Matthews Metal Management, InfraBuild and Australian Metal Recycling — Dubbo research

Checked: 2 October 2026 (AEST)

Purpose: establish who currently operates the former Matthews Metal Management yard in Dubbo, what it takes, how it relates to InfraBuild, and whether it could be a downstream outlet or partner for Dubbo eWaste.

Executive finding

The strongest current evidence says the 34 Mountbatten Drive, Dubbo yard is now operated as Australian Metal Recycling (AMR) by Scrap Metal Services Pty Ltd (ABN 51 640 765 091).

However, the history is messy:

- InfraBuild still has a live webpage for “Matthews Metal Management – Dubbo” at the exact same address and phone number.
- OneSteel Recycling Pty Limited (ABN 28 002 707 262), an InfraBuild subsidiary, still has MATTHEWS METAL MANAGEMENT registered as a business name.
- Australian Metal Recycling’s current website calls Dubbo “Formerly Matthews Metal Management” and lists the same yard.
- NSW Police’s Scrap Metal Industry Register dated 19 February 2026 lists Scrap Metal Services Pty Ltd / Australian Metal Recycling, registration SM-0759, with 34 Mountbatten Drive, Dubbo as one of its registered scrap-metal yards, managed by Gordon Matthews.
- A March 2025 regional council tender recorded InfraBuild Recycling (OneSteel Recycling Pty Limited) and Scrap Metal Services Pty Ltd as separate tenderers. That is strong evidence they are separate legal/business operators, not merely two brands of the same company.

Best interpretation: the former Matthews regional yards (including Dubbo) have transitioned to the independent Australian Metal Recycling operation run by the Matthews family, while InfraBuild still owns/uses the Matthews Metal Management business name and has some legacy branch pages online. The exact asset-sale/lease/transition agreement and date were not found in public sources.

1. Current Dubbo yard

Australian Metal Recycling (current evidence)

Address: 34 Mountbatten Drive, Dubbo NSW 2830

Phone: (02) 6882 1033

General phone: 1300 267 767

Scrap Metal Licence/registration: SM-0759

AMR currently lists Dubbo as one of seven NSW yards. Its contact page labels Dubbo “Formerly Matthews Metal Management.”

AMR states that:

- all its yards accept ferrous and non-ferrous metals;
- e-waste is recycled for free;
- free drop-off is offered for scrap steel, whitegoods and electrical waste;
- its definition of e-waste includes household appliances, computers, keyboards, monitors, printers, fax machines, copiers and related electrical/electronic equipment containing metal;
- commercial customers are serviced through bins, site consultations and tailored servicing;
- household collection and farm/property clean-up services are offered;
- lithium batteries are listed among materials not accepted.

AMR says it pays for aluminium, copper, brass, lead, cars, stainless steel, batteries, radiators and electric motors; it does not say it pays for e-waste. Its services page places e-waste in the free recycling category.

Hours — conflicting

- Current local business listing: approximately Mon-Fri 8:00am-4:00/4:30pm, Sat/Sun closed.
- AMR's website footer says Mon-Fri 7:30am-4:00pm as a general company hours statement.
- The old InfraBuild Matthews Dubbo page says Mon-Fri 8:00am-4:30pm, Sat/Sun closed.

Action: call (02) 6882 1033 before relying on hours.

2. What AMR will and will not take

Current AMR website — accepted

- aluminium
- copper
- brass
- scrap steel
- radiators
- electric motors (drained of oil)
- non-lithium batteries
- stainless steel
- car bodies
- electronic waste
- tin
- roofing iron
- aluminium window frames (no glass)
- Colorbond fencing
- insulated wire
- tap fittings
- whitegoods/fridges via free recycling/drop-off pages

Current AMR website — explicitly not accepted

- asbestos
- bio-waste

- timber
- flammable liquids
- gas bottles
- radioactive waste/material
- poison
- pressure vessels
- mattresses
- non-metallic refuse
- tyres
- lithium batteries

E-waste categories explicitly supported on AMR's current website

AMR's current materials list says electronic waste excluding lithium ion and explicitly includes:

- TVs
- computers / laptops
- monitors
- smart phones / tablets
- printers / scanners
- household appliances and other electrical/electronic equipment containing metal

This supersedes older third-party category lists at the company-policy level.

Still unknown / must call

AMR's current pages do not clearly answer:

- whether CRT TVs/monitors are included in the general "TVs"/"monitors" categories
- whether lithium batteries must be removed from laptops, phones and tablets before drop-off
- whether devices with embedded, non-removable lithium batteries are accepted
- loose PCBs
- mixed unsorted e-waste
- smashed or incomplete electronics
- devices with embedded lithium batteries
- whether batteries must be removed from laptops/phones before drop-off
- commercial volume limits
- whether Dubbo specifically accepts all categories advertised nationally
- whether collection is free for a small commercial operator
- whether a minimum pickup quantity applies
- whether AMR supplies certificates/weights/destruction or recycling reports
- whether data-bearing devices are shredded, dismantled, exported or sent to another processor

3. Important correction to earlier research

An older Business Recycling directory listing for Matthews stated no TVs, CRT monitors or printers were accepted.

That should no longer be treated as current policy because:

- the operator/branding appears to have changed;
- AMR's current official website explicitly lists TVs, computers/laptops, monitors, smart phones/tablets and printers/scanners as e-waste;
- the old directory is secondary and warns users to confirm details directly.

The remaining category ambiguity is narrower: CRT-specific acceptance and how AMR applies its "excluding lithium ion" rule to whole devices containing batteries.

4. Legal entity and registration trail

Scrap Metal Services Pty Ltd / Australian Metal Recycling

Australian Business Register:

- Entity: SCRAP METAL SERVICES PTY LTD
- ABN: 51 640 765 091
- Active since 7 May 2020
- GST registered
- Main business location: NSW 2830
- Business name AUSTRALIAN METAL RECYCLING registered from 2 April 2025

NSW Police Scrap Metal Industry Register, 19 February 2026:

- Business: Scrap Metal Services Pty Ltd
- Registration: SM-0759
- Registration date: 24 June 2025
- ABN: 51 640 765 091
- Registered business names include Australian Metal Recycling
- Registered yards include 34 Mountbatten Drive, Dubbo NSW 2830
- Manager shown for the Dubbo yard: Gordon Matthews

This is the strongest official evidence found for the current Dubbo yard operator.

5. InfraBuild / OneSteel relationship

InfraBuild's recycling business is legally tied to OneSteel Recycling Pty Limited, ABN 28 002 707 262.

Evidence:

- The Australian Business Register says OneSteel Recycling Pty Limited is active and has MATTHEWS METAL MANAGEMENT as a registered business name from 12 November 2019.
- A July 2026 SIRA notice lists OneSteel Recycling Pty Limited (ABN 28 002 707 262) as a wholly owned employing subsidiary in the Liberty InfraBuild group.
- InfraBuild's own recycling page says it operates 22 Australian scrap-metal recycling sites and handles about 1.4 million tonnes of recycled metal annually.
- InfraBuild still hosts a branch page titled Matthews Metal Management – Dubbo, showing 34 Mountbatten Drive, (02) 6882 1033 and recycling@infrabuild.com.

Why the InfraBuild Dubbo page looks stale

The current AMR website and the NSW Police register point to AMR/Scrap Metal Services at the Dubbo yard in 2026. The InfraBuild page was indexed from older material and does not explain the later AMR transition.

Do not assume the InfraBuild email address or ownership of the Dubbo yard is current merely because the legacy page remains online.

6. Matthews history / return to independent operation

AMR's own site says John and Gordon Matthews were the original owners of Matthews Metal Management, built the regional business, transitioned it to InfraBuild, and later returned with Australian Metal Recycling.

This is company-provided history, not an independently verified sale chronology.

A useful corroborating clue is a March 2025 regional waste tender. It listed:

1. InfraBuild Recycling (legal name OneSteel Recycling Pty Limited), ABN 28 002 707 262
2. Scrap Metal Services Pty Ltd, ABN 51 640 765 091

as separate bidders for scrap metal, batteries and optional e-waste services.

That strongly supports the conclusion that by March 2025 Scrap Metal Services/AMR and InfraBuild Recycling were separate organisations.

7. Council / government references to Matthews in Dubbo

Dubbo Regional Council 2025-2035 Waste Strategy

Council's strategy lists:

- scrap metal infrastructure: InfraBuild
- e-waste infrastructure: Matthews Metals, Dubbo

Its contract table lists:

- InfraBuild: collection of steel, RFQ conducted annually
- Matthews Metals: collection of e-waste, commencement 30 June 2023, expiry 30 June 2025

This is important historical evidence, but it does not establish the post-June-2025 contract.

June 2025 Wellington Waste Facility PIRMP

Dubbo Regional Council's 24 June 2025 Pollution Incident Response Management Plan lists:

- Matthews Metal
- service: Scrap metal & E-Waste Recycling
- phone: (02) 6882 1033

The document says this supplier/support list should be verified at least annually and updated when organisations change.

NSW Planning regional study

A NSW planning study published in late 2025 says regional specialty streams included:

- scrap metal processed by InfraBuild

- e-waste processed by Matthews Metals in Dubbo

This likely reflects the established Council pathway around the 2024-25 period. It does not resolve whether AMR took over the same e-waste role after the business transition.

Current Council contract after 30 June 2025

Not found. Searches of Council's 2026 public pages did not reveal a clear award or current contract naming AMR, Matthews or InfraBuild for e-waste after 30 June 2025.

8. What this means for Dubbo eWaste

AMR is potentially a much better downstream lead than the earlier research suggested.

Potential fit

- local Dubbo yard
- current operator says e-waste is accepted free
- commercial customers explicitly supported
- TVs, computers/laptops, monitors, smart phones/tablets and printers/scanners explicitly listed as e-waste
- accepts metal and non-lithium batteries
- may collect depending on job/volume
- same regional operator family historically involved in Council e-waste processing

Limits

- AMR is fundamentally a metal recovery business, not shown as a refurb/resale partner.
- No evidence found that it will pay for mixed e-waste.
- No evidence found that it provides data destruction suitable for business clients.
- Lithium batteries are explicitly not accepted, and the rule for whole devices containing lithium-ion batteries is not explained.
- CRT-specific acceptance is unresolved even though TVs and monitors generally are listed as accepted.
- No evidence found of current AS/NZS 5377 certification or NTCRS co-regulatory arrangement in the material searched.
- No public evidence found showing the exact downstream recycler/process used for Dubbo e-waste.

Best proposed relationship

For Dubbo eWaste, treat AMR as a candidate downstream sink for zero-value metal/electrical material, not as the primary source of profit.

Ask whether Dubbo eWaste can:

1. deliver sorted, zero-value computer/electrical scrap free;
2. separate batteries first;
3. send printers, monitors and desktops/laptops;
4. confirm whether CRT TVs/monitors are accepted and whether lithium batteries must be removed from laptops/phones/tablets;
5. receive a weight docket or recycling receipt;
6. arrange collection once enough volume is accumulated;
7. get a commercial account/bin without minimum monthly volume.

9. Exact call script

Call (02) 6882 1033:

Hi, I'm setting up a very small electronics refurbishment and reuse operation in Dubbo. I'll keep and resell anything repairable, but I need a legitimate downstream outlet for the zero-value remainder.

I saw Australian Metal Recycling lists e-waste as free to recycle and the Dubbo yard at 34 Mountbatten Drive. Can I bring small commercial loads of sorted computers and electrical gear to you?

Your website currently lists TVs, computers/laptops, monitors, smart phones/tablets and printers/scanners as e-waste, but says electronic waste excludes lithium ion. Does the Dubbo yard follow that list for small commercial loads?

Do lithium batteries need to be removed from laptops, phones and tablets first? Do you accept CRT TVs/monitors, loose circuit boards and power supplies/cables?

Is there any fee, minimum quantity, or business-account requirement? Can you provide a weight docket or recycling receipt, and at what volume would you collect from me instead?

Then ask:

Are you now Australian Metal Recycling rather than InfraBuild/Matthews Metal Management at this yard? I'm seeing both names online and want to make sure I record the current legal operator correctly.

11. Downstream-process deep dive

The detailed trace of what happens after Dubbo accepts TVs, computers, monitors, phones/tablets and printers is now in WHAT-HAPPENS-TO-EWASTE.md (WHAT-HAPPENS-TO-EWASTE.md).

Key finding: AMR does not publicly identify the downstream e-waste processor used by Dubbo. The evidence supports treating Dubbo primarily as a receiving/sorting/consolidation/logistics point until AMR confirms otherwise. The new note separates AMR-confirmed facts from NTCRS/MobileMuster industry benchmarks and lists the exact questions required to build a real chain-of-custody map.

12. Remaining unknowns

- exact legal transaction/transition from InfraBuild/Matthews to AMR at Dubbo
- exact date AMR took operational control of 34 Mountbatten Drive
- post-30-June-2025 Dubbo Regional Council e-waste contract
- CRT-specific acceptance
- how "electronic waste excluding lithium ion" applies to laptops/phones/tablets with embedded batteries
- commercial volume limits and pickup minimums
- weight/recycling certificates
- downstream processor and final destination
- AS/NZS 5377 certification / NTCRS status for the Dubbo operation
