Greenbox, EraseIT, Sims Lifecycle Services and Renew IT: size and Dubbo coverage

Research checked 2 October 2026. This report answers the four-company comparison and records what their advertised processes do with retired devices. It complements the major-player market map (AUSTRALIAN-EWASTE-ITAD-MAJOR-PLAYERS.md), Dubbo disposal prospects (DUBBO-DEVICE-DISPOSAL-PROSPECTS.md) and local independent-operator investigation (DUBBO-INDEPENDENT-DEVICE-RECOVERY-OPERATORS.md).

Findings

These are substantial operators, but Greenbox and EraseIT now belong to the same group: Greenbox's acquisition was announced in 2025. Counting them as four independent competing groups would overstate the field. [N03-N04; EVD-ITAD-003]

None of the four lists a Dubbo facility in the location sources reviewed. Greenbox advertises national service capacity, and Renew IT explicitly advertises collections anywhere in Australia. Both include Dubbo geographically in their advertised scope; a particular pickup, price or turnaround in postcode 2830 still needs a quote. For EraseIT and SLS, their networks make a Dubbo job plausible, but no named Dubbo customer, regular local route or binding service commitment was established. This distinction matters when assessing actual competition. [N01-N02, N06, N08, N11-N12; EVD-ITAD-008-009, 015]

Operator | Best supported scale measure | Geographic footprint relevant to Dubbo | What is still unknown

Greenbox | Its FAQ advertises over 100 full-time employees across Australia and New Zealand. This is an undated website figure, not a verified post-acquisition combined headcount. | Contact page lists four Australian locations: Brisbane, Sydney, Canberra/Queanbeyan and Melbourne; plus Auckland, Christchurch and Wellington in NZ. Sydney is at Arndell Park. FAQ advertises national service capacity. | Current group revenue, combined staff and annual throughput; actual Dubbo collection terms.

EraseIT | Wholly owned Greenbox subsidiary. No reliable current standalone revenue, staff or throughput figure found. | Current contact is care of Greenbox at Campbellfield, Victoria. An asset-collection request form accepts a collection address and postcode. | Separate operating scale and which network/facility would fulfil a Dubbo job.

Sims Lifecycle Services (SLS) | Parent's FY26 results report A\$757.0 million SLS sales revenue, A\$172.7 million underlying EBIT and 16.8 million repurposed units processed worldwide. | SLS's location directory lists Australian centres in Villawood, Sydney, and Cranbourne West, Melbourne, within a global network. | Australian/Dubbo share of those totals; local contract, batch minimum and transport price.

Renew IT | Company LinkedIn gives a broad 51–200 employee band. Official site describes a 70,000 sq ft Sydney facility (about 6,500 m²). Partner The Missing Link advertises more than 500,000 assets annually across six R2v3-certified facilities. These are differently scoped promotional measures, not audited comparable financials. | Official international/contact information includes Lane Cove West, NSW; Canning Vale, WA; Dandenong South, VIC; and overseas locations. Services page advertises Australia-wide collection. | Current revenue, exact staff and period/scope behind the partner's volume claim; confirmed Dubbo quote.

Sources for scale: N01-N04, N07-N11, N13. Evidence: EVD-ITAD-001-007.

The SLS unit count includes component/data-centre activity; it does not mean 16.8 million whole laptops. Sims Limited's wider group revenue and Sims Metal's facility counts should not be attributed to SLS. Nor does the evidence establish a defensible worldwide number-one ranking. SLS has the clearest quantified scale disclosure among these four; private-company disclosure gaps prevent a like-for-like ranking.

What happens to the equipment?

Operator | Advertised route for retired devices | Where the public evidence stops

Greenbox | Collection and asset recording; sorting/testing; data sanitisation or physical destruction; then reuse, remarketing or material recycling. Its lifecycle page lists both onsite and offsite sanitisation/destruction options. | The page describes available services, not the actual disposition of a particular Dubbo consignment. [N05; EVD-ITAD-010]

EraseIT | Sanitises and cleans saleable hardware, then sells through Australian/international brokers and wholesale dealers. Also offers a tested staff-purchase programme with warranty. Separate services cover redeployment and disposal. | No Dubbo customer's destinations, resale split or final recycler established. [N14; EVD-ITAD-011]

SLS | Asset recovery/resale is a distinct service. Its recycling explanation covers dismantling and recovery of materials when equipment is obsolete. Data-centre services include decommissioning, data destruction and resale/recycling. | Global process descriptions do not trace equipment collected from Dubbo, or show the reuse/recycling percentage for a local job. [N15-N17; EVD-ITAD-012]

Renew IT | Bulk asset buyback from organisations; collection; serial-number reporting; data erasure on request with a certificate; reuse, with recycling for unsuitable equipment. It advertises retention of drive-destruction records for ten years. | Do not assume data erasure is included in every purchase: its page says it is provided on request. The page does not establish the final recycler or price for a Dubbo load. [N12; EVD-ITAD-009, 013]

Corrections to the initial descriptions

- EraseIT's historical "first" claim is specific: first Australian-owned ITAD provider to join the secure-destruction association NAID. Membership, certification and inventing a certification are different claims. The linked announcement supports the membership claim. [N18; EVD-ITAD-014]
- Greenbox explicitly says its four Australian facilities are DISP-approved. This is stronger than a generic military-grade slogan, but it remains a company statement here: current accreditation levels/site scope and approval for a particular defence contract were not independently checked. [N01, N05; EVD-ITAD-016]
- EraseIT's ownership is current; older location text is inconsistent. Its about page retains Tullamarine text, while current contact details give Campbellfield care of Greenbox. Use the current contact for routing and confirm the operating facility for a job. [N04, N06]
- Renew's annual asset figure is a partner claim, not a reported financial-year result. Do not turn it into a device count for Dubbo or compare it directly with SLS's component-inclusive unit metric. [N07, N13]

Implications for the Dubbo project

Interpretation: the nationals are credible competitors for centrally procured enterprise, government and data-centre work. That does not establish that they currently win any of the specific 14 local prospect accounts (DUBBO-DEVICE-DISPOSAL-PROSPECTS.md).

A local collector could investigate a logistics/referral relationship as well as direct competition. Greenbox advertises partner arrangements and SLS describes an international subcontractor network. Neither is proof of an available Dubbo appointment. [N08, N19]

The useful qualification questions are: will you collect in postcode 2830; what equipment and minimum batch qualify; who transports it and under whose custody records; which facility receives it; what data work/reporting is included; how is resale value shared; and can a local business aggregate or refer loads? These are proposed questions, not an agreed partnership or prices. No companies were contacted for this research. This report changes no launch-gate status in CURRENT-STATE.md (CURRENT-STATE.md).
