

Open Repair Alliance - Open Repair Data Standard

Source type: External primary-source research brief

Category: Repair data / measurement

Primary source: <https://openrepair.org/open-data/open-standard/>

Source checked: 6 October 2026

Source summary

The Open Repair Data Standard (ORDS) defines a common structure for recording community electronics repair attempts. Version 0.3 groups data into product, repair and session information, including product category, brand, age, problem, repair status, repair barrier, event date and group identifier. Using compatible fields would make a Dubbo repair initiative easier to measure and compare with wider repair data.

Why this matters for Dubbo eWaste

A strong basis for AssetFlow fields and Repair Cafe reporting, especially if Dubbo wants evidence about common faults, successful repairs and barriers.

Source handling note

This PDF is an original research brief prepared for the NotebookLM pack. It summarises the linked source and does not reproduce the source publication in full. Re-check the linked primary source before relying on time-sensitive legal, regulatory, pricing or operational details.
