opportunity, especially because:

- regional/remote residents are explicit priority cohorts;
- Good Things already has established Dubbo partners;
- Dubbo Support Center now has ACNC charity status.

17. Other concrete evidence that the model is needed and works in Dubbo

A. Services Our Way — refurbished laptop already helping a Dubbo recipient

In June 2026, the Aboriginal Housing Office published a story about more than 90 refurbished laptops distributed to Services Our Way clients.

One named case was a recipient in Dubbo, who said he was using the laptop for:

- Certificate III in Community Services study through TAFE NSW;
- coursework;
- employment goals.

This project is not the National Device Bank and should not be presented as one.

But it provides direct local evidence that:

- refurbished laptops can reach people in Dubbo;
- the devices are useful for study/employment;
- there is a real need beyond theory.

B. Dubbo Regional Council / VERTO Laptop to Launch

Dubbo Regional Council partnered with VERTO on Laptop to Launch, with digital-literacy courses in Dubbo and Wellington.

The courses focused on workplace/digital skills and tools.

Again, this is not a device-donation program, but it proves the region already has complementary training infrastructure.

A future reuse program could pair:

- device supply

with

- existing digital-skills delivery.

18. Existing Good360 connections to Dubbo — beyond laptops

No specific Good360 laptop distribution into Dubbo was publicly found, but Good360 itself is not new to the region.

LeaderLife

Good360's 2021 Annual Report described LeaderLife Limited using Good360 goods in Dubbo, including Back to School/Empower Pack items and community distribution.

Little Wings

Good360 has worked with Little Wings since 2021.

A 2025 Good360 story specifically describes a child from Dubbo supported by Little Wings receiving Good360-donated comfort goods.

This is not a laptop program, but it demonstrates that Good360's member network already reaches Dubbo families.

NSW flood-recovery footprint

NSW Government records show Good360 received \$200,000 under the NGO Flood Recovery Program, with its approved service area including Dubbo among many affected LGAs.

Again, that does not prove digital-device delivery.

It proves Good360 already has a funded regional distribution role that includes Dubbo.

19. Compnow's specific Dubbo connection

No public evidence was found of:

- a Compnow office in Dubbo;
- a named Compnow refurb project in Dubbo;
- a Good360/Compnow laptop distribution specifically identified as Dubbo.

However, the Good360/Compnow case study explicitly says Compnow's Lifecycle team can collect donor fleets from anywhere in Australia.

So a Dubbo business, school or organisation with a qualifying fleet could potentially fit the national logistics model without a local Compnow office.

That is a service-coverage connection, not evidence of an existing Dubbo project.

20. WorkVentures' specific Dubbo connection

No named WorkVentures Dubbo deployment was found.

But there are three concrete reasons it is directly relevant:

1. National regional collection

WorkVentures says its logistics coverage includes most regional areas/centres nationally.

2. NSW Device Bank is explicitly statewide

The government tender listed all NSW regions, and regional/remote residents are a priority group.

3. A qualifying Good Things partner already exists in Dubbo

Dubbo Support Center appears to meet the NSW Device Bank's published organisational eligibility requirement.

So there is a credible chain that could be activated:

NSW Device Bank

→ WorkVentures refurbishment

→ Good Things Australia

→ Dubbo Support Center

→ eligible Dubbo residents

This is a potential pathway based on published eligibility, not a confirmed current arrangement.

21. Good Things Australia's specific Dubbo connection

This is stronger than WorkVentures' or Compnow's local evidence.

Good Things has already directly funded/worked with:

- Dubbo Support Center;
- Digital Nebula – Dubbo.

It has also funded Digital Nebula in nearby:

- Narromine;
- Wellington.

Therefore the local missing piece is not necessarily digital-skills capacity.

The missing piece appears to be connecting the device-supply pipeline with the local partners already doing the skills/support work.

22. What this means for Dubbo E-Waste

There are potentially three roles for a local reuse operation.

Role A — local feeder of business devices

Dubbo E-Waste could source retired fleets from:

- businesses;
- schools;
- professional services;
- community organisations.

Then:

- triage locally;
- retain commercially viable stock where agreements allow;
- potentially aggregate high-quality social-use devices;
- route them into a recognised community device program.

The NDB's current >50-device direct-donation threshold means a very small pilot may need to aggregate devices or work through WorkVentures/Good360 rather than apply as a direct donor.

Role B — local refurbishment partner

This would be more ambitious.

Dubbo E-Waste could eventually ask whether WorkVentures, Good360 or another program needs:

- first-pass local triage;
- charger matching;
- RAM/SSD upgrades;
- cleaning;
- hardware testing;
- local repairs;
- serial-level inventory;
- final-mile deployment support.

There is no current evidence they are seeking a Dubbo subcontractor, so this should be explored rather than assumed.

Role C — local social-reuse + commercial cross-subsidy

The strongest self-controlled model may be:

1. collect good retired IT locally;
2. wipe/test/repair;
3. sell high-value devices commercially;
4. use margin to support lower-value but useful social devices;
5. donate through an ACNC/local service partner;
6. track outcomes;
7. recycle failures.

That mirrors the core economics visible in:

- Compnow;
- Good360;
- National Device Bank;
- WorkVentures.

23. A particularly strong Dubbo pilot concept

"Dubbo Device Reuse Pilot"

Potential structure:

Supply

5-10 local businesses contribute retired laptops.

Dubbo E-Waste

- serial capture;
- ownership transfer;
- secure data wipe;
- test;
- repair/upgrade;
- grade.

Grade A — commercial

Higher-value machines are sold.

Revenue supports:

- parts;
- batteries;
- chargers;
- data-wipe costs;
- social units.

Grade B — social use

Machines meeting a practical minimum such as:

- Windows 11-capable / supportable OS;
- 8 GB RAM;
- SSD;
- webcam;
- good keyboard/display;
- reliable charger/battery;

are prepared for community use.

The NDB's current i5 6th gen / 8 GB / 128 GB SSD / webcam / Wi-Fi benchmark provides a useful external comparison.

Distribution

Partner with a local organisation capable of recipient assessment/support.

The strongest current lead from this research is:

Dubbo Support Center

because it already has:

- Good Things relationship;
- Digital Sisters experience;
- digital-skills grants;
- ACNC charity status.

Support

Coordinate digital mentoring through:

- Dubbo Support Center;
- Good Things resources;
- potentially other established local digital-training organisations.

End-of-life

Units that fail reuse move to the verified e-waste downstream chain.

24. Why commercial resale should not be viewed as contrary to the social model

All three major models researched use some form of value recovery.

Compnow

Buys back assets, refurbishes/resells/reuses them, and recycles failures.

Good360/Compnow

Some unsuitable donated categories can be sold and proceeds returned to Good360.

National Device Bank / WorkVentures

A subset of residual-value equipment can be remarketed to financially sustain free-device distribution.

Therefore a Dubbo model can legitimately say:

We sell some computers so we can save and redistribute more computers.

That is closer to the mature Australian social-enterprise model than attempting to donate every asset regardless of value.

25. Specific questions to ask each organisation

Good360

1. Is Sircel still an active digital-device donor in 2026?
2. How many Sircel devices have entered Good360?
3. Does Compnow refurbish any Sircel-supplied equipment?
4. Can a regional NSW refurbisher become an accredited Good360 refurbishment partner?
5. Is there a minimum fleet size for a Dubbo corporate donor?
6. Can Dubbo E-Waste aggregate equipment from several businesses?
7. Are there current laptop requests from Good360 members in Dubbo/Orana?
8. Is Dubbo Support Center already a Good360 member?

9. Can a local refurbisher supply fully wiped/tested devices and avoid the standard central refurbishment charge?
10. What outcome/reporting data does Good360 require?

Compnow

1. Does SustainIT already collect corporate fleets from Dubbo?
2. What is the smallest economical regional collection?
3. Where would a Dubbo fleet physically be processed?
4. What exact wipe software/standard does the Good360 stream use now?
5. What is the current hardware test matrix?
6. What minimum age/spec goes to Good360 rather than commercial resale?
7. What faults are economically repaired?
8. What happens to devices below Good360 quality but above e-waste value?
9. Does Compnow use local repair partners in regional NSW?
10. Would it use a local Dubbo triage/refurb partner?

National Device Bank / WorkVentures

1. Can a Dubbo organisation aggregate fewer than 50 devices through CircularIT for eventual NDB use?
2. Is the >50 threshold firm for direct NDB donations?
3. What are the current pass/fail and grading criteria?
4. What refurb work occurs at WorkVentures vs subcontractors?
5. Is Dubbo within routine collection coverage and what volume offsets transport cost?
6. Are devices ever refurbished regionally?
7. Can a local Dubbo social enterprise be an approved technical/last-mile partner?
8. What reporting would a regional partner need?
9. Can a donor nominate Dubbo/Orana as the social-impact destination?
10. How are warranty/support obligations handled?

Good Things Australia

1. Has the NSW Device Bank identified a Dubbo rollout site?
2. Has Dubbo Support Center applied or been invited?
3. Which other 2830 network partners are active?
4. Could Dubbo Support Center receive laptops and Digital Nebula deliver complementary skills training?
5. Are there current waitlists/device needs in Dubbo?
6. What recipient cohorts are highest priority locally?
7. Can Dubbo E-Waste join the Good Things network as a technical/social enterprise partner?
8. Can a non-charity refurbisher support an eligible charity's program?
9. What training/reporting requirements apply?
10. Can Good Things help design a Dubbo pilot?

Dubbo Support Center

1. Are clients currently asking for laptops/devices?
2. How many could be placed responsibly over 6-12 months?
3. Has the organisation applied to the NSW Device Bank/NDB?
4. Would it be interested in being the recipient-assessment and digital-support partner for a local reuse pilot?
5. Which cohorts need devices most?
6. Can it handle distribution records and follow-up?
7. What warranty/support would it need from the refurbisher?
8. Would it participate in outcome reporting without exposing recipient privacy?

26. Best evidence-based Dubbo pathway right now

The strongest practical path identified by this research is:

local business retired laptops

↓

Dubbo E-Waste triage / value recovery

↓

secure wipe + test + repair

↓

two streams:

commercial machines

→ resale

→ fund the operation

social-use machines

→ ACNC community partner such as Dubbo Support Center

→ Good Things-style digital support

→ recipient in Dubbo

→ serial-level outcome tracking

with failures going to a verified recycler.

In parallel, Dubbo Support Center could independently investigate becoming a NSW Device Bank distribution site, which would bring refurbished NSW Government laptops into Dubbo even before Dubbo E-Waste has enough supply to run its own social stream.

27. Research limitations

The following are still not proven publicly:

- Sircel device counts supplied to Good360;
- whether Sircel devices specifically go through Compnow;
- any current Good360 laptop delivery in Dubbo;
- a National Device Bank delivery in Dubbo;
- a NSW Device Bank delivery in Dubbo;
- a Compnow refurbishment project physically based in Dubbo;
- a WorkVentures Dubbo refurbishment operation;
- Dubbo Support Center having applied to/been accepted by the NSW Device Bank;
- Digital Nebula's eligibility for NSW Device Bank delivery under the ACNC criterion;
- whether any of these national organisations currently want a Dubbo technical subcontractor.

These should be resolved by direct contact, not inference.

Final conclusion

The national infrastructure Dubbo E-Waste would otherwise have to invent already exists in pieces:

- Compnow shows how to turn ex-corporate laptops into deployment-ready devices.
- WorkVentures shows how to run secure, auditable ITAD and refurbishment at scale.
- Good360 shows how to match devices to trusted community organisations.
- Good Things Australia already has digital-inclusion partners in Dubbo.
- The National Device Bank joins those functions nationally.
- The NSW Device Bank now provides a live government-backed route into regional NSW.

The strongest local discovery is Dubbo Support Center: it is already inside Good Things' digital-inclusion ecosystem and now appears to satisfy the published ACNC eligibility requirement for the NSW Device Bank.

The most useful immediate investigation is therefore not another generic e-waste contact.

It is:

Can Dubbo Support Center + Good Things + WorkVentures bring the NSW Device Bank to Dubbo, and can Dubbo E-Waste become the complementary local reuse/refurbishment/supply layer?
